#### **Important note:**

Medicine is an ever-changing science, so the contents of this publication, especially recommendations concerning diagnostic and therapeutic procedures, can only give an account of the knowledge at the time of publication. While utmost care has been taken to ensure that all specifications regarding drug selection and dosage and treatment options are accurate, readers are urged to review the production information sheet and any relevant material supplied by the manufacturer, and, in case of doubt, to consult a specialist. The publisher will appreciate being informed of possible inconsistencies. The ultimate responsibility for any diagnostic or therapeutic application lies with the reader.

No special reference is made to registered names, proprietary names trademarks, etc. in this publication. The appearance of a name without designation as proprietary does not imply that it is exempt from the relevant protective laws and regulations and therefore free for general use.

This publication is subject to copyright, all rights are reserved, whether the whole or part of the material is concerned. Any use of this publication outside the limits set by copyright legislation, without the prior written permission of the publisher, is liable to prosecution.

# Contents

## 1 General Symptoms ..... 3

Obesity .....	4
Anaemia.....	5
Abdominal Pain .....	8
Abdominal Distention.....	12
Bite and Scratch Wounds.....	17
Tendency to Bleed.....	17
Pyrexia and Hyperthermia.....	21
Hypothermia.....	24
Icterus/Jaundice .....	25
Infections, Recurrent .....	29
Performance Insufficiency .....	31
Lymph Node Enlargement, Peripheral .....	38
Oedema, Subcutaneous.....	40
Sleep Disturbances .....	41
Mucous Membrane Colour, Abnormal .....	43
Shock.....	43

## 2 Cardiovascular Principal Symptoms ..... 47

Cardiac/Respiratory Arrest .....	47
Heart Murmurs.....	49
Cardiac Arrhythmias .....	52
Heart Sounds, Pathological.....	56
Cardiomegaly.....	58
Hypertension, Arterial.....	61
Pulse Alterations.....	63
Syncope .....	64
Pericardial Effusion .....	66
Thromboembolism, Arterial.....	66
Cyanosis.....	68

**3 Respiratory Principal Symptoms .....71**

Respiratory Sounds .....	71
Dyspnoea .....	75
Pulmonary Oedema .....	78
Pulmonary Thromboembolism .....	79
Pleural Effusion .....	79
Pneumothorax .....	80
Cough .....	82
Lung Sounds .....	86
Nasal Discharge.....	88
Epistaxis .....	92
Reverse Sneezing.....	95

**4 Gastrointestinal Principal Symptoms .....97**

Anal Pruritus.....	98
Diarrhoea.....	99
Dysphagia .....	103
Stomatitis .....	104
Vomitus .....	108
Motility Disturbances .....	109
Haematemesis .....	112
Copremesis .....	113
Emaciation .....	114
Hypersalivation .....	117
Coprophagia .....	121
Faeces, bloody.....	122
Rectal Tenesmus .....	125
Faecal Incontinence .....	127
Meteorism/Flatulence .....	129
Halitosis .....	132
Constipation .....	135
Polyphagia .....	138
Regurgitation.....	141

**5 Urological Principal Symptoms .....143**

Urine, Bloody.....	143
Urinary Urgency.....	147
Urinary Incontinence and Retention.....	150
Urinary Tract Infections, Chronic Recurrent .....	153

Oliguria/Anuria .....	154
Polydipsia/Polyuria .....	157
Renomegaly .....	160
<b>6 Principal Symptoms of the Reproductive Tract .....</b>	<b>162</b>
Miscarriage/Foetal Death .....	162
Fertility Disorders.....	164
Dystocia.....	167
Testicular Enlargement.....	169
Mammary Discharge .....	170
Mammary Enlargement.....	171
Penile Prolapse.....	173
Postpartal Complications .....	174
Preputial Discharge .....	176
Vaginal Discharge .....	179
Vaginal Prolapse.....	181
Abnormal Cycle.....	182
<b>7 Neurological Principal Symptoms .....</b>	<b>184</b>
Ataxia .....	184
Hearing Loss/Deafness .....	191
Coma.....	193
Head Tilt .....	196
Nystagmus .....	199
Seizures.....	200
Paralysis .....	204
Tremor .....	212
<b>8 Orthopaedic Principal Symptoms.....</b>	<b>216</b>
Lameness of the fore limb.....	216
Lameness of the hind limb.....	221
Lameness of multiple limbs.....	225
<b>9 Ophthalmological Principal Symptoms.....</b>	<b>230</b>
Anisocoria.....	230
Ocular Discharge .....	233
Reddening of the Eye .....	234
Cataract .....	238

Enophthalmos/Exophthalmos .....	241
Prolapse of the Nictitating Membrane .....	243
Loss of Eyesight/Blindness .....	244
Strabismus .....	248
<b>10 Otological Principal Symptoms .....</b>	<b>250</b>
Aural Discharge.....	250
<b>11 Dermatological Principal Symptoms .....</b>	<b>253</b>
Hair Loss.....	253
Pruritus .....	255
Dermal Efflorescences .....	257
Topographic Distribution Pattern of Skin Diseases .....	261
<b>12 Toxocological Principal Symptoms .....</b>	<b>266</b>
Miscarriage.....	267
Anaemia, Aplastic.....	267
Anaemia, Haemolytic.....	268
Anaemia/Methaemoglobinæmia.....	268
Anaphylaxis .....	269
Ataxia .....	269
Respiratory Distress/Dyspnoea .....	270
Coagulopathies .....	271
Intestinal Spasms .....	272
Vomitus.....	272
Vomitus and Diarrhoea.....	273
Hair Loss .....	274
Skin Reactions, Allergic.....	274
Cardiac Arrhythmias, Bradycardic .....	275
Cardiac Arrhythmias, Tachycardic .....	276
Hypersalivation.....	276
Coma .....	277
Seizures .....	277
Hepatic Damage .....	279
Miosis.....	280
Mydriasis .....	280
Renal Damage.....	280
Paresis/Paralysis .....	281
Tremor.....	281

---

Central Nervous Depression .....	282
Central Nervous Excitation .....	283
Cyanosis .....	283
<b>13 Behavioural Disorders.....</b>	<b>285</b>
Aggression .....	285
Allotriophagia .....	285
Fearfulness .....	286
Automutilation .....	286
Barking, Continuous.....	286
Micturition Problems .....	287
Hypersexuality/Nymphomania .....	287
Infanticide.....	287
Personality Change .....	287
<b>14 Paediatrics.....</b>	<b>288</b>
Cardiac Diseases.....	289
Respiratory Diseases.....	289
Gastrointestinal, Liver and Pancreatic Diseases .....	289
Urinary Tract Diseases .....	290
Muscular/Bone Diseases.....	290
Skin Diseases.....	291
Central Nervous Diseases .....	292
Spinal Diseases .....	292
Ocular Diseases .....	293
Infectious Diseases.....	293
Metabolic Diseases .....	298
Immune System Diseases.....	299
Coagulopathies .....	299
<b>15 Geriatrics.....</b>	<b>301</b>
Cardiac Diseases.....	302
Respiratory Diseases.....	302
Gastrointestinal Diseases .....	303
Hepatic/Exocrine Pancreatic Diseases .....	304
Urinary Tract Diseases .....	304
Blood/Splenic Diseases .....	305
Metabolic Diseases .....	305
Central Nervous Diseases .....	305

Spinal Diseases .....	306
Bone/Muscular Diseases.....	306
Ocular Diseases.....	307
Reproductive Tract Diseases .....	307

Sabiene, Noona and Philipp

# Foreword

---

This book arose out of frustration – as a new vet you may find yourself working on your own and feeling helpless when presented with a bleeding patient. There is no reference manual available that can help you quickly orientate yourself and find possible different diagnoses easily.

I hope that I can spare a lot of my colleagues this frustration and here welcome the 3rd edition. My thanks go to Mr Alexander Hüttig, Dr. Steven Kellner, Dr. Bärbel Löblich-Beardi, Dr. Meinhard Maurer, Prof. Dr. Roland Rudolph, Ms Antje Stolle-Malorny, Mr PD Dr. Günter Wilsdorf and Dr. Karl-Heinz Kirschstein for their altruistic and committed co-operation with this project.

My thanks also go to Schattauer Publishers, in particular to Mr Dipl.-Psych. Dr. med. Wulf Bertram but also to all members of staff who made the realisation of this project possible.

Berlin, February 2014.

Dr. med. vet. Christian F. Schrey

# List of Abbreviations

<b>αHBDH</b>	Alpha-Hydroxybutyrate Dehydrogenase
<b>ACTH</b>	Adrenocorticotropic hormone
<b>ADH</b>	Antidiuretic hormone
<b>Alb</b>	Albumin
<b>Amyl</b>	Amylase
<b>ANA</b>	Antinuclear antibodies
<b>ANP</b>	Atrial Natriuretic Peptide
<b>ANTU</b>	Alpha Naphtylthiourea
<b>AP</b>	Alkaline Phosphatase
<b>ARVC</b>	Arrhythmogenic right ventricular Cardiomyopathy
<b>ASD</b>	Atrial Septal Defect
<b>AV-Block</b>	Atrioventricular Block
<b>BAERA</b>	Brain-auditory-evoked-response Audiometry
<b>BE</b>	Bacterial Examination
<b>BG</b>	Blood Glucose
<b>BGA</b>	Blood Gas Analysis
<b>Bili</b>	Bilirubin
<b>BNP</b>	Brain Natriuretic Peptide
<b>BSR</b>	Blood Sedimentation Rate
<b>BW</b>	Body weight
<b>Ca</b>	Calcium
<b>CAV-1</b>	Canines Adenovirus-1
<b>CEA</b>	Collie Eye Anomaly
<b>CGH</b>	Congenital Hypothyroidism
<b>Chol</b>	Cholesterol
<b>CLAD</b>	Canine Leucocyte Adhesion Deficiency
<b>CN</b>	Cranial nerve
<b>CNS</b>	Central Nervous System
<b>CPSE</b>	Canine Prostate-Specific Arginine Esterase
<b>Crea</b>	Creatinine
<b>CRP</b>	C-reactive Protein
<b>CS</b>	Cervical Spine
<b>CSNS</b>	Congenital stationary night blindness
<b>CT</b>	Computed tomography
<b>DCMP</b>	Dilated cardiomyopathy

<b>DEA</b>	Dog Erythrocyte Antigen
<b>DEET</b>	Diethyltoluamide
<b>DIC</b>	Disseminated intravasal coagulation (Consumptive coagulopathy)
<b>Diff BC</b>	Differential Blood Count
<b>DM</b>	Degenerative Myelopathy
<b>ECG</b>	Electrocardiogram
<b>EEG</b>	Electroencephalogram
<b>EF</b>	Episodic Falling
<b>EIC</b>	Exercise Induced Collapse
<b>ELISA</b>	Enzyme-linked immunosorbent assay
<b>ENM</b>	Hereditary Necrotising Myelopathy
<b>EME</b>	Eosinophilic meningoencephalitis
<b>EMG</b>	Electromyogram
<b>Eos</b>	Eosinophil granulocytes
<b>Erys</b>	Erythrocytes
<b>FDP</b>	Fibrin Degradation Products
<b>FeLV</b>	Feline Leukaemia virus
<b>FIP</b>	Feline Infectious Peritonitis
<b>FIV</b>	Feline Immunodeficiency virus
<b>FLUTD</b>	Feline Lower Urinary Tract Disease
<b>FORL</b>	Feline Odontoclastic Resorptive Lesions
<b>FUS</b>	Feline Urological Syndrome (previously used term, now FLUTD)
<b>GGT</b>	Gamma-Glutamyl Transferase
<b>Glob</b>	Globulin
<b>GME</b>	Granulomatous meningoencephalitis
<b>GnRH</b>	Gonadotropin Releasing Hormone
<b>GOT/AST</b>	Glutamate Oxaloacetate Transaminase/Aspartate Aminotransferase
<b>GPT/ALT</b>	Glutamate-Pyruvate Transaminase/Alanine Aminotransferase
<b>Hb</b>	Haemoglobin
<b>HCG</b>	Human Chorionic Gonadotropin
<b>HCMP</b>	Hypertrophic cardiomyopathy
<b>Hct</b>	Haematocrit
<b>HNPK</b>	Hereditary Nasal Parakeratosis
<b>IGF-1</b>	Insulin-Like Growth Factor
<b>IGS</b>	Imerslund-Gräsbeck Syndrome
<b>JEB</b>	Junctional Epidermolysis Bullosa
<b>K</b>	Potassium

---

<b>LDH</b>	Lactate dehydrogenase
<b>LE-Cells</b>	Lupus erythematosus cells
<b>Leuc</b>	Leucocytes
<b>LMN</b>	Lower motor neuron
<b>LS</b>	Lumbar spine
<b>Lympho</b>	Lymphocytes
<b>MCH</b>	Mean corpuscular haemoglobin
<b>MCHC</b>	Mean corpuscular haemoglobin concentration
<b>MCV</b>	Mean corpuscular volume
<b>Mg</b>	Magnesium
<b>Mono</b>	Monocytes
<b>MRT</b>	Magnetic resonance tomography
<b>N</b>	Normal Finding
<b>Na</b>	Sodium
<b>Neutro</b>	Neutrophil granulocytes
<b>NSAID</b>	Non-steroidal anti-inflammatories
<b>P</b>	Phosphate
<b>PDA</b>	Patent ductus arteriosus
<b>PNS</b>	Peripheral nervous system
<b>PT</b>	Prothrombin Time
<b>PTT/aPTT</b>	(Activated) partial Thromboplastin Time
<b>RI</b>	Reticulocyte Index
<b>SA-Block</b>	Sinoatrial-Block
<b>SARD</b>	Sudden acute retinal detachment/Atrophy
<b>SIADH</b>	Syndrome of inappropriate ADH secretion
<b>STH</b>	Somatotropin Hormone
<b>TBE</b>	Tick borne encephalitis
<b>TLI</b>	Trypsin-like immunoreactivity
<b>TP</b>	Total Proteine
<b>TRH</b>	Thyrotropin-releasing Hormone
<b>Trigl</b>	Triglycerides
<b>TSH</b>	Thyroid Stimulating Hormone
<b>UMN</b>	Upper motor neuron
<b>Urea</b>	Urea
<b>Vit</b>	Vitamin
<b>VSD</b>	Ventricular Septal Defect
<b>WPW</b>	Wolff-Parkinson-White Syndrome

# How to Use this Book

This book is a reference manual for the small animal vet in clinical practice offering differential diagnoses for common symptomatic presentations.

Principal symptoms and findings are individually listed and the differential diagnoses are in order of the most common and sorted into different species.

## Principal Symptom/Finding

### Definition

#### Most Common Causes

Dog	Cat
+++ Listing in decreasing order frequency	+++ Listing in decreasing order of frequency

#### Classification of the different causes

- Most common differential diagnoses in the dog and/or in the cat
- Rare differential diagnoses in the dog and/or in the cat
- (non-endemic pathogen in UK)

A suggestion of diagnostic approaches will follow each principal symptom with recommendations of tests in order of declining priority.

## Diagnostic Approach

### *Principal Symptom*

#### 1. Case History

- First Choice Examination Parameters (Basic Diagnostics)

#### 2. General Examination

- Second Choice Examination

#### 3. Blood Tests

- Parameters (Further Diagnostics)

# 1 General Symptoms

---

Obesity .....	4
Anaemia .....	5
Abdominal Pain .....	8
Abdominal Distention .....	12
Bite and Scratch Wounds.....	17
Tendency to Bleed .....	17
Pyrexia and Hyperthermia .....	21
Hypothermia .....	24
Icterus/Jaundice.....	25
Infections, recurrent.....	29
Performance Insufficiency.....	31
Lymph Node Enlargement, peripheral .....	38
Oedema, subcutaneous .....	40
Sleep Disturbances.....	41
Mucous Membrane Colour, abnormal .....	43
Shock .....	43

## Further Relevant Principal Symptoms

Cyanosis (Ch. 2: Cardiovascular Principal Symptoms).....
Weight Loss (Ch. 4: Gastrointestinal Principal Symptoms) .....
Polyphagia (Ch. 4: Gastrointestinal Principal Symptoms).....
Polydipsia/Polyuria (Ch. 5: Urological Principal Symptoms).....

## Obesity

Excess Weight, Adiposis

Common Causes	
Dog	Cat
+++ Overfeeding, Lack of Exercise, Neutering (esp bitch)	+++ Overfeeding, Lack of Exercise, Neutering (esp male cat)
++ Hypercortisolism (Cushing's Disease)	++ Glucocorticoid Long-Term Therapy
++ Glucocorticoid Long- Term Therapy	++ Arterial Hypertension
+ Hypothyroidism	

### With Polyphagia

- Hypercortisolism (Cushing's Disease) [Dog]
- Glucocorticoid Long-Term Therapy

### With Normophagia

- High caloric food
- Lack of Exercise
- Castration
- Hypothyroidism [Dog]

## Diagnostic Approach

### Obesity

#### 1. Case History

#### 2. General Examination

#### 3. Blood Tests

- GPT, AP
- Glc
- Chol, Trigl [Dog]

#### 4. Function Test

- $T_3/T_4, fT_4$  [Dog]
- TSH/TRH Stimulation test [Dog]
- Thyroglobulin Antibodies
- Adrenal Gland
  - Dexamethasone Suppression test ACTH
  - Stimulation test
  - Cortisol/Creatinine Ratio

## Anaemia

Reduction in the number of erythrocytes and/or of haemoglobin and/or of the haematocrit with normal blood volume

### **Regenerative Anaemia: Non-Regenerative Anaemia:**

- Haemolytic Anaemia
- Blood Loss Anaemia
- Aplastic Anaemia/  
Bone Marrow Failure
- Deficiency Anaemia

#### Common Causes

Dog	Cat
<b>Haemolytic Anaemia</b>	
+++ Immunoreactive Causes	+++ FeLV/FIV
++ Toxic Causes	++ <i>Haemobartonella felis</i>
++ Infectious Causes	++ Toxic Causes ++ Immunoreactive Causes
<b>Blood Loss Anaemia</b>	
++ Ruptured organ/blood vessel	+++ Ruptured organ/blood vessel
++ Bleeding tumour (esp splenic/intestinal tumour)	++ Bleeding tumour
++ Bleeding ulcer	+ Bleeding fracture/haematoma
++ Bleeding fracture/haematoma	
++ Coagulopathy	
<b>Aplastic Anaemia</b>	
++ Toxic Causes	++ Immunoreactive Causes
++ Leukaemia	++ Toxic Causes
++ Chronic Renal Failure	++ FeLV/FIV, Leukaemia ++ Chronic Renal Failure

## Haemolysis

### Infectious Causes

- Viruses
  - *FeLV/FIV* [Cat]
  - FIP Coronavirus [Cat]
- Parasites/Rickettsia
  - *Babesia* sp. [Dog]
  - *Haemobartonella* sp. [Cat]
    - (*Ehrlichia* sp. [Dog])
    - (*Hepatozoon* sp. [Dog])
    - (*Dirofilaria* sp. [esp Dog])
    - (*Cytauxzoon* sp. [Cat])

- Bacteria
  - Leptospira sp. [Dog]

### **Immunoreactive Causes**

- Autoimmune haemolysis
- Drug allergy
- Neonatal Isoerythrolysis [Cat]
- Blood transfusion incompatibility

### **Toxic Causes**

- Water enema [Cat]
- Drugs
  - Antibiotics
  - NSAIDs (esp paracetamol)
  - Propylene glycol
  - Antiarrhythmics
  - Anticonvulsants
  - Cimetidine
  - Levamisole
  - Metronidazole
  - Griseofulvin
  - Phenothiazin
  - Methylene blue
  - Cytostatics
  - Vaccinations
  - Vitamin K
  - Benzocain
  - Methionin
- Onions/Garlic/Broccoli
- Snake venom
- Heavy metal Poisoning

### **Other Causes**

- DIC
- Haemangiosarcoma
- Septicaemia/Endotoxaemia
- Lymphatic Leukaemia/  
Lymphoma

- Splenic torsion
- V.cava Syndrome (Dirofilariosis)
- Microangiopathy
- Heat stroke
- Pyruvate kinase deficiency [Dog]
- Phosphofructokinase deficiency [Dog]
- Copper storage disease [Dog]
- Vasculitis
- Feline Porphyria [Cat]
- Hypophosphataemia

### **Blood Loss**

#### **Acute Blood Loss**

- Traumatic organ or blood vessel rupture
- Bleeding tumour
- Coagulopathy
- Epistaxis
- Acute gastrointestinal haemorrhage
- Acute urinary tract haemorrhage
- Bleeding aneurysm

#### **Chronic Blood Loss**

- Chronic gastrointestinal haemorrhage
- Haemorrhagic gastroenteritis
- Bleeding tumour
- Chronic urinary tract haemorrhage
- Hook worm infestation
- Bleeding tumour
- Ectoparasitic infestation
- Coagulopathy

- Iron deficiency (Cause + Effect)

## Bone Marrow Failure

### Infectious Causes

- Viruses
  - FeLV/FIV [Cat]
  - Parvovirus
- Rickettsia
  - (Ehrlichia sp. [Dog])
- Parasites
  - (Leishmania sp. [Dog])

### Endocrine Causes

- Hypothyroidism [Dog]
- Hypocortisolism (Addison's Disease) [Dog]
- STH Deficiency

### Toxic Causes

- Drugs
  - Fenbendazole
  - Synthetic Oestrogens
  - Azathioprine [Cat]
  - Phenylbutazone
  - Metamizol
  - Acetylsalicylic acid
  - Chloramphenicol
  - Primidon
  - Sulfonamide/Trimetoprim

- Tetracyclines
- Cytostatics
- Arsenic derivates
- Griseofulvin [esp Cat]
- Endogenous Oestrogens
- Sertoli Cell Tumour [esp Dog]
  - Ovarian cysts
  - Granulosa Cell Tumour
- Organophosphates
- Heavy metals
  - Lead
  - Aluminium
  - Cadmium
- Radiotherapy

### Erythropoietin Deficiency

- Chronic Renal Failure

### Bone Marrow Tumours

- Multiple Myeloma [Dog]
- Lymphatic Leukaemia
- Myeloid Leukaemia

### Other Causes

- Myelofibrosis/Osteofibrosis
- Autoimmune Disease
- Vitamin B<sub>12</sub>-/Folic Acid Deficiency
- Copper Deficiency

## Diagnostic Approach

### *Obesity*

- 1. Case History**
- 2. General Examination**

### **3. Blood Tests**

- Hct, RBC, WBC
- Hb, MCH, MCV, MCHC

- Diff Blood Count
  - Blood parasites
  - Morphology of erythrocytes
- TP, Alb, Glob
- GPT, AP, Urea, Crea
- Reticulocytes
- Bili, LDH
- Na, K, Ca, P
- Glc, Chol

### **COAGULATION**

- Bleeding time
- Prothrombin time (PT/Quick)
- (Activated) partial Thromboplastin time (PTT/aPTT)
- Fibrin Degradation Product (FDP)
- Thrombocyte number

### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Babesia Antibody [Dog]
- Ehrlichia Antibody [Dog]
- Leptospira Antibody [Dog]

### **IMMUNOSEROLOGY**

- Microscope Slide Agglutination Test
- Coombs Test

- ANA Test

### **FUNCTION TESTS**

- T<sub>4</sub>, fT<sub>4</sub>
- TSH-/TRH Stimulation Test [Dog]
- Adrenal Gland Function Test [Dog]
  - Dexamethasone Suppression test
  - ACTH Stimulation Test
  - Cortisol/Creatinine Ratio

### **FURTHER SEROLOGY**

- Serum iron
- Serum Vitamin B<sub>12</sub>-/Folic acid
- Serum led

### **4. Urinalysis**

- Urine dip stick
- Specific gravity
- Urine sediment

### **5. Faecal Examination**

- Intestinal parasites Occult blood
- Parvovirus Antigen Test [Dog]

### **6. Further Tests**

- Bone Marrow Biopsy
- X-Ray Study
- Ultrasound

## **Abdominal Pain**

Acute or chronic pain in the abdomen with diffuse or localised pain on palpation, tense abdominal wall, hunched back, shallow breathing, pain vocalisation and a preference to take in pressure relieving positions (back or prone position)

## Common Causes

Dog	Cat
+++ Gastroenteritis	+++ Gastroenteritis
++ Ileus	++ Ileus
++ Gastric Dilation/Volvulus	++ Constipation
++ Constipation	++ Tumours
++ Pancreatitis	++ Renal/Urinary Tract Disease
++ Gastric/Duodenal Ulcer	
++ Tumours	++ Peritonitis
+ Renal/Urinary Tract Disease	+ Pancreatitis
+ Organ Rupture	+ Gastric Ulcer

## Cranial Abdomen

### Acute Causes

- Gastric Dilation/ Volvulus [Dog]
- Gastric Perforation
  - Trauma
  - Foreign Body
  - Ulcer
- Acute Pancreatitis [esp Dog]

### Chronic Causes

- Gastritis/Duodenitis
- Gastric/Duodenal Ulcer
- Chronic Pancreatitis
- Hepatitis/Cholangitis
- Splenic Torsion
- Gastric Carcinoma
- Hepatic Abscess
- Hepatic Tumour
- Cholelithiasis
- Splenitis/Splenic tumour

## Caudal Abdomen

### Acute Causes

- Obstruction of the Urinary Tract

- FLUTD [Cat]
- Urolithiasis
- Urinary Bladder/Urethral Tumour
- Acute Prostatic Disease [Dog]
  - Prostatitis, Prostatic Abscess
  - Prostatic Carcinoma
- Traumatic Vessel/Organ Rupture
  - Urinary Bladder Rupture
  - Uterine Rupture
- Feline Aortic Thrombosis [Cat]
- Referred Pain Spinal Column
- Testicular torsion/ Cryptorchism [Dog]
- Colonic Ulcer
- Dystocia

### Chronic Causes

- Cystitis
- Endometritis
- Chronic Prostatic Disease [Dog]
  - Prostatic Hyperplasia
  - Prostatic Cyst

- Prostatic Carcinoma
- Paraprostatic Cyst
- Colitis
- Tumour
- Perianal Disease
  - Anal Gland Abscess
  - Perianal Fistula
  - Perianal Tumour
  - Perineal Hernia
  - Perianal Wound
- Diabetic Ketoacidosis
- Pancreatitis
- Meteorism
- Vagus Paralysis
- General Anaesthesia
- Atropine
- Butylscopolamine
- Peritonitis
  - FIP Coronavirus [Cat]
  - Septicaemia
  - Mechanical Ileus
  - Penetrating Wounds
  - Blunt Trauma
  - Intestinal Perforation
  - Ulcer Perforation
  - Organ Rupture (urine, bile, pancreatic enzymes)
  - Retroperitoneal abscess/haematoma
  - Ruptured Prostatic Abscess [Dog]
  - Pancreatitis
  - Postoperative Complications
  - Tumours
- Constipation
- Gastroenteritis
- Pyometra
- Tumors
- Referred Pain
  - Spinal Column
  - Thorax/Pleura
  - Kidneys
  - Cranial/Caudal Abdomen
- Dystocia
- Occlusion of the mesenteric artery
- Portal Vein Thrombosis
- Intestinal Adhesions

## Diffuse Abdominal Pain

### Acute/Chronic Causes

- Mechanical Ileus (Intestinal obstruction)
  - Foreign Body
  - Tumour
  - Intestinal Parasites
  - Intussusception
  - Incarceration (Hernia)
  - Volvulus
  - Adhesions
- Paralytic Ileus (Enteral Motility Disorder)
  - Mesenteric Infarction
  - Infectious Enteritis
  - Toxic Enteritis
  - Gastric/Duodenal Ulcer
  - Gastropexy [Dog]
  - Intestinal Perforation
  - Dysautonomia [Cat]
  - Pyloric Stenosis
  - Postoperative Intestinal Paralysis
  - Peritonitis
  - Uraemia
  - Sepsis
  - Hypokalaemia
  - Hypothyroidism [Dog]
  - Hepatic Encephalopathy

## Dorsal Abdomen

### Acute Causes

- Acute Nephritis/  
Pyelonephritis

- Retroperitoneal abscess/  
haematoma
- Renal Calculi
- Hydronephrosis
- Renal Infarction

## Diagnostic Approach

### *Abdominal Pain*

#### 1. Case History

#### 2. General Examination

#### 3. X-Ray Study

- Abdomen
- Thorax
- Gastrointestinal Contrast Medium Study
- Cystography
- Urography

#### 4. Ultrasound Examination

- Abdomen

#### 5. Blood Tests

- Hct, Ery, Leuc
- TP, Alb, Glob
- GPT, AP, Urea, Crea, Bili, BG
- Amylase, Lipase [Dog]
- Blood Sedimentation Rate (BSR)
- Diff BC
- Na, K, Ca
- TLI Test
- Bile Acids
- FIP Profile [Cat]
  - TP
  - Alb/Glob Ratio
  - Bili
  - GOT/AST
  - Serum Electrophoresis

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]

#### 6. Urinalysis

- Urine dip stick
- Specific gravity
- Urine sediment
- Urinary output/volume

#### 7. Endoscopy

- Gastro-/Duodenoscopy
- ± Biopsy
- Colonoscopy ± Biopsy

#### 8. Further Tests

- Fluid Analysis of body cavity Effusions
- Neurological Examination Spinal Reflexes
  - Bicipital reflex (C6–C8)
  - Triceps reflex (C7–T1)
  - Patellar reflex (L4–L6)
  - Interdigital Pain reflex (C6–T1 and L6–S1)
  - Cutaneous trunci reflex (C7–T1)
  - Anal sphincter reflex (S1–S3)
  - Urinary bladder – can it be expressed?

## Abdominal Distention

### Enlarged Abdomen

Common Causes	
Dog	Cat
+++ Abdominal effusion/Ascites	+++ Abdominal effusion
++ Hypercortisolism (Cushing's Disease)	++ Tumours
++ Tumours	++ Organ enlargement
++ Gastric dilation/volvulus	
++ Organ enlargement	

### Organ Enlargement

#### Renomegaly

- Viral Nephritis
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
- Bacterial Nephritis
  - Leptospira sp. [Dog]
- Toxic Nephritis
  - Ethylene glycol Poisoning
- Renal Congestion
  - Hydronephrosis (Urinary Tract Obstruction)
- Renal Tumours
  - Lymphosarcoma [esp Cat]
  - Sarcoma
  - Nephroblastoma
  - Adenocarcinoma
  - Renal Epithelial Carcinoma [Dog]
- Other Causes
  - Renal abscess
  - Renal haematoma
  - Renal cysts [Cat]

- Compensatory Renal Hypertrophy
- Tumour Metastasis

#### Splenomegaly

- Splenic Congestion
  - Right Sided Cardiac Failure
  - Splenic Torsion
  - Hepatic Cirrhosis
  - Sedation/General Anaesthesia
- Splenic Tumours
  - Haemangiosarcoma [esp Dog]
  - Lymphosarcoma
  - Mast Cell Tumour
  - Multiple Myeloma
  - Malignant Histiocytosis [St Bernard Dog]
  - Fibrosarcoma
- Parasitic Splenitis
  - Toxoplasma sp.
  - (Leishmania sp. [esp Dog])
  - (Dirofilaria sp. [esp Dog])
- Viral Splenitis

- FeLV/FIV [Cat]
- FIP Coronavirus [Cat]
- CAV-1 (Hepatitis c. c.) [Dog]
- Bacterial Splenitis
  - Brucella sp. [Dog]
  - Salmonella sp.
  - Mycobacterium sp.
  - Septicaemic Pathogens
- Rickettsial Splenitis
  - Haemobartonella sp. [Cat]
  - (Ehrlichia sp. [Dog])
- Immunoreactive Splenitis
  - Feline Hypereosinophilic Syndrome [Cat]
  - Lupus erythematosus
  - Immunohaemolytic Anaemia
- Other Causes
  - Splenic abscess/haematoma
  - Tumour Metastasis

## Hepatomegaly

- Viral Hepatitis
  - CAV-1 (Hepatitis c. c.) [Dog]
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
- Bacterial Hepatitis/Cholangitis
  - Salmonella sp.
  - E. coli
  - Staphylococcus sp.
  - Bacillus sp. [Dog]
  - Leptospira sp. [Dog]
- Parasitic Hepatitis/Cholangitis
  - Toxoplasma sp.
  - Capillaria sp.
  - (Leishmania sp. [esp Dog])
  - (Opisthorchis sp. [Cat])
- Immunoreactive Cholangitis

- Feline lymphocytic Cholangiohepatitis
- Metabolic Hepatosis
  - Feline Hepatic Lipidosis [Cat]
  - Glycogen Storage Disease
  - Copper Storage Disease [Dog]
  - Diabetes mellitus
  - Amyloidosis
  - Hypercortisolism (Cushing's Disease) [Dog]
  - Glucocorticoid Long Term Therapy
- Hepatic Congestion
  - Right Sided Cardiac Failure
  - Pericardial Disease
  - Cardiac Arrhythmias
  - Vena cava syndrome (Dirofilaria sp. [Dog])
  - Bile Duct Obstruction
  - Thrombosis
- Hepatic Tumours
  - Bile Duct Adenoma/
  - Carcinoma
  - Hepatocellular Adenoma/ Carcinoma
  - Lymphosarcoma
  - Haemangioendothelioma
  - Mast Cell Tumour
  - Tumour Metastasis
- Toxic Hepatosis

## NSAID

- Paracetamol
- Phenylbutazone
- Naproxen
- Acetylsalicyl Acid
- Ibuprofen
- Indometacin

**Anticonvulsants**

- Phenobarbital
- Primidon
- Diazepam

**Antibiotics**

- Ampicillin
- Erythromycin
- Nitrofurantoin
- Tetracyclines

**Inhalation Anaesthetics**

- Halothan
- Methoxyflurane

**Others**

- Griseofulvin
- Procainamide
- Warfarin
- Haloperidol
- Phenothiazine
- Cimetidine
- Vitamin A
- Glucocorticoids
- Cytostatics
- Aflatoxines
- Household Agents
- Poisonous Plants
- Heavy metals
- Bile Duct Obstruction
  - Pancreatic Carcinoma
  - Acute Pancreatitis
  - Bile Duct Carcinoma
  - Cholelithiasis
  - Intestinal Tumour (Papillary tumour)
  - Enteral Foreign Body
- Other Causes
  - Hepatic Cysts

- Biloma
- Hepatic Abscess
- Haematoma

**Gastric/Intestinal Enlargement**

- Gastric Overload (Polyphagia)
- Gastric Dilation/Volvulus [Dog]
- Intestinal Obstruction (Ileus)
- Constipation
- Meteorism

**Uterine Enlargement**

- Pregnancy  
Pyometra
- Hydrometra
  - Mucometra
  - Uterine tumours

**Ovarian Enlargement**

- Ovarian Cysts
- Ovarian Tumours
  - Granulosa Cell Tumour
  - Cystadenoma/-carcinoma [Dog]

**Urinary Bladder Enlargement (Obstruction of the Urinary Tract)**

- Urolithiasis
- FLUTD [Cat]
- Prostate Enlargement [Dog]
  - Prostatic Cysts
  - Prostatic Hyperplasia
  - Prostatitis/Prostatic Abscess
  - Prostatic Carcinoma
  - Paraprostatic Cyst
- Bladder/Urethral Tumours
  - Transitional Cell Carcinoma

- Leiomyoma/-sarcoma
- Fibroma
- Squamous Cell Carcinoma
- Polyp
- Papilloma
- Canine Transmissible Venereal Tumour [Dog]
- Neurological Causes
  - Sphincter Spasm (UMN Lesion)
  - Detrusor Atony (LMN Lesion)
  - Reflex Dyssynergia [Dog]
- Other Causes
  - Pelvic Fractures
  - Spinal disease
  - Abdominal tumours
  - Cystitis/Urethritis

## Abdominal Effusion/ Ascites

### Transudate

- Hypoalbuminaemia
  - Protein-losing enteropathy and nephropathy
  - Hepatic cirrhosis/ portosystemic shunt
  - Cachexia
  - Burns
- Tumours
- Obstruction of lymphatic vessels
- Hepatic cirrhosis

### Modified Transudate

- Right Sided Cardiac Failure
- Pericardial Disease
- Tumours

### Exudate

- Pus
  - Penetrating wounds
  - Ruptured Pyometra
  - Intestinal perforation
  - Ileus
  - Septicaemia/Ruptured abscess
  - Peritonitis
- Blood
  - Traumatic rupture of an organ or vessel
  - Coagulopathies
  - Splenic rupture/ haemangiosarcoma [Dog]
- Chyle
  - Obstruction of lymphatic vessels
  - Retroperitoneal haematoma
  - Lymphangiectasia [Dog]
  - Hepatic cirrhosis
  - Cardiac disease
  - Ileus
  - Acute pancreatitis
  - Tumours
- Pseudochylous Effusion
  - Tumours
  - Chronic inflammation
- Urine
  - Rupture of the bladder/ ureteral or urethral avulsion
- Bile
  - Rupture of the gall bladder
  - Hepatic rupture
- Other causes
  - Intestinal torsion/volvulus
  - Testicular torsion/ cryptorchism
  - Gastric/Intestinal rupture
  - Pancreatic rupture

- Acute Pancreatitis
- Tumours
- FIP [Cat]
- Diaphragmatic hernia
- Vena cava Syndrome  
(Dirofilaria sp. [Dog])
- Hypercortisolism (Cushing's Disease) [esp Dog]
- Pneumoperitoneum
  - Penetrating Wounds
  - Gastric/Intestinal perforation
  - Uterine perforation
- Obesity
- Umbilical hernia

## Other Causes

- Weakness of the abdominal muscles

## Diagnostic Approach

### *Abdominal Distention*

#### **1. Case History**

#### **2. General Examination**

#### **3. X-Ray Study**

- Abdomen
- Thorax

#### **4. Ultrasound Examination**

- Abdomen
- Heart (Doppler Echocardiography)

#### **5. Blood Tests**

- Hct, Ery, Leuc
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- FIP Profile [Cat]
  - TP
  - Alb/Glob Ratio
  - Bili
  - GOT
  - Serum electrophoresis
- Diff BC
- Amylase, Lipase [Dog]
- TLI Test

- Bile acids
- Bilirubin

### **COAGULATION**

- Bleeding time
- Prothrombin time (PT/Quick)
- (Activated) partial Thromboplastin time (PTT/aPTT)
- Fibrin degradation product (FDP)
- Thrombocyte number

### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Dirofilaria immitis Antigen [Dog]

### **FUNCTION TESTS**

- Adrenal Gland function tests [Dog]
- Dexamethasone Suppression test
- ACTH Stimulation test
- Cortisol/Creatinine Ratio

#### **6. Fluid Analysis of Abdominal Effusion**

- Colour/Consistency/Smell
- Specific gravity

- Albumin/Globulin Ratio
- Rivalta Test [Cat]
- LDH, Bili, Crea, Amylase, Lipase
- Chol, Trigl
- Ether Clearance Test
- Cytology
- Bacterial culture

### 7. Urinalysis

- Urine dip stick
- Specific gravity
- Urine sediment

### 8. Further Tests

- Angiography
- Laparotomy

## Bite and Scratch Wounds

Wound infection in humans, caused by dog and cat bites as well as scratches

Dog Bite Wounds	Cat Bite/Scratch Wounds
<ul style="list-style-type: none"> <li>• Bacterial wound infection           <ul style="list-style-type: none"> <li>– Staphylococcus sp.</li> <li>– Streptococcus sp.</li> <li>– Clostridium sp.</li> <li>– Bacteroides sp.</li> <li>– Pasteurella sp.</li> </ul> </li> <li>• Viral wound infection           <ul style="list-style-type: none"> <li>– (Rabies Virus)</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>• Rickettsial wound infection           <ul style="list-style-type: none"> <li>– Bartonella (Rochalimaea) henselae</li> </ul> </li> <li>– Bacterial wound infection           <ul style="list-style-type: none"> <li>– Afipia felis</li> <li>– Pasteurella sp.</li> <li>– Staphylococcus sp.</li> <li>– Streptococcus sp.</li> <li>– Clostridium sp.</li> <li>– Bacteroides sp.</li> </ul> </li> <li>• (Viral wound infection           <ul style="list-style-type: none"> <li>– Rabies Virus)</li> </ul> </li> </ul>

## Tendency to Bleed

Haemorrhagic Diathesis: Spontaneous haemorrhages in various locations

- |   |   |
|---|---|
| <ul style="list-style-type: none"> <li>• Epistaxis (Nose bleed)</li> <li>• Haemarthrosis (Joint bleed)</li> <li>• Haemoptysis (Coughing blood)</li> <li>• Haematuria</li> </ul> | <ul style="list-style-type: none"> <li>• Hyphema (Bleed into the anterior chamber of the eye)</li> <li>• Haematoma</li> <li>• Haemorrhage (Gastrointestinal bleed)</li> <li>• Haemorrhage into a body cavity</li> </ul> |
|---|---|

- Pulmonary haemorrhage
- Haematemesis (Vomiting blood)
- Petechiae/Ecchymoses (Mucous Membrane Haemorrhage)

**Thrombocytopenia:** Decreased thrombocyte number

**Thrombocytopathy:** Thrombocyte dysfunction (Adhesion dysfunction, Aggregation dysfunction, Storage pool Defects)

**Coagulopathy:** Plasmatic clotting disorder

### Common Causes

Dog	Cat
+++ Dicoumarol poisoning	+++ Leukaemia
++ DIC	++ DIC
++ Von Willebrand Disease	++ Hyperviscosity syndrome
++ Haemophilia A	++ Arterial Hypertension
+ Infectious Thrombocytopenia	+ Haemophilia A
+ Immunothrombocytopenia	+ Infectious Thrombocytopenia
+ Tumours	+ Immunothrombocytopenia

### Thrombocytopenia

#### ↓ Production of Thrombocytes (Bone marrow damage)

- Infectious Causes
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
  - Parvovirus
  - (Ehrlichia sp. [Dog])
- Toxic Causes
  - Phenylbutazone
  - Metamizole
  - Chloramphenicol
  - Phenobarbital
  - Sulfonamides
  - Tetracyclines
  - Cytostatic
  - Radiation
  - Heavy metal poisoning
  - Oestrogen
- Immunoreactive Causes

- Infection
- Drugs (Gold, Cephalosporines, Oestrogens, Vaccines)
- Autoimmune Diseases

- Bone Marrow Tumours
  - Multiple Myeloma
  - Lymphatic Leukaemia
  - Myeloid Leukaemia
- Other Causes
- Myelofibrosis/Osteofibrosis

#### ↑ Consumption of Thrombocytes

- DIC
  - Septicaemia/Endotoxaemia
  - Gastric Dilation/ Volvulus
  - Pyometra
  - Urinary Tract Infections
  - Haemorrhagic Enteritis
  - Splenic Torsion
  - Acute Pancreatitis

- Shock
  - Heart Failure
  - Liver Failure
  - Haemolysis
  - Snake Venom
  - Heat Stroke
  - Electrical Accident
  - Burns
  - FIP [Cat]
  - Tumour Disease
  - (Dirofilaria sp. [Dog])
  - Immunoreactive Causes
    - Infection
    - Drugs
    - (Gold, Cephalosporines, Oestrogens, Vaccines)
    - Autoimmune Diseases
  - Infectious Causes
    - FeLV/FIV [Cat]
    - FIP Coronavirus [Cat]
    - Parvovirus
    - Distemper Virus [Dog]
    - CAV-1 (Hepatitis c. c.) [Dog]
    - Canine Herpesvirus [Dog]
    - Leptospira sp. [Dog]
    - Salmonella sp.
    - Haemobartonella sp. [Cat]
    - Babesia sp. [Dog]
    - (Ehrlichia sp. [Dog])
    - (Histoplasma sp.)
  - Splenomegaly
  - Chronic Haemorrhage
  - Thrombosis [esp Cat]
- Chediak-Higashi Syndrome [Cat]
  - Thrombasthenia (Glanzmann) [Dog]
  - Platelet Aggregation Defect [Basset Hound/Pomeranian]
  - Cyclic Neutropenia [Grey Collie]

## Acquired Causes

- Drugs
  - NSAID (esp Acetylsalicylic acid)
  - Glucocorticoids
  - Antibiotics
  - Antihistamines
  - Dextrans
  - Local Anaesthetics
- Uraemia
- Hepatic Failure
- Acute Pancreatitis
- Bone Marrow Tumours
  - Multiple Myeloma
  - Lymphatic Leukaemia
  - Myeloid Leukaemia
- Hyperviscosity Syndrome
  - Multiple Myeloma
  - Lymphatic Leukaemia
  - FIP Coronavirus [Cat]
  - Lupus Erythematosus
  - Polycythaemia vera
  - Dehydration
  - (Leishmania sp. [esp Dog])
  - (Ehrlichia sp. [Dog])

## Plasmatic Coagulopathy

### Congenital Causes

- Factor VIII Deficiency (Haemophilia A) [male Dogs + Cats]
- Von Willebrand Disease [esp Dog]

### Thrombocytopathy

### Congenital Causes

- Factor IX Deficiency  
(Haemophilia B) [male Dogs + Cats]
- Von Willebrand Disease [Dogs; rarely Cats]
- Factor VII Deficiency [Beagle]
- Factor X Deficiency [Cocker]
- Factor XI Deficiency [Dog]
- Factor XII Deficiency  
(Hagemann) [Cat]
- Vitamin K dependent Coagulopathy [Devon Rex Cats]

## Acquired Causes

- Vitamin K Deficiency/  
Antagonism
  - Hepatic Failure
  - Malabsorption Syndrome
  - Obstructive Jaundice
  - Damage of the intestinal flora (Antibiotics)
  - Rodenticide Poisoning

- DIC
  - Septicaemia/Endotoxaemia
  - Gastric Dilation/Volvulus [Dog]
  - Pyometra
  - Urinary Tract Infections
  - Haemorrhagic Enteritis
  - Splenic Torsion
  - Acute Pancreatitis
  - Shock
  - Heart Failure
  - Liver Failure
  - Haemolysis
  - Snake Venom
  - Heat Stroke
  - Electrical Accident
  - Burns
  - FIP Coronavirus [Cat]
  - Tumour Diseases
  - (Dirofilaria sp. [Dog])
- Other Causes
  - Heparin Treatment
  - Fibrinolytic Treatment

## Diagnostic Approach

### Tendency to Bleed

#### 1. Case History

#### 2. General Examination

#### 3. Blood Tests

- Hct, Ery, Leuc, Hb
- Diff BC
- MCV, MCV, MCHC
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- FIP Profile [Cat]
  - TP
  - Alb/Glob Ratio

- Bili
  - GOT/AST
  - Serum Electrophoresis
- Serum Electrophoresis

#### MICROBIAL SEROLOGY

- FeLV-/FIV Antigens [Cat]
- Babesia Antibodies [Dog]
- Ehrlichia Antibodies [Dog]
- Leptospira Antibodies [Dog]

#### COAGULATION

- Bleeding time

- Prothrombin time (PT/Quick)
- (Activated) partial Thromboplastin time (PTT/aPTT)
- Thrombocyte Count
- Fibrin Degradation Product (FDP)
- Autoantibodies against Thrombocytes
- Von Willebrand Disease
- Determination of Factors II-XII

#### **IMMUNOSEROLOGY**

- Coombs Test
- ANA Test
- Microscope Slide Agglutination Test

#### **FUNCTION TESTS**

- T<sub>4</sub> [Cat]

#### **4. Urinalysis**

- Urine dip stick
- Specific gravity
- Urine sediment
- Bence-Jones Proteins

#### **5. X-Ray Study**

- Thorax
- Abdomen
- Skull/Tympanic Bulla

#### **6. Further Tests**

- Bone Marrow Biopsy/Cytology
- Blood Pressure Measure (indirect/direct)
- Ultrasound
- Liver biopsy

## **Pyrexia and Hyperthermia**

**Fever/Pyrexia:** Increased body temperature ( $> 39.7^{\circ}\text{C}$ ) as a result of impaired hypothalamic thermoregulation

**Hyperthermia:** Increased body temperature ( $> 39.7^{\circ}\text{C}$ ) as a result of increased heat supply, increased heat generation or reduced heat emission

#### **Common Causes**

Dog	Cat
+++ Infectious Diseases	+++ Infectious Diseases
++ Drug Fever	++ Drug Fever
++ Tumour Fever	++ Tumour Fever
++ Heat Stroke	++ Hyperthyroidism
++ Arthropathies	+ Haemophilia A

## Pyrexia

### Infectious Causes

- Viral Infections
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
  - Cat Flu Syndrome [Cat]
  - Distemper Virus [Dog]
  - Parvovirus
  - CAV-1 (Hepatitis c. c.) [Dog]
- Bacterial Infections
  - Gram-positive and Gram-negative
  - Septicaemia/Endotoxaemia
  - Lyme Borrelia sp. [Dog]
  - Brucella sp. [Dog]
- Rickettsial Infections
  - Haemobartonella sp. [Cat]
  - (Ehrlichia sp. [Dog])
  - (Rickettsia sp. [Dog])
- Parasitic Infections
  - Toxoplasma sp.
  - Babesia sp. [esp Dog]
  - (Leishmania sp. [esp Dog])
  - (Cyttauxzoon sp. [Cat])
  - (Hepatozoon sp. [Dog])
  - (Dirofilaria sp. [esp Dog])
  - Larva migrans
- Mycotic Systemic Infections
  - Cryptococcus sp. [Cat]
  - (Histoplasma sp.)
  - (Blastomyces sp.)
  - (Coccidioides sp.)

### Immunoreactive Causes

- Polyarthritis
- Polymyositis
- Glomerulonephritis

- Allergy
- Lupus erythematosus
- Pemphigus Complex
- Immune Haemolytic Anaemia
- Immunothrombocytopenia
- Vasculitis

### Drug Fever

- Tetracyclines
- Sulfonamides
- Penicillins
- Amphotericin B
- Antimon preparations
- Barbiturates
- Antihistamines
- Acetylsalicylic acid
- Paracetamol
- Procainamide
- Cytostatics
- Arsenic preparations
- Vaccines

### Tumour Fever

- Solid Tumours
- Tumour metastasis
- Myeloproliferative Tumours

### Other Causes

- Arthropathies
- Bacterial sources of infections
- Endocarditis
  - Abscess/dental abscess
- Blunt Trauma
- Recurrent infections due to Immunosuppression
- Arterial Thromboembolism
- Hypothalamic Diseases

## Hyperthermia

### ↑ Heat Supply

- High Outdoor Temperature
- High Humidity

### ↑ Heat Generation

- Excitement
- Exercise
- Tachypnoea/Dyspnoea

- Seizures
- Hyperthyroidism [Cat]
- Malignant Hyperthermia (Anaesthesia)
- Phaeochromocytoma

### ↓ Heat Emission

- Heat Stroke
- Obesity

## Diagnostic Approach

### *Pyrexia and Hyperthermia*

#### 1. Case History

#### 2. General Examination

#### 3. Oropharyngeal Examination

#### 4. Blood Tests

- Hct, Ery, Leuc
- GPT, AP, Urea, Crea, Bili, BG
- FIP Profile [Cat]
  - TP
  - Alb/Glob Ratio
  - Bili
  - GOT/AST
  - Serum electrophoresis
- Thrombocytes
- Diff BC
- TP, Alb, Glob
- Amylase, Lipase [Dog]
- TLI Test
- Bile Acids

#### MICROBIAL SEROLOGY

- FeLV-/FIV Antigen [Cat]
- Toxoplasma Antibodies

- Lyme Borrelia Antibodies [Dog]
- Dirofilaria Antigen [Dog]
- Leishmania Antibodies [Dog]

#### IMMUNE SEROLOGY

- ANA Test
- Coombs Test

#### FUNCTION TESTS

- T<sub>4</sub>, fT<sub>4</sub> [Cat]

#### 5. X-Ray Study

- Abdomen
- Thorax
- Skull
- (Tympanic bulla + teeth)
- Contrast medium study of the gastrointestinal tract

#### 6. Urinalysis

- Urine dip stick
- Specific gravity
- Urine sediment

#### 7. Ultrasound

- Abdomen ± biopsy
- Heart

## 8. Further Tests

- Lymph node biopsy/cytology
- Peritoneal lavage/cytology
- Blood culture (BE)
- Tracheobronchial lavage/cytology/BE
- Bone Marrow biopsy/cytology
- Arthrocentesis/Synovial analysis
- Spinal tap/analysis
- Laparotomy

## Hypothermia

Reduction of the internal body temperature  
Reduction of the external body temperature

### Common Causes

Dog	Cat
+++ Sedation/Anaesthesia	+++ Sedation/Anaesthesia
++ Circulatory shock	++ Circulatory shock
++ Lack of Exercise	++ Lack of Exercise
++ Neonate	++ Neonate
++ Hypothyroidism	++ Feline Aortic Thrombosis

### ↓ Internal Body Temperature

#### ↓ Heat Production

- Sedation/Anaesthesia
- Circulatory Shock
- Hypothyroidism [Dog]
- Lack of Exercise as a result of systemic disease
- Hypothalamic disease
- Bradycardic cardiac arrhythmias
- Hypoglycaemia
- Cachexia
- Immature Thermoregulation (Neonates/Premature litters)

#### ↑ Heat Loss

- Exposure to the cold

- Small animals/Neonates
- Lack of exercise as a result of trauma/paralysis
- Burns

### ↓ External Body Temperature

#### Shock

- Hypovolaemic Shock
- Cardiogenic Shock
- Neurogenic Shock
- Poisoning

#### Vascular Thrombosis

- Feline aortic thrombosis [Cat]
- Arterial thrombosis

## Diagnostic Approach

### Hypothermia

#### 1. Case History

#### 2. General Examination

#### 3. Blood Tests

- Hct, Erys, Leuc, Hb
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- Na, K, Ca
- Diff BC
- Blood Gas Analysis (BGA)
- Thrombocytes
- Serum electrophoresis

#### MICROBIAL SEROLOGY

- FeLV-/FIV Antigen [Cat]

#### FUNCTION TESTS

- T<sub>4</sub>, fT<sub>4</sub>
- TSH-/TRH Stimulation Test [Dog]

#### 4. Urinalysis

- Urinary output/volume
- Urine dip stick
- Specific gravity
- Urine sediment

#### 5. X-Ray Study

- Thorax
- Abdomen

#### 6. Ultrasound

- Heart (Doppler Echocardiography)
- Abdomen

#### 7. Further Tests

- Measure of the femoral pulse [Cat]
- Neurological Examination
- Electrocardiogram (ECG)
- Blood Pressure (indirect/direct)

## Icterus/Jaundice

Yellow discolouration of the skin and mucous membranes due to accumulation of bilirubin

#### Common Causes

Dog	Cat
<b>Prehepatic Icterus</b>	
+++ Toxic Haemolysis	+++ FeLV/FIV
++ Immunoreactive Haemolysis	++ Haemobartonella felis
++ DIC	++ Toxic Haemolysis
++ Neonate	++ Immunoreactive Haemolysis
<b>Hepatocellular Icterus</b>	
++ Hepatotoxins	+++ Feline hepatic lipidosis

<b>Common Causes</b>	
Dog	Cat
++ Liver tumours	+++ Feline Cholangiohepatitis
++ Right Sided Heart Failure	++ Hepatotoxins ++ Liver tumours + Right Sided Heart Failure
Posthepatic Icterus	
++ Obstructive Tumours	++ Obstructive Tumours

## Prehepatic Icterus

### Infectious Causes

- Leptospira sp. [Dog]
- FeLV/FIV [Cat]
- Haemobartonella sp. [Cat]
- Babesia sp. [esp Dog]
- (Ehrlichia sp. [Dog])
- (Dirofilaria sp. [Vena cava Syndrome] [Dog])
- (Hepatozoon sp. [Dog])

### Immunoreactive Causes

- Drug Allergy
  - Penicillins
  - Cephalosporins
  - Sulfonamides
  - Phenylbutazone
  - Propylthiouracil
  - Levamisol
  - Paracetamol
- Autoimmune haemolysis
- Neonatal Isoerythrolysis [Cat]
- Blood transfusion incompatibility

### Toxic

- Drugs

- NSAID (esp Paracetamol, Ibuprofen)
- Antiarrhythmics
- Anticonvulsants
- Cimetidine
- Levamisol
- Metronidazole
- Griseofulvin
- Phenothiazin
- Methylene blue
- Vitamin K
- Benzocain
- Methionin
- Water enema [Cat]
- Onions
- Snake venom
- Heavy metal poisoning

### Other Causes

- Haemorrhage
  - Trauma
  - Tumours
  - Rodenticide Poisoning
  - DIC

## Hepatocellular Icterus

### Infectious Causes

- Viral Hepatitis

- CAV-1 (Hepatitis c. c.) [Dog]
- FeLV/FIV [Cat]
- FIP Coronavirus [Cat]
- Bacterial Hepatitis/Cholangitis
  - *Salmonella* sp.
  - *E. coli*
  - *Staphylococcus* sp.
  - *Bacillus* sp. [Dog]
  - *Leptospira* sp. [Dog]
- Parasitic Hepatitis/Cholangitis
  - *Toxoplasma* sp.
  - *Capillaria* sp.
  - (*Leishmania* sp. [esp Dog])
  - (*Opisthorchis* sp. [Cat])
- Glucocorticoids
- Cytostatics
- Other drugs
  - Procainamide
  - Warfarin
  - Haloperidol
  - Phenothiazide
  - Cimetidine
  - Vitamin A
- Household Agents
- Other poisons
  - Aflatoxines
  - Poisonous Plants

## Toxic Causes (Hepatotoxins)

- Antibiotics
  - Ampicillin
  - Erythromycin
  - Nitrofurantoin
  - Tetracyclines
- Antimycotics
  - Griseofulvin
  - Ketoconazole
- NSAID
  - Paracetamol
  - Phenylbutazone
  - Naproxen
  - Acetylsalicylic acid
  - Ibuprofen
  - Ketoprofen
  - Indometacin
- Inhalation Anaesthetics
  - Halothan
  - Methoxyfluran
- Anticonvulsants
  - Phenobarbital
  - Primidon
  - Diazepam

## Hepatic Tumours

- Primary tumours
  - Bile Duct adenoma/ carcinoma
  - Hepatocellular adenoma/ carcinoma
  - Lymphosarcoma [esp Cat]
  - Haemangioendothelioma
- Tumour Metastasis
  - Mammary carcinoma
  - Mast cell tumour
  - Lymphosarcoma [esp Cat]

## Other Causes

- Lymphocytic Cholangio-hepatitis [esp Cat]
- Liver abscess
- Feline hepatic lipidosis [Cat]
- Diabetes mellitus
- Hyperthyroidism [Cat]
- Hypercortisolism (Cushing's Disease) [Dog]
- Pancreatitis
- Right sided heart failure
- Cholelithiasis (Gall stones)
- Hepatic cysts

- Hepatic cirrhosis
- Amyloidosis
- Glycogen storage disease
- Copper storage disease [Dog]

- Bile Duct adenoma/carcinoma
- Acute Pancreatitis
- Pancreatic tumours
- Cholangitis/Cholecystitis
- Diaphragmatic hernia
- Small intestinal tumour  
(Papillary tumour)

## Posthepatic Icterus

### Bile Duct Obstruction

- Choledocholithiasis (Bile duct stones)

## Diagnostic Approach

### Icterus/Jaundice

#### 1. Case History

#### 2. General Examination

#### 3. Blood Tests

- Hct, Ery, Leuc
- Hb, MCH, MCV, MCHC
- Diff BC
  - Blood parasites
  - Erythrocyte morphology
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- Bili, Chol, LDH
- FIP Profile [Cat]
  - TP
  - Alb/Glob Ratio
  - Bili
  - GOT
  - Serum electrophoresis
- Reticulocytes
- Na, K, Ca, P

#### **COAGULATION**

- Bleeding time
- Prothrombin time (PT/Quick)
- (Activated) partial Thromboplastin time (PTT/aPTT)

- Fibrin Degradation products (FDP)
- Thrombocte number

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Babesia Antibodies [Dog]
- Ehrlichia Antibodies [Dog]
- CAV-1 Antibodies [Dog]
- Leptospira Antibodies [Dog]
- Leishmania Antibodies [Dog]
- Dirofilaria Antibodies [Dog]
- Toxoplasma Antibodies

#### **IMMUNOSEROLOGY**

- Coombs Test
- ANA Test
- Microscope slide Agglutination test

#### **FUNCTION TESTS**

- Adrenal Gland [Dog]
  - Dexamethasone Suppression test
  - ACTH Stimulation test
  - Cortisol/Creatinine Ratio

**FURTHER SEROLOGY**

- Blood typing [Cat]

**4. Urinalysis**

- Urine dip stick
- Specific gravity
- Urine sediment

**5. X-Ray Study**

- Abdomen

- Thorax

**6. Ultrasound**

- Abdomen ± Liver biopsy
- Heart (Doppler Echocardiography)

**7. Further Tests**

- Bone Marrow Biopsy/Cytology

## Infections, recurrent

**Common manifestations of recurrent infections:** Skin infections, urinary tract infections, respiratory tract infections, gastrointestinal infections rarer

### Common Causes

Dog	Cat
+++ Treatment failure	+++ Treatment failure
++ Bacterial focus of infection	++ FeLV/FIV
++ Diabetes mellitus	++ Bacterial focus of infection
++ Tumour disease	++ Diabetes mellitus
	++ Tumour disease

## Persistent Infection

- Treatment failure
- Bacterial resistance
- Acute relapses of latent infections (Herpes virus)
- Bacterial focus of infection (endocarditis, abscess)

- Cyclic neutropenia [Grey Collie]
- Thymal hypoplasia
- IgA deficiency [German Shepherd Dog, Beagle, Shar-Pei]
- IgM deficiency [Doberman]
- C<sub>3</sub> deficiency [Brittany Spaniel]
- Chediak-Higashi Syndrome [Persian Cat]
- Mucopolysaccharidosis [Siamese Cat, European Shorthair Cat]

## Immunodeficiency

### Primary Immunodeficiency

- X-chromosomal combined immunodeficiency [Basset]

- Leucocyte adhesion deficiency [Irish Setter]

## **Secondary Immunodeficiency**

- Malnourishment
- Viral Immunosuppression
  - FeLV/FIV [Cat]
  - Canine distemper virus [Dog]
  - Parvovirus
- Drug-induced immune suppression
  - Glucocorticoids
  - Cytostatics
  - Oestrogens
- Associated microbes
 

### **Bacteria**

  - Listeria sp. [Dog]
  - Pseudomonas sp.
  - Staphylococcus sp.
  - Nocardia sp.

### **Rickettsia**

- (Ehrlichia sp. [Dog])

### **Fungi**

- Microsporum sp.
- Trichophyton sp.
- Aspergillus sp.
- Candida sp.
- Cryptococcus sp.

### **Parasites**

- Demodex sp.
- Toxoplasma sp.
- Pneumocystis sp.
- Other causes
  - Splenectomy
  - Bone marrow damage
  - Malignant tumours
  - Diabetes mellitus
  - Hyperoestrogenism
  - Liver cirrhosis
  - Chronic renal failure

## **Diagnostic Approach**

*Infections, recurrent*

### **1. Case History**

- Ehrlichia Antibodies [Dog]
- Aspergillus Antibodies [Dog]

### **2. General Examination**

### **4. Urinalysis**

- Urine dip stick
- Specific gravity
- Urine sediment

### **3. Blood Tests**

- Hct, Ery, Leuc
- Diff BC
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- Serum electrophoresis
- Immunoelectrophoresis

### **5. X-Ray Study**

- Thorax
- Abdomen

### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Toxoplasma Antibodies

### **6. Ultrasound**

- Abdomen
- Heart

**Further Tests**

- Canine distemper antigen  
(Conjunctival smear) [Dog]
- Lymph node biopsy/cytology
- Blood culture
- Bone marrow biopsy/cytology

## Performance Insufficiency

Performance dependent exhaustion and muscle weakness

**Common Causes**

Dog	Cat
+++ Congestive heart failure	+++ Congestive heart failure
++ Respiratory Tract Disease	++ Respiratory Tract Disease
++ Metabolic Causes	++ Metabolic Causes
++ Neuromuscular Causes	++ Neuromuscular Causes

### Cardiovascular Causes

**Congenital Heart Disease**

- Patent ductus arteriosus (PDA)
- (Sub-)Aortic stenosis
- Stenosis of the pulmonary artery
- Atrial Septal Defect (ASD)
- Ventricular Septal Defect (VSD)
- Valval dysplasia
- Tetralogy of Fallot
- Patent right aortic arch (Right sided aorta)
- Endocardial fibroelastosis
- Ebstein anomaly
- Transposition of the large vessels
- Anomalous pulmonary venous connection

**Myocardial Disease**

- Primary Cardiomyopathy

- Dilated cardiomyopathy
- Hypertrophic cardiomyopathy [esp Cat]
- Restrictive cardiomyopathy

**Secondary Cardiomyopathy**

- Metabolic causes
  - Hyperthyroidism [Cat]
  - Hypothyroidism [Dog]
  - Hypo-/Hyperkalaemia
  - Hypo-/Hypercalcemia
  - Diabetes mellitus
  - Hypercortisolism (Cushing's Disease) [Dog]
  - Uraemia
  - Renal hypertension
  - Glycogen storage disease
- Alimentary Causes
  - Taurine deficiency [esp Cat]
  - Carnitine deficiency [esp Dog]
- Viral myocarditis

- Parvovirus
- Canine Distemper Virus [Dog]
- Herpesvirus
- Bacterial endocarditis/ myocarditis
  - Aerobes/Aeranaerobes
  - Lyme Borreliosis sp. [Dog]
  - Endotoxaemia
- Mycotic myocarditis
  - Cryptococcus sp. [Cat]
- Parasitic myocarditis
  - Toxoplasma sp.
  - (Hepatozoon sp. [Dog])
  - (Trypanosoma sp. [Dog])
  - Immunoreactive myocarditis
  - Polyarteritis nodosa
  - Lupus erythematosus
- Toxic myocarditis/ myocarditis
  - Doxorubicin
  - Heavy metals
- Traumatic myocarditis
  - Contusion
  - Atrial rupture

## Valvular Heart Disease

- Mitral Valve Disease
  - Dysplasia
  - Endocarditis
  - Fibrosis
  - Functional dilation of the valvular annulus
- Valvular Pulmonary Stenosis Dysplasia
- Tricuspid Valve Disease
  - Dysplasia
  - Endocarditis
  - Fibrosis

- Functional dilation of the valvular annulus
- Valvular Aortic stenosis Dysplasia
- Rupture of the Papillary Muscle

## Cardiac/Pericardial tumours

- Haemangiosarcoma [esp Dog]
  - Right sided atrial myxoma [Dog]
  - Heart base tumour (Chemodectoma) [Dog]
- Tumour metastasis
- Thyroid carcinoma
  - Mesothelioma
  - Cysts

## Pericardial Disease (Pericardial Effusion) Modified Transudate

- Congestive heart failure
- Uraemia
- Hypoalbuminaemia
- Cardiac arrhythmias
- Pericardiophrenic hernia

## Exudate

- Tumours
- Pericarditis
  - Canine Distemper Virus [Dog]
  - FIP Coronavirus [Cat]
  - Leptospira sp. [Dog]
  - Actinomyces sp.
  - Nocardia sp.
  - Mycobacterium sp.
  - Toxoplasma sp.
  - Pasteurella sp.

- Streptococcus spp.
- Staphylococcus spp.
- E. coli
- Cryptococcus sp. [Cat]

## Blood

- Atrial rupture
- Haemangiosarcoma [Dog]
- Coagulopathies
- Foreign bodies

## Arterial Thromboembolism

- Feline Aortic thromboembolism
  - Hypertrophic cardiomyopathy
  - Restrictive cardiomyopathy
  - Dilated cardiomyopathy
- Bottom hung window syndrome [Cat]
- Pulmonary thromboembolism
  - (Dirofilaria sp. [esp Dog])
  - (Angiostrongylus sp. [Dog])
  - Hypercortisolism (Cushing's Disease) [Dog]
  - DIC
  - Cardiomyopathy
  - Protein-losing nephropathy
  - Acute Pancreatitis
  - Septicaemia/Endotoxaemia
  - Immune haemolytic Anaemia
  - Bone trauma/surgery
  - Hyperviscosity syndrome

## Pleural/ Mediastinal Causes

### Thoracic effusion Transudate

- Congestive heart failure (Right sided heart failure)

- Hypoalbuminaemia

### Modified Transudate

- Congestive heart failure
- Tumours
- Diaphragmatic hernia
- Pancreatitis
- Autoimmune Diseases
- Hepatic cirrhosis

### Exudate

- FIP Coronavirus [Cat]
- Tumours
- Pyothorax
  - Actinomyces sp.
  - Nocardia sp.
  - Pasteurella sp.
  - Bacteroides sp.
  - Fusobacterium sp.
  - Pneumonia
  - Foreign body perforation
  - Oesophageal perforation
  - Tumour necrosis
  - Thoracocentesis
- Diaphragmatic hernia
- Lung lobe torsion

### Blood

- Lung lobe torsion
- Trauma
- Coagulopathy
- Tumours

### Chyle

- Congestive heart failure
- Tumours
- Trauma
- Lymphangiectasia [Dog]
- Diaphragmatic hernia

- Lung lobe torsion
- (Dirofilaria sp. [esp Dog])

## Pneumothorax

- Traumatic Causes
  - Road traffic accident
  - Window fall [esp Cat]
  - Thoracic penetration
  - Thoracocentesis
  - Pressure ventilation
  - Oesophageal penetration
  - Tracheal penetration
  - Perforating rib fracture
  - Lung contusion/ Pleural rupture
- Spontaneous Causes
  - Pneumonia
  - Bullous emphysema
  - Larva migrans
  - Mycotic Granulomata
  - Pulmonary tumours
  - Pulmonary abscesses
  - Pulmonary cyst
  - Foreign bodies

## Mediastinal Tumours

- Lymphadenopathy
- Lymphosarcoma [esp Cat]
- Heart base tumour (Chemodectoma) [Dog]
- Thyroid carcinoma
- Thymoma
- Mediastinal cysts
- Mesothelioma

## Diaphragmatic Elevation

- Diaphragmatic rupture
- Gastric dilation/volvulus [Dog]
- Hepatomegaly

- Diaphragmatic paralysis
- Intraabdominal tumour
- Marked abdominal effusion

## Pulmonary Causes

### Pulmonary Oedema

#### ↑ Hydrostatic pressure

- Left Sided Heart Failure
  - Dilated cardiomyopathy
  - Hypertrophic cardiomyopathy
  - Restrictive cardiomyopathy
  - Mitral valve disease
  - (Sub)Aortic stenosis
  - Ventricular septal defect
  - Patent ductus arteriosus (PDA)
- Overinfusion (esp Dextrans, full blood)
- Anaphylaxis
- Hyperthyroidism [Cat]
- Hypertension [esp Cat]
- Cardiac arrhythmias
- Rupture of the papillary muscle

#### ↓ Hydrostatic pressure

- Hypoalbuminaemia + overinfusion

#### ↑ Permeability

- Pneumonia
- Aspiration pneumonia/Smoke inhalation/irritant gases
- Uraemia
- Endotoxins
- DIC
- Lung contusion
- Seizures
- Acute Pancreatitis
- Traumatic brain injury
- Anaphylaxis

- Drowning
- Electrical shock
- Snake venom
- O<sub>2</sub> Poisoning

## Pneumonia

- Viral Pneumonia
  - Canine Distemper Virus [Dog]
  - CAV-1 (Hepatitis c. c.) [Dog]
  - Cat Flu [Cat]
  - FIP Coronavirus [Cat]
  - FeLV/FIV [Cat]
  - Kennel cough [Dog]
- Bacterial Pneumonia
  - Bordetella sp.
  - E. coli
  - Klebsiella sp.
  - Pseudomonas sp.
  - Pasteurella sp.
  - Staphylococcus sp.
  - Streptococcus sp.
  - Mycoplasma sp.
  - Mycobacterium spp.
  - Chlamydia sp.
- Immunoreactive Pneumonia
  - Atopy/Inhalation Allergy
  - Bacterial/Fungal/Parasitic Allergy
  - Drug Allergy
  - Lupus Erythematosus
- Aspiration pneumonia
  - Megaoesophagus
  - Drug/Contrast Medium administration
  - Force Feeding
- Rickettsial Pneumonia
  - (Ehrlichia sp. [Dog])
  - (Rickettsia sp. [Dog])

- Parasitic Pneumonia
  - Toxoplasma sp.
  - Pneumocystis sp.
  - Capillaria sp.
  - Filaroides sp.
  - Aelurostrongylus sp. [Cat]
  - (Crenosoma sp. [Dog])
  - (Angiostrongylus sp. [Dog])
  - (Dirofilaria sp. [esp Dog])
  - (Paragonimus sp.)
  - Larva migrans
- Mycotic Pneumonia
  - Cryptococcus sp. [Cat]
  - (Histoplasma sp.)
  - (Blastomyces sp.)
  - (Coccidioides sp.)
  - Facultative pathogenic fungi
- Toxic Pneumonia
- Smoke inhalation/Irritant gases
- Uraemia
- Other causes
  - IgA deficiency
  - Dyskinesia of the ciliated epithelium
  - Foreign Bodies

## Pulmonary Tumours

- Tumour metastases
  - Thyroid Carcinoma
  - Mammary Carcinoma
  - Haemangiosarcoma
  - Squamous Cell Carcinoma
  - Transitional Cell Carcinoma
  - Melanoma
  - Lymphosarcoma
  - Malignant Histiocytosis [Bernese Mountain Dog]
- Primary Tumours

- Adenocarcinoma
- Squamous Cell Carcinoma

## Other Causes

- Pulmonary Haemorrhage
  - Pulmonary Contusion
  - Lung Lobe Torsion
  - Foreign Body
  - Coagulopathies
  - Pneumonia
  - Pulmonary Abscess
  - Pulmonary Tumours
- Atelectasis
- Emphysema
- Pulmonary Fibrosis

## Metabolic Causes

### Endocrine Diseases

- Hypothyroidism [Dog]
- Hypercortisolism (Cushing's Disease) [Dog]
- Diabetes mellitus
- Hyperthyroidism [Cat]
- Hypocortisolism (Addison's Disease) [Dog]

### Electrolyte Disturbances

- Hyperkalaemia
- Hypokalaemia
- Hypercalcaemia
- Hypocalcaemia
- Hypernatraemia

## Neuromuscular Causes

### Polyneuropathy

- Infectious Causes
  - FeLV/FIV [Cat]
  - Toxoplasma sp.

- Neospora sp. [Dog]
- Immunoreactive Causes
  - Lupus erythematosus
- Metabolic Causes
  - Diabetes mellitus
  - Hypercortisolism (Cushing's Disease) [esp Dog]
  - Hypothyroidism [Dog]
- Toxic Causes
  - Organophosphate Poisoning (chronic)
  - Lead Poisoning
  - Cytostatics
  - Lindane
  - Botulism toxin
  - Tick toxin (Tick paralysis)
- Congenital Causes
  - Axonopathy
  - Demyelinisation Diseases
  - Lysosomal Storage Disease
  - Spinal Muscular Atrophy
- Other Causes
  - Nerve Root Compression Syndrome
  - Feline Dysautonomia [Cat]
  - Polyneuritis/  
Polyradiculoneuritis [Dog]

### Junctionopathy (Neuromuscular Junction)

- Myasthenia gravis
  - acquired
  - congenital

### Polymyopathy

- Infectious Causes
  - Toxoplasma sp.
  - Neospora sp. [Dog]
  - Lyme Borreliosis sp. [Dog]
  - Leptospira sp. [Dog]

- Immunoreactive Causes
  - Lupus Erythematosus
  - Eosinophilic Myositis [Dog]
- Metabolic Causes
  - Hypokalaemia [esp Cat]
  - Hypercortisolism (Cushing's Disease) [esp Dog]
  - Hypothyroidism [Dog]
  - Hypoglycaemia
  - Vit E-/Selenium Deficiency
- Congenital Causes
  - Muscular Dystrophy
- Dermatomyositis [Collie]
- Glycogen Storage Disease

## Other Causes

- Anaemia
- Infectious Diseases
- Organ Failure
- Bone/Joint Diseases
- Spinal Diseases
- Tumour Diseases
- Psychogenic Causes
- Age
- Drug Side Effects

## Diagnostic Approach

### *Performance Insufficiency*

- 1. Case History**
- 2. General Examination**
- 3. Neurological Examination**
- 4. Orthopaedic Examination**
- 5. X-Ray Study**

- Thorax
- Abdomen

- 6. ECG**

- 7. Ultrasound**

- Heart (Doppler Echocardiography)
- Abdomen

- 8. Blood Tests**

- Hct, Ery, Leuc, Hb
- Na, K, Ca, P
- TP, Alb, Glob
- GPT, AP, Urea, Crea
- BG, CK

- Diff BC
- FIP Profile [Cat]
- α HBDH
- Troponin
- ANP

### MICROBIAL SEROLOGY

- FeLV-/FIV Antigen [Cat]
- Toxoplasma Antibodies
- Dirofilaria Antigen [Dog]
- Lyme-Borreliosis Antibodies [Dog]
- Ehrlichia Antibodies [Dog]

### IMMUNOSEROLOGY

- ANA Test
- Autoantibodies against Acetyl-choline Receptors (Myasthenia gravis detection)

### FUNCTION TESTS

- Adrenal Gland Function Tests [Dog]

- Dexamethasone Suppression test
- ACTH Stimulation test
- Cortisol/Creatinine Ratio
- T<sub>4</sub>, fT<sub>4</sub>

TSH-/TRH Stimulation test [Dog]

- Thyroglobulin Antibodies

#### FURTHER TESTS

- Tensilon Test (Myasthenia gravis Test) [Dog]

#### 9. Urinalysis

- Urine dip stick
- Specific gravity
- Urine sediment

#### 10. Further Tests

- Non-selective Angiography
- Electromyogram (EMG)
- Muscle Biopsy
- Body Cavity Fluid Analysis

## Lymph Node Enlargement, Peripheral

**Lymphadenopathy:** Swelling of the palpable peripheral lymph nodes:

- Lnn. parotidei
- Lnn. mandibulares
- Lnn. retropharyngei laterales
- Lnn. cervicales superficiales
- Lnn. axillares
- Lnn. inguinales superficiales
- Lnn. poplitei

#### Common Causes

Dog	Cat
+++ Tumour metastasis (esp lymphatic leukaemia)	++ Infectious Diseases
++ Infectious Diseases	++ Tumour metastasis
++ Autoimmune Diseases	++ Autoimmune Diseases

## Generalised Lymphadenopathy

#### Infectious Causes

- Parasitic Infections
  - Demodex sp.
  - Sarcoptes sp.
  - Toxoplasma sp.
  - Babesia sp. [esp Dog]
  - Leishmania sp. [esp Dog]

- Rickettsial Infections
  - (Ehrlichia sp. [Dog])
  - (Rickettsia sp. [Dog])
- Mycotic Infections
  - Cryptococcus sp. [Cat]
  - Sporothrix sp. [Cat]
  - (Histoplasma sp.)
  - (Blastomyces sp.)
- Viral Infections

- FeLV/FIV [Cat]
- FIP Coronavirus [Cat]
- Bacterial Infections

### **Immunoreactive Causes**

- Feline hypereosinophilic syndrome [Cat]
- Lupus erythematosus
- Rheumatoid Arthritis
- Allergy

### **Tumorous Causes**

- Lymphatic Leukaemia
- Tumour metastasis

### **Localised Lymphadenopathy**

- Infection of the localised drainage region (abscess)
- Tumour metastasis of the local drainage region

## **Diagnostic Approach**

### *Lymphadenopathy, Peripheral*

#### **1. Case History**

#### **2. General Examination**

#### **3. Lymph Node Biopsy**

- Cytology
- Leishmania amastigote
- Tumour cytology
- Bacterial/Fungal/Protozoal Culture

#### **4. X-Ray Study**

- Thorax
- Abdomen
- Spine

#### **5. Blood Tests**

- Hct, Ery, Leuc
- Diff BC (+ Cytology)
- TP, Alb, Glob
- Serum electrophoresis
- GPT, AP, Urea, Crea, BG
- FIP Profile [Cat]
  - TP
  - Alb/Glob Ratio
  - Bili/GOT
  - Serum electrophoresis

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Toxoplasma Antibodies
- Ehrlichia Antibodies [Dog]
- Leishmania Antibodies [Dog]
- Brucella Antibodies [Dog]
- Lyme Borreliosis Antibodies [Dog]
- Canine Herpes virus Antibodies [Dog]

#### **IMMUNOSEROLOGY**

- ANA Test
- Rheumatoid factor

#### **6. Urinalysis**

- Urine dip stick
- Specific gravity
- Urine sediment
- Bence-Jones Proteins

#### **7. Further Tests**

- Bone marrow biopsy/cytology
- Ultrasound
- Arthrocentesis/Synovial analysis

## Oedema, subcutaneous

Extravascular collection of fluid in subcutaneous tissues

Common Causes	
Dog	Cat
++ Lymphoedema	++ Lymphoedema
+ Congestive heart failure	+ Congestive heart failure

### Localised Oedema

#### ↑ Hydrostatic Pressure

- Venous Thrombosis
- Tumours (esp Mammary)
- Arteriovenous Anastomosis

#### Disturbance of the Localised Permeability

- Trauma
- Surgical procedure
- Burns
- Cellulitis/Abscess
- Tumours
- Insect bite/sting
- Vaccine reaction
- Snake Venom
- Lymphangitis
- Lymphangioma/-sarcoma

### Generalised Oedema

#### ↑ Hydrostatic Pressure

- Right Sided Heart Failure
- Biventricular Congestive Heart Failure
- Right atrial/Vena cava Obstruction
  - (Dirofilaria sp. [esp Dog])

- (Angiostrongylus sp. [Dog])
- Tumours
- Thrombosis

- Overinfusion in case of Oliguria/Anuria
- Hypoalbuminaemia

#### ↓ Oncostatic Pressure (Hypoalbuminaemia)

- Hepatic cirrhosis/portocaval Shunt
- Exsudative body cavity effusion
- Cachexia/Marasmus
- Protein-losing enteropathy
- Protein-losing nephropathy
- Burns

### Permeability Disturbances

- Septicaemia/Endotoxaemia
- Vasculitis
  - FIP Coronavirus [Cat]
  - Canine Coronavirus [Dog]
  - Septicaemia/Endotoxaemia
  - Polyarteritis nodosa
  - Allergy
  - Lupus erythematosus

- Rheumatoid Arthritis
- Uraemia
- Tumours
- (Ehrlichia sp. [Dog])
- (Rickettsia sp. [Dog])
- Trauma
- Burns
- Snake Venom
- Trauma
- Infiltrating Tumours
- Lymphangioma/-sarcoma
- Lack of exercise
- Congenital aplasia of lymphatic vessels

## Myxoedema

- Hypothyroidism [Dog]

## Lymphoedema

- Lymphostasis/Lymphatic obstruction

## Diagnostic Approach

### *Oedema, subcutaneous*

#### 1. Case History

- Bili
- GOT
- Serum electrophoresis

#### 2. General Examination

#### MICROBIAL SEROLOGY

- FeLV-/FIV Antigen [Cat]
- Dirofilaria Antigen [Dog]

#### 3. X-Ray Study

- Thorax
- Abdomen

#### 4. Blood Tests

- Hct, Ery, Leuc
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- Diff BC
- FIP Profile [Cat]
  - TP
  - Alb/Glob Ratio

#### Ultrasound

- Heart (Doppler Echocardiography)
- Abdomen

#### Further Tests

- Lymphangiography
- Faecal Examination

## Sleep Disturbances

**Insomnia:** Sleeplessness/Nocturnal Unrest

**Hypersomnia:** Lethargy/Excessive Sleep/Somnolence

**Sleep attacks:** Bouts of periodically recurring sleeping episodes

**Syncope:** Spontaneous, reversible and short acting loss of consciousness

**Coma:** Deep unconsciousness with resistance to external stimuli

**Narcolepsy:** Transient sleep attack (can be aroused)

**Cataplexy:** Sudden and severe loss of muscle tone

## Insomnia

- Congestive Heart Failure
- Arterial Hypertension [esp Cat]
- Respiratory Disease
- Painfulness
- Pruritus
- Hyperthyroidism [Cat]
- Drugs
  - Aminophylline
  - Caffeine
  - Amphetamines
  - Vitamin C
  - Glucocorticoids
- Central nervous Disease
- Seizures

## Sleep Attacks

- Narcolepsy
- Cataplexy
- Syncope
- Seizures

## Hypersomnia

- Systemic Disease
- Chronic Renal Failure
- Hypothyroidism [Dog]
- Central nervous Disease
- Electrolyte Imbalance
- Coma
- Shock
- Drugs
  - Sedatives/Anaesthetics
  - Anticonvulsants
  - Antihistamines

## Diagnostic Approach

### Sleep Disturbances

- 1. Case History**
- 2. General Examination**
- 3. Neurological Examination**
- 4. X-Ray Study**
  - Thorax
  - Abdomen
- 5. Blood Tests**
  - Hct, Ery, Leuc, Hb
  - TP, Alb, Glob

- GPT, AP, Urea, Crea, BG
- Na, K, Ca
- Diff BC

### MICROBIAL SEROLOGY

- FeLV-/FIV Antigen [Cat]

### FUNCTION TESTS

- T<sub>4</sub>, fT<sub>4</sub>
- TSH-/TRH Stimulation test [Dog]
- T<sub>3</sub> Suppression test [Cat]

**6. Urinalysis**

- Urinary output/volume

- Urine dip stick
- Specific gravity
- Urine sediment

**Mucous Membrane Colour, abnormal**

Alteration of the physiological mucous membrane colour (pink)

**Pallor****Shock**

- Hypovolaemic Shock
- Anaphylactic Shock
- (Septic/Endotoxic Shock)
- Cardiogenic Shock
- Neurogenic Shock

**Anaemia**

- Haemolytic Anaemia
- Blood Loss/Anaemia
- Aplastic Anaemia/Bone marrow failure
- Nutritional Anaemia

**Red****Ocular Disease**

- Conjunctivitis/Keratitis
- Uveitis
- Glaucoma

**Other Causes**

- Excitement
- Septicaemia
- Polycythaemia
- CO Intoxication

**Yellow****Icterus/Jaundice**

- Prehepatic Icterus
- Hepatocellular Icterus
- Posthepatic Icterus

**Blue****Cyanosis**

- Central Cyanosis
  - Heart Disease
  - Respiratory Disease
  - Pulmonary Disease
  - Other Diseases
- Peripheral Cyanosis
- Venous Thrombosis

**Shock**

Life-threatening circulatory failure with hypoperfusion and hypoxic cellular damage as a result of hypoxia

**Clinical Shock Symptoms:**

- Pale mucous membranes (*not* with septic shock, *not* in decompensated shock)
- Weak pulse (hypotension)
- Delayed capillary refill time
- Tachycardia Tachypnoea
- Hypothermia (Hyperthermia with septic shock)
- Low peripheral body temperature
- Oliguria
- Thirst

**Hypovolaemic Shock****Blood Loss**

- Traumatic Organ/ Blood Vessel Rupture
- Epistaxis
- Coagulopathy
- Bleeding Ulcer
- Bleeding Tumour
- Gastrointestinal haemorrhage
- Bleeding Urinary Tract

**Plasma Loss**

- Extensive Burns
- Extensive Wounds
- Protein-Losing Enteropathy (esp Parvovirosis)
- Protein-Losing Nephropathy
- Chronic fistula
- Effusion into body cavity

**Fluid Loss**

- Vomitus
- Diarrhoea
- Diuretics
- Fever
- Effusion into body cavity

**Septic/Endotoxic Shock****Bacteriaemia**

- E. coli
- Staphylococcus sp.
- Salmonella spp.
- Pseudomonas sp.

**Risk Factors**

- Abscesses
- Urinary Tract Infection
- Bile Duct Infection
- Pneumonia
- Peritonitis
- Pyometra
- Haemorrhagic Gastroenteritis
- Gastric Dilation/Volvulus [Dog]
- Ileus
- Surgery
- Immunosuppression
- Hypercortisolism (Cushing's Disease) [Dog]
- Tumour Disease
- Venous Catheter
- Diabetes mellitus

## Anaphylactic Shock

- Drugs
  - Penicillins
  - Cephalosporins
  - Sulfonamides
  - Local anaesthetics
  - Dextran
  - Organ extracts
  - Vaccines
  - Iodine Preparations
  - Vitamin K1 (i.v.)
  - Radiographic Contrast Medium
  - Hypo-sensitisation antigens
  - Blood Transfusion
- Insect / Snake Venoms
- Toxic Plants

## Cardiogenic Shock

### Congenital Heart Disease

- Patent ductus arteriosus (PDA)
- (Sub)Aortic Stenosis
- Pulmonary Stenosis
- Atrial Septal Defect (ASD)
- Ventricular Septal Defect (VSD)
- Valve dysplasia
- Tetralogy of Fallot
- Endocardial Fibroelastosis

### Myocardial Disease

#### Primary Cardiomyopathy

- Dilated Cardiomyopathy
- Hypertrophic Cardiomyopathy [esp Cat]
- Restrictive Cardiomyopathy
- Secondary Cardiomyopathy
- Metabolic Causes
  - Hyperthyroidism [Cat]
  - Hypothyroidism [Dog]

- Hypo-/Hyperkalaemia
- Hypo-/Hypercalcaemia
- Diabetes mellitus
- Hypercortisolism (Cushing's Disease) [Dog]
- Uraemia
- Renal Hypertension
- Glycogen Storage Disease
- Alimentary Causes
  - Taurine Deficiency [esp Cat]
  - Carnitine Deficiency [esp Dog]
- Viral Myocarditis
  - Parvovirus
  - Distemper Virus [Dog]
  - Herpes Virus
- Bacterial Endo-/Myocarditis
  - Aerobics/Aerobic
  - Lyme Borrelia sp. [Dog]
  - Endotoxaemia
- Mycotic Myocarditis
  - Cryptococcus sp. [Cat]
- Parasitic Myocarditis
  - Toxoplasma sp.
  - (Hepatozoon sp. [Dog])
  - (Trypanosoma sp. [Dog])
- Immunoreactive Myocarditis
  - Polyarteritis nodosa
  - Lupus erythematosus
- Toxic Myocarditis/
  - Myocarditis
  - Doxorubicin
  - Heavy metals
- Traumatic Myocarditis
  - Contusion
  - Atrial Rupture

### Heart Valve Disease

- Mitral Valve Insufficiency
  - Dysplasia

- Endocarditis
- Fibrosis
- Functional dilation of the annular ring
- Valvular Stenosis of the Pulmonary Artery
- Tricuspid Valve Insufficiency
  - Dysplasia
  - Endocarditis
  - Fibrosis
  - Functional dilation of the annular ring
- Valvular Aortic Stenosis
- Papillary Muscle Rupture
- Staphylococcus sp.
- E. coli
- Pasteurella sp.
- Mycobacterium sp.
- Actinomyces sp.
- Nocardia sp.
- Mycotic Pericarditis
  - Cryptococcus sp.
- Parasitic Pericarditis
  - Toxoplasma sp.
- Traumatic Pericarditis/ Pericardial Rupture
- Pericardial Tumours
  - Haemangiosarcoma
  - Heart Base Tumour (Chemodectoma)
  - Thyroid Carcinoma
  - Mesothelioma
  - Lymphosarcoma
  - Tumour Metastasis

## **Pericardial Disease**

- Viral Pericarditis
  - FIP Coronavirus [Cat]
- Bacterial Pericarditis
  - Streptococcus sp.

## **Diagnostic Approach**

### *Shock*

- 1. Case History**
- 2. General Examination**
- 3. ECG**
- 4. Blood Tests**
  - Hct, Ery, Leuc, Hb
  - Na, K, Ca, P
  - TP, Alb, Glob
  - GPT, AP, Urea, Crea, BG
  - Diff BC
- 5. X-Ray Study**
  - Thorax
  - Abdomen

### **6. Ultrasound**

- Heart (Doppler Echocardiography)
- Abdomen

### **7. Urinalysis**

- Urinary output/volume
- Urine dip stick
- Specific gravity
- Urine sediment

## 2 Cardiovascular Principal Symptoms

---

Cardiac/Respiratory Arrest .....	47
Heart Murmurs.....	49
Cardiac Arrhythmias.....	52
Heart Sounds, Pathological .....	56
Cardiomegaly .....	58
Hypertension, Arterial .....	61
Pulse Alterations .....	63
Syncope.....	64
Pericardial Effusion .....	66
Thromboembolism, Arterial .....	66
Cyanosis .....	68

## Further Relevant Principal Symptoms

Hepatomegaly (Ch. 1: General Symptoms) .....	
Abdominal Effusion (Ch. 1: General Symptoms).....	
Performance Insufficiency (Ch. 1: General Symptoms) .....	
Oedema, subcutaneous (Ch. 1: General Symptoms) .....	
Sleep Disturbances (Ch. 1: General Symptoms).....	
Dyspnoea (Ch. 3: Respiratory Principal Symptoms) .....	
Pulmonary Oedema (Ch.3: Respiratory Principal Symptoms) .....	
Cough (Ch. 3: Respiratory Principal Symptoms) .....	

## Cardiac/Respiratory Arrest

Absent respiration, pulse and heart sounds (asystole, ventricular fibrillation, electromechanical dissociation)

<b>Common Causes</b>	
Dog	Cat
+++ Trauma	+++ Trauma
++ Anaesthetic Incident	++ Anaesthetic Incident
++ Respiratory Tract Obstruction	++ Respiratory Tract Obstruction
++ Congestive Heart Failure	++ Congestive Heart Failure
++ Cardiac Arrhythmias	++ Cardiac Arrhythmias

## Primary Cardiac Causes

### Heart Disease

- Dilated Cardiomyopathy
- Hypertrophic Cardiomyopathy [esp Cat]
- Heart Tumours/Thrombosis
- Pericardial Effusion
- Congenital Heart Disease
- Valvular Heart Disease
- Infectious Myocarditis
- Toxic Myocarditis/  
Myocarditis
- Atrial Rupture
- Rupture of the Papillary  
Muscle

### Cardiac Arrhythmias

- Heart Disease
- Acidosis/Aalkalosis
- Hyper-/Hypokalaemia
- Hypocalcaemia
- Hypomagnesaemia
- Hypovolaemia
- Septicaemia/Endotoxaemia
- Hypoxia
- Anaemia
- Anaesthetic Incident
- Trauma
- Electrical Shock
- Hypothermia

## Primary Respiratory Causes

### Respiratory Tract Obstruction

- Foreign body
- Blocked endotracheal tube
- Trauma
- Glottal oedema
- Tumours
- Tracheal collapse
- Recurrent laryngeal nerve  
paralysis [large dog breeds]

### Pulmonary Disease

- Pneumonia
- Pulmonary Tumours
- Pulmonary Oedema
- Pulmonary haemorrhage
- Anaphylaxis
- Pulmonary thromboembolism
- Atelectasis
- Emphysema

### Thoracic Disease

- Pneumothorax
- Pleural Effusion
- Diaphragmatic hernia/rupture
- Mediastinal Tumours
- Diaphragmatic Paralysis

## Primary Neurological Causes

### Cerebral Disease

- Traumatic brain injury
- Brain tumours
- Cerebral oedema
- Encephalitis
- Cerebral haemorrhage/abscess

### Cervical Spine Disease

- Trauma/Vertebral fracture or luxation
- Haematoma/Abscess
- Disc prolapse
- Fibrocartilaginous Embolism
- Tumours

## Diagnostic Approach

### *Cardiac/Respiratory Arrest*

(following successful reanimation and intensive care monitoring)

#### 1. ECG

- Blood gas analysis (BGA)
- Blood Sedimentation Rate (BSR)
- Diff BC

#### 2. Case History

#### MICROBIAL SEROLOGY

- FeLV-/FIV Antigen [Cat]

#### 3. General Examination

#### 6. Urinalysis

- Urinary output/volume
- Urine dip stick
- Specific gravity
- Urine sediment

#### 4. X-Ray Study

#### 7. Ultrasound

- Thorax
- Abdomen
- Skull
- Cervical Spine

- Analysis of body cavity fluid

#### 5. Blood Tests

- Hct, Ery, Leuc, Hb
- Na, K, Ca, P, Mg
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG

## Heart Murmurs

Heart sound audible during auscultation caused by turbulence, noticeable either between the 1<sup>st</sup> and 2<sup>nd</sup> heart beat (systolic murmur), between the 2<sup>nd</sup> and 1<sup>st</sup> heart beat (diastolic murmur) or continuously (machinery murmur)

<b>Common Causes</b>	
Dog	Cat
+++ Mitral valve insufficiency	+++ Hypertrophic Cardiomyopathy
++ Dilated Cardiomyopathy	++ Restrictive Cardiomyopathy
++ Fever/A anaemia	++ Arterial Hypertension
++ Congenital heart disease	++ Cor pulmonale
+ Cor pulmonale	++ Fever/A anaemia
	++ Congenital heart disease

## Systolic Murmur

### Left Cranial

#### (2<sup>nd</sup>–4<sup>th</sup> Intercostal Space)

- (Sub)Aortic Stenosis
  - Dysplasia (congenital)
- Pulmonary Stenosis
  - Dysplasia (congenital)
  - *Aelurostrongylus* sp. [Cat]
  - (*Dirofilaria* sp. [esp Dog])
  - *Angiostrongylus* sp. [Dog]
- Other Causes
  - Physiological ejection phase murmur [puppies]
  - Anaemia/Hypoxia
  - Fever
  - Hyperthyroidism [Cat]
  - Hypertrophic Cardiomyopathy [esp Cat]
  - Pregnancy
  - III. degree AV block
- Tetralogy of Fallot
  - 1. Pulmonary Stenosis
  - 2. Ventricular Septal Defect
  - 3. Right ventricular Hypertrophy
  - 4. Overriding Aorta

### Left Caudal

#### (5<sup>th</sup>–6<sup>th</sup> Intercostal Space)

- Mitral valve insufficiency
  - Endocarditis
  - Fibrosis
  - Dysplasia (congenital)
  - Functional dilation of the valvular anulus

### Right Cranial

#### (2<sup>nd</sup>–4<sup>th</sup> Intercostal Space)

- (Sub)Aortic Stenosis
- Ventricular Septal Defect

### Right Caudal

#### (5<sup>th</sup>–6<sup>th</sup> Intercostal Space)

- Tricuspid valve insufficiency
  - Endocarditis
  - Fibrosis
  - Dysplasia (congenital)
  - Functional dilation of the valvular anulus

## Diastolic Murmur

### Left Cranial

#### (2<sup>nd</sup>–4<sup>th</sup> Intercostal Space)

- Aortic valve insufficiency

- Bacterial endocarditis
- Fibrosis
- Functional dilation of the valvular anulus
- Pulmonary valve insufficiency
  - Bacterial endocarditis
  - Aelurostrongylus sp. [Cat]
  - (Dirofilaria sp. [esp Dog])
  - Angiostrongylus sp. [Dog]
- Other causes
  - Atrial Tumours
  - Anaemia
  - Ventricular Septal Defect
  - Atrial Septal Defect

### **Left Caudal (5<sup>th</sup>–6<sup>th</sup> Intercostal Space)**

- Mitral valve stenosis

### **Right Caudal (5<sup>th</sup>–6<sup>th</sup> Intercostal space)**

- Tricuspid valve stenosis

### **Continuous Murmur (Machinery Murmur)**

### **Left Cranial (2<sup>nd</sup>–4<sup>th</sup> Intercostal Space)**

- Patent ductus arteriosus (Left-Right Shunt)

### **Other Sounds**

- Pericardial Sounds
  - Pericarditis
  - Pericardial Tumours
  - Pericardial Rupture
- Respiratory Sounds
- Thoracic Rubbing Sounds
- Extrathoracic Sounds

## **Diagnostic Approach**

### **Heart Murmurs**

- 1. Case History**
- 2. General Examination**
- 3. X-Ray Study**
  - Thorax
  - Abdomen
- 4. ECG**
- 5. Ultrasound**
  - Heart (Doppler-Echocardiography)
  - Abdomen

### **6. Blood Tests**

- Hct, Ery, Leuc, Hb
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- Na, K, Ca, Mg
- Diff BC
- Blood Gas Analysis (BGA)
- α HBDH
- Troponin
- ANP

### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]

- Dirofilaria Antigen [Dog]

#### **FUNCTION TESTS**

- T<sub>4</sub>, fT<sub>4</sub> [Cat]
- T<sub>3</sub> Suppression Test [Cat]

#### **7. Urinalysis**

- Urinary output/volume
- Urine dip stick

- Specific gravity

#### **8. Further Tests**

- Examination of the ocular fundus
- Blood Pressure Measurement (indirect/direct)
- Non-selective angiography
- Analysis of body cavity fluid

## **Cardiac Arrhythmias**

#### **Physiological Heart Rate:**

Dog: 70–160/min Sinus rhythm or respiratory sinus arrhythmia  
(puppies–220/min)

Cat: 160–240/min Sinus rhythm

#### **Common Causes**

Dog	Cat
+++ Mitral valve insufficiency	+++ Hypertrophic Cardiomyopathy
++ Dilated Cardiomyopathy	++ Renal Failure
++ Congenital Heart Disease	++ Hyperthyroidism
++ General Illness	++ Hyper-/Hypokalaemia
+ Drugs (Digoxin intoxication)	++ General Illness

#### **Slow and Regular**

#### **Sinus Bradycardia**

- Regular sinus rhythm
- Physiological
  - Exercise
  - Sleep
- Sick Sinus Syndrome
- Vagal tone
  - Endotracheal tube
  - Cardiac catheter
  - Cerebral Pressure
  - Oropharyngeal Disease
  - Abdominal Pain
- Peritonitis
- Pancreatitis
- Vomitus
- Gastric ulcer
- Carotid Sinus Pressure
- Compression of the eyeball
- Tumours (neck, mediastinum)
- Electrolyte imbalances
  - Hyperkalaemia
  - Hypocalcaemia
- Drugs
  - Digitalis glycosides

- Beta blockers
- Calcium antagonists
- Cimetidine
- Xylazine
- Acepromazine
- Halothan
- Other Causes
  - Myocarditis
  - Endocarditis
  - Cardiomyopathy
  - Heart Tumours
  - Congenital Heart Defect
  - Hypothyroidism [Dog]
  - Uraemia
  - Muscarine Poisoning

### **Sinus Arrest/III. Degree Sinoatrial Block**

- Missing P Waves
- Escape rhythm
- Same causes as Sinus bradycardia

### **II. Degree Atrioventricular Block (Mobitz Type II)**

- P Waves without subsequent QRS-T complexes
- Conduction of only every second, third or fourth atrial impulse
- Vagal Tone
- Hyperthyroidism [Cat]
- Electrolyte Imbalances
  - Hyperkalaemia
  - Hypocalcaemia
- Drugs
  - Digitalis glycoside
  - Beta blockers
  - Calcium antagonists

- Xylazine
- Lidocaine
- Other Causes
  - Myocarditis
  - Cardiomyopathy
  - Heart tumours
  - AV-Node fibrosis
  - Aortic stenosis
  - Ventricular septal defect
  - Muscarine Poisoning

### **III. Degree AV-Block**

- P- and QRS-T complexes are unconnected
- Dissociation between atrial and ventricular activity
- Same causes as II. Degree AV-Block

### **Slow and Irregular**

#### **II. Degree SA Block**

- Periodic or intermittent absence of P-QRS-T complexes
- Same causes as Sinus bradycardia

#### **II. Degree AV Block (Mobitz Type I)**

- Progressively prolonged PQ Interval until absence of QRS complex occurs (Wenckebach Phenomenon) with intermittent absence of one or more QRS-T complexes
- Same causes as II. Degree AV Block

**Absolute Arrhythmia**

- Atrial fibrillation/flutters
- Same causes as atrial flutters/fibrillation

**Fast and Regular****Sinus Tachycardia**

- Regular sinus rhythm
- Physiological
  - Exertion
  - Vegetative
- Drugs
  - Atropine
  - Adrenalin
  - Ephedrine
  - Theophylline
  - Ketamine
  - Cocaine/Amphetamines
  - Caffeine/Nicotine
  - Alcohol
- Other Causes
  - Hyperthyroidism [Cat]
  - Fever
  - Respiratory Disease
  - Congestive Heart Failure
  - Anaemia
  - Hypovolaemia
  - Acidosis
  - Phaeochromocytoma

**Atrial Tachycardia/AV Node Tachycardia**

- Three or more supraventricular extrasystoles
- Same causes as in supraventricular extrasystoles

**Ventricular Tachycardia**

- Ventricular extrasystoles often in rapid succession or Bigeminy-/Trigeminy Rhythms
- Same causes as in ventricular extrasystoles

**Ventricular Pre-excitation (Wolff-Parkinson-White Syndrome)**

- Premature ventricular excitation from the SA node via the Kent Bundle (among others) (Re-entry Mechanism)
- Reduced PQ Interval
- Widened delta Waves (between P- and R-Rise) and QRS complexes
- Congenital Defect
- Other Causes
  - Ventricular septal defect
  - Mitral valve fibrosis
  - Hypertrophic cardiomyopathy [Cat]
  - Hyperthyroidism [Cat]
  - Myocarditis
  - Endocarditis

**Fast and Irregular****Atrial Fibrillation/Flutters**

- Highly frequent atrial fibrillations
- Absent P Waves
- Coarse or fine flutter waves
- Normal QRS-T shape
- Same causes as in supraventricular extrasystoles

## Ventricular Fibrillation

- Highly frequent ventricular contractions/fibrillations
- Chaotic, bizarrely shaped ventricular complexes (Torsade de pointes)
- Often arises out of R-on-T Phenomenon
- Same causes as in ventricular extrasystoles

## Supraventricular Extrasystoles

- Highly frequent atrial contractions
- Distorted and premature P Waves
- Normal QRS-T complexes
- Not fully compensated rest
- Physiological
  - vegetative
- Sick Sinus syndrome
- Electrolyte Imbalances
  - Hypo-/Hyperkalaemia
- Drugs
  - Digoxin intoxication
  - Narcotics
- Other Causes
  - Valvular heart disease
  - Cardiomyopathy
  - Atrial tumours/thrombi
  - Patent ductus arteriosus
  - Hyperthyroidism [Cat]

## Ventricular Extrasystole

- Premature ventricular excitation with electrical

discharge from within the ventricular muscle

- Deformed ventricular complexes
- P Waves disconnected from QRS-T Complexes
- Complete compensatory pause
- Often arises out of R-on-T Phenomenon
- Physiological
  - vegetative
- Electrolyte Imbalance
  - Hypo-/Hyperkalaemia
- Drugs
  - Digitalis glycosides
  - Adrenalin
  - Narcotics
  - Antiarrhythmics
  - Theophylline
- Other Causes
  - Aortic stenosis
  - Myocarditis
  - Cardiomyopathy
  - Heart Tumours
  - Septicaemia/Endotoxaemia
  - Gastric Dilation/ volvulus [Dog]
  - Pyometra
  - Prostatic cysts [Dog]
  - Pancreatitis
  - Anaemia
  - Hypoxia
  - Uraemia
  - Fever
  - Acidosis
  - Seizures
  - Electrical Shock

## Diagnostic Approach

### *Cardiac Arrhythmias*

#### 1. Case History

#### 2. General Examination

#### 3. ECG

#### 4. X-Ray Study

- Thorax
- Abdomen

#### 5. Ultrasound

- Heart (Doppler Echocardiography)

#### 6. Blood Tests

- Hct, Ery, Leuc, Hb
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- Na, K, Ca, Mg
- Diff BC
- Blood Gas Analysis (BGA)
- $\alpha$  HBDH
- Troponin
- ANP

#### MICROBIAL SEROLOGY

- FeLV-/FIV Antigen [Cat]

#### FUNCTION TESTS

- $T_4$ , f $T_4$  [Cat]
- $T_3$  Suppression Test [Cat]

#### FURTHER SEROLOGY

- Serum Digitalis Levels  
(Therapeutic control)

#### 7. Urinalysis

- Urinary output/volume
- Urine dip stick
- Specific gravity

#### 8. Further Tests

- Examination of the ocular fundus
- Blood Pressure Measure (indirect/direct)
- Non-selective angiocardiology
- Analysis of body cavity fluid

## Heart Sounds, Pathological

1. **Heart Sound:** Beginning of the systole (closure of mitral and tricuspid valve)
2. **Heart Sound:** Beginning of the diastole (closure of aortic and pulmonary valve)
3. **Heart Sound:** Fast Ventricular filling phase
4. **Heart Sound:** Atrial contraction

### 1. Heart Sound

- Mitral valve prolapse

#### Loud

- Sympathetic tone
- Hyperthyroidism [Cat]

#### Quiet

- Pericardial effusion
- Thoracic effusion

- Pneumothorax
- Pulmonary emphysema
- Obesity
- Shock
- Mitral valve insufficiency
- Left bundle branch block

**Split**

- Ventricular extrasystoles
- Left-right Shunt
- Right bundle branch block

**2. Heart Sound****Loud**

- Sympathetic tone
- Arterial hypertension [esp Cat]

**Quiet**

- Hypotension
- Shock
- Left sided heart failure

**Split**

- Physiological in large dog breeds
- Pulmonary stenosis
- (Dirofilaria sp. [esp Dog])
- Mitral valve insufficiency
- Ventricular septal defect

- Atrial septal defects
- Ventricular extrasystoles
- Right bundle branch block

**3. Heart Sound**

- Anaemia
- Pregnancy
- Hyperthyroidism [Cat]
- Mitral valve insufficiency
- Tricuspid valve insufficiency
- Hypertrophic cardiomyopathy [esp Cat]
- Left-right Shunt

**4. Heart Sound**

- Pulmonary hypertension
- Pulmonary stenosis
- Arterial hypertension [esp Cat]
- Aortic stenosis
- Hypertrophic cardiomyopathy [esp Cat]
- Papillary muscle rupture
- III. Degree AV Block
- Anaemia
- Hyperthyroidism [Cat]

**Midsystolic Clicks**

- Mitral valve prolapse
- Pericardial adhesions

**Diagnostic Approach***Heart Sounds, Pathological***1. Case History****2. General Examination****3. ECG****4. X-Ray Study**

- Thorax

- Abdomen

### **5. Ultrasound**

- Heart (Doppler  
Echocardiography)

### **6. Blood Tests**

- Hct, Ery, Leuc, Hb
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- Na, K, Ca, Mg
- Diff BC
- Blood Gas Analysis (BGA)
- $\alpha$  HBDH
- Troponin
- ANP

### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Dirofilaria Antigen [Dog]

### **FUNCTION TESTS**

- $T_4$ , f $T_4$  [Cat]
- $T_3$  Suppression Test [Cat]

### **FURTHER SEROLOGY**

- Serum Digitalis Level

### **7. Urinalysis**

- Urinary output/volume
- Urine dip stick
- Specific gravity

### **8. Further Tests**

- Examination of the ocular fundus
- Blood pressure measure (indirect/direct)
- Non-selective angiography
- Analysis of body cavity fluid

## **Cardiomegaly**

Enlargement of the heart

### **Common Causes**

Dog	Cat
+++ Mitral valve insufficiency	+++ Hypertrophic cardiomyopathy
++ Dilated cardiomyopathy	++ Restrictive cardiomyopathy
++ (Sub)Aortic stenosis	++ Mitral valve insufficiency
++ Cor pulmonale	++ Arterial hypertension
++ Pulmonary stenosis	– Renal Failure
++ Ventricular septal defect	– Hyperthyroidism
++ Patent ductus arteriosus	++ Cor pulmonale
++ Atrial tumours	++ Atrial thrombosis
++ Pericardial effusion	

### **Left Atrium**

- Mitral valve insufficiency
- Cardiomyopathy

- Dilated cardiomyopathy
- Hypertrophic cardiomyopathy [esp Cat]

- Restrictive cardiomyopathy
- Atrial tumours
  - Haemangiosarcoma [esp Dog]
  - Tumour metastasis
- Atrial thrombosis
- Left-right Shunt
  - Ventricular septal defect (VSD)
  - Atrial septal defect (ASD) (Shunt reversal)
  - Persistent ductus arteriosus (PDA)
- Right-left Shunt
  - Tetralogy of Fallot
  - Transposition of the large vessels
- Endocardial fibroelastosis

## Left Ventricle

- Mitral valve insufficiency
- Cardiomyopathy
  - Dilated Cardiomyopathy
  - Hypertrophic cardiomyopathy [esp Cat]
  - Restrictive cardiomyopathy
- (Sub)Aortic stenosis [Dog]
- Patent ductus arteriosus (PDA)
- Arterial hypertension [esp Cat]
- Myocarditis

## Right Atrium

- Atrial septal defect (Left-right Shunt)
- Tricuspid valve insufficiency
- Atrial tumours
  - Haemangiosarcoma [Dog]
  - Myxoma [Dog]
  - Tumour metastasis
- Atrial thrombosis with right ventricular enlargement
  - Cor pulmonale
  - Pulmonary stenosis
  - Tetralogy of Fallot
  - Left sided heart failure
  - Mitral valve stenosis
  - (Dirofilaria sp. [esp Dog])
- Tricuspid valve stenosis
- Ebstein Anomaly (Tricuspid valve displacement into the right ventricle)

## Right Atrium

- Left-right Shunt
  - Ventricular septal defect (VSD)
  - Atrial septal defect (ASD)
  - Persistent Ductus arteriosus (PDA)
- Tricuspid valve insufficiency
- Pulmonary stenosis
- Cor pulmonale
- Tetralogy of Fallot
  - Pulmonary stenosis
  - Ventricular septal defect
  - Overriding aorta
  - Right ventricular hypertrophy
- Ebstein Anomaly (Tricuspid valve displacement into the right ventricle)

## Pulmonary Segment

- Pulmonary stenosis
- Cor pulmonale
  - Pulmonary/ Respiratory tract disease
  - (Dirofilaria sp. [esp Dog])

- (Angiostrongylus sp [Dog])
- Thromboembolism of the pulmonary artery
- Left-right Shunt
  - Ventricular septal defect (VSD)
  - Atrial septal defect (ASD) (Shunt reversal)
  - Patent ductus arteriosus (PDA)
- With dilation of the pulmonary veins
  - Left sided heart failure
  - Mitral valve stenosis
- Tetralogy of Fallot
  - Pulmonary stenosis
  - Overriding aorta
  - Right ventricular hypertrophy
- Erroneous outlet of pulmonary veins into the Vena cava

## Aorta

- (Sub)Aortic stenosis

- Patent ductus arteriosus (PDA)
- Arterial hypertension [esp Cat]
- Tetralogy of Fallot
  - Pulmonary stenosis
  - Ventricular septal defect
  - Overriding aorta
  - Right ventricular hypertrophy
- Persistent right aortic arch (Right aorta)
- Aortic aneurysm
- Aneurysm of Sinus valsalvae
- Connective tissue disease
  - Ehlers-Danlos syndrome
  - Osteogenesis imperfecta

## Spherical Heart

- Pericardial effusion
  - Atrial rupture
  - Pericarditis
  - Congestive heart failure
  - Pericardial tumours
  - Renal failure

## Diagnostic Approach

### *Cardiomegaly*

- 1. Case History**
- 2. General Examination**
- 3. X-Ray Study**
  - Thorax
  - Abdomen
- 4. ECG**
- 5. Ultrasound**
  - Heart (Doppler
  - Echocardiography)

### **6. Blood Tests**

- Hct, Ery, Leuc, Hb
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- Na, K, Ca, Mg
- Diff BC
- Blood Gas Analysis (BGA)
- $\alpha$  HBDH
- Troponin
- ANP

**MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Dirofilaria Antigen [Dog]

**FUNCTION TESTS**

- T<sub>4</sub>, fT<sub>4</sub> [Cat]
- T<sub>3</sub> Suppression Test [Cat]

**FURTHER SEROLOGY**

- Serum Digitalis level  
(Therapeutic control)

**7. Urinalysis**

- Urine dip stick

- Specific gravity
- Urinary output/volume

**8. Further Tests**

- Faecal Examination
- Examination of the ocular fundus
- Blood pressure measure (indirect/direct)
- Non-selective angiography
- Analysis of body cavity fluid

## Hypertension, Arterial

**Increased Blood Pressure**

Normal values (direct measurement):

Dog: 130–170 mmHg (Systole) 70–90 mmHg (Diastole)

Cat: 150–200 mmHg (Systole) 85–100 mmHg (Diastole)

**Common Causes**

Dog	Cat
+++ Renal Failure	+++ Renal Failure
++ Diabetes mellitus	++ Hyperthyroidism
++ Hypercortisolism (Cushing's Disease)	++ Diabetes mellitus

**Causes**

- Idiopathic
- Chronic renal failure
- Hypercortisolism (Cushing's Disease) [Dog]
- Diabetes mellitus
- Hyperthyroidism [Cat]
- Central nervous Disease
- Hyperaldosteronism [Dog]
- Phaeochromocytoma

## Diagnostic Approach

### *Hypertension, Arterial*

#### 1. Case History

#### 2. General Examination

#### 3. ECG

#### 4. X-Ray Study

- Abdomen
- Thorax
- Excretory urography

#### 5. Ultrasound

- Abdomen (kidneys, adrenal glands)
- Heart (Doppler Echocardiography)

#### 6. Blood Tests

- Hct, Ery, Leuc, Hb
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- Na, K, Ca, P
- FIP Profile [Cat]
  - TP
  - Alb/Glob Ratio
  - Bili
  - GOT
  - Serum electrophoresis
- Diff BC
- $\alpha$  HBDH
- Troponin
- ANP

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]

#### **FUNCTION TESTS**

- $T_4$ , f $T_4$
- $T_3$  Suppression Test [Cat]
- Adrenal gland function tests [Dog]
  - Dexamethasone Suppression test
  - ACTH Stimulation test
  - Cortisol/Creatinine Ratio
- Serum Aldosterone [Dog]

#### 7. Urinalysis

- Urinary output/volume
- Urine dip stick
- Specific gravity
- Urine sediment
  - Bacteria
  - Erys, Leuc
  - Epithelial cells
  - Urinary casts
  - Urinary crystals
  - Tumour cytology
- Bacterial culture (Cystocentesis)

#### 8. Further Tests

- Examination of the ocular background
- Blood Pressure measure (indirect/direct)
- Renal biopsy

## Pulse Alterations

Changes in the pulse quality

### Absent Femoral Pulse

- Feline aortic thromboembolism [Cat]
- Thromboembolism of the femoral artery
- Cardiac Arrest
  - Asystole
  - Atrial Fibrillation
  - Electromechanical dissociation

### Weak Pulse

- Arterial hypotension
- High diastolic blood pressure with low systolic blood pressure
- Hypovolaemia
- Mitral valve insufficiency
- (Sub)Aortic stenosis
- Cardiomyopathies
- Pericardial effusion
- Aortic thromboembolism [Cat]

### Strong Pulse

- Exercise/Excitement
- Fever
- Anaemia
- Hyperthyroidism [Cat]
- Patent ductus arteriosus
- Aortic valve insufficiency

### Pulse Deficit

- Cardiac Arrhythmias
  - Supraventricular extrasystoles
  - Ventricular extrasystoles

### Jugular Venous Pressure

- Pulmonary stenosis
- Cor pulmonale
- (Dirofilaria sp. [esp Dog])
- Tricuspid valve insufficiency
- Cardiomyopathies
- Pericardial effusion
- Heart tumours
- Atrial thrombosis
- III. Degree AV Block

## Diagnostic Approach

### *Pulse Alterations*

- 1. Case History**
- 2. General Examination**
- 3. X-Ray Study**

- Thorax
- Abdomen
- 4. ECG**

**5. Ultrasound**

- Heart (Doppler-Echocardiography)
- Abdomen

**6. Blood Tests**

- Hct, Ery, Leuc, Hb
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- Na, K, Ca, Mg
- Diff BC
- Blood Gas Analysis (BGA)
- $\alpha$  HBDH
- Troponin
- ANP

**MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]

- Dirofilaria Antigen [Dog]

**FUNCTION TESTS**

- $T_4$ , f $T_4$  [Cat]
- $T_3$  Suppression Test [Cat]

**FURTHER SEROLOGY**

- Serum Digitalis Level

**7. Urinalysis**

- Urinary output/volume
- Urine dip stick
- Specific gravity

**8. Further Tests**

- Angiography
- Examination of the ocular fundus
- Blood Pressure Measure  
(indirect/direct)

## Syncope

Spontaneous, reversible and brief unconsciousness

**Common Causes**

Dog	Cat
+++ Valvular Heart Disease	+++ Hypertrophic Cardiomyopathy
++ Dilated Cardiomyopathy	++ Valvular Heart Disease
++ Congenital Heart Disease	++ Pericardial Disease
+ Pericardial Disease	++ Hyperthyroidism
+ Neurological Causes	+ Neurological Causes

**Cardiovascular Causes****Congenital Heart Disease**

- Patent ductus arteriosus (PDA)
- (Sub)Aortic stenosis
- Stenosis of the pulmonary artery

- Atrial septal defect (ASD)
- Ventricular septal defect (VSD)
- Valve dysplasia
- Tetralogy of Fallot
- Endocardial fibroelastosis
- Ebstein Anomaly

- Erroneous outlet of pulmonary veins into the Vena cava

## **Myocardial Disease**

### **Primary Cardiomyopathy**

- Dilated cardiomyopathy
- Hypertrophic cardiomyopathy [esp Cat]
- Restrictive cardiomyopathy

### **Secondary Cardiomyopathy**

- Metabolic Causes
  - Hyperthyroidism [Cat]
  - Hypothyroidism [Dog]
  - Hypo-/Hyperkalaemia
  - Hypo-/Hypercalcemia
  - Diabetes mellitus
  - Hypercortisolism (Cushing's Disease) [Dog]
  - Uraemia
  - Renal hypertension
  - Glycogen storage disease
- Alimentary Causes
  - Taurine deficiency [esp Cat]
  - Carnitine deficiency [esp Dog]
- Viral Myocarditis
  - Parvovirus
  - Canine distemper virus [Dog]
  - Herpes virus
- Bacterial Endo-/Myocarditis
  - Aerobics/Anaerobics
  - Lyme Borreliosis sp. [Dog]
  - Endotoxaemia
- Mycotic Myocarditis
  - Cryptococcus sp. [esp Cat]
- Parasitic Myocarditis
  - Toxoplasma sp.
  - (Hepatozoon sp. [Dog])

- (Trypanosoma sp. [Dog])
- Immunoreactive Myocarditis
  - Polyarteritis nodosa
  - Lupus erythematosus
- Toxic Myocarditis/
   
Myocarditis
  - Doxorubicin
  - Heavy metals
- Traumatic Myocarditis
  - Contusion
  - Atrial Rupture

## **Valvular Heart Disease**

- Mitral valve insufficiency
  - Dysplasia
  - Endocarditis
  - Fibrosis
  - Functional dilation of the valvular anulus
- Valvular pulmonary stenosis
  - Dysplasia
- Tricuspid valve insufficiency
  - Dysplasia
  - Endocarditis
  - Fibrosis
  - Functional dilation of the valvular anulus
- Valvular Aortic stenosis
  - Dysplasia
- Papillary muscle rupture

## **Heart/Pericardial Tumours**

- Haemangiosarcoma [esp Dog]
- Heart base tumour  
(Chemodectoma) [Dog]
- Myxoma [Dog]
- Thyroid carcinoma
- Mesothelioma
- Lymphosarcoma
- Cysts

## **Pericardial Disease (Pericardial Effusion)**

### **Modified Transudate**

- Congestive Heart Failure
- Uraemia
- Hypoalbuminaemia
- Cardiac arrhythmias
- Pericardio-diaphragmatic hernia

### **Exudate**

- Tumours
- Pericarditis
  - Canine Distemper virus [Dog]
  - FIP Coronavirus [Cat]
  - Leptospira sp. [Dog]
  - Actinomyces sp.
  - Nocardia sp.
  - Mycobacterium sp.
  - Toxoplasma sp.
  - Pasteurella sp.
  - Streptococcus spp.
  - Staphylococcus spp.
  - E. coli
  - Cryptococcus sp. [esp Cat]

### **Blood**

- Atrial rupture
- Haemangiosarcoma [esp Dog]
- Foreign body
- Coagulopathy

## **Arterial Thromboembolism**

- Feline Aortic thromboembolism
  - Hypertrophic cardiomyopathy
  - Restrictive cardiomyopathy
  - (Dilated cardiomyopathy)
  - Pulmonary thromboembolism

- (Dirofilaria sp. [esp Dog])
- (Angiostrongylus sp. [Dog])
- Hypercortisolism (Cushing's Disease) [Dog]
- DIC
- Cardiomyopathy
- Protein-losing nephropathy
- Acute pancreatitis
- Septicaemia/Endotoxaemia
- Immune haemolytic anaemia
- Bone trauma/surgery
- Hyperviscosity syndrome

## **Neurological Causes**

### **Vasovagal Hypertension**

- Excitement
- Cough
- Sneezing
- Labour contractions
- Seizures
- Faecal/Urinary Evacuation
- Carotid sinus reflex stimulation (collar)

### **Further Causes**

- Traumatic brain injury
- CNS haemorrhage
- Brain tumours
- Cerebral circulatory disturbances
- Narcolepsy

### **Further Causes**

### **Metabolic Causes**

- Hypoglycaemia
- Metabolic Acidosis

- Hypo-/Hypercalcaemia
- Hypo-/Hypernatraemia
- Hypo/Hyperkalaemia
- Hypocortisolism (Addison's Disease) [Dog]

### Hyperviscosity Syndrome

- Plasmacytoma (multiple myeloma) [esp Dog]
- Lymphatic leukaemia [Cat]
- FIP Coronavirus [Cat]
- Lupus erythematosus
- Dehydration
- Rheumatoid Arthritis

- (*Leishmania* sp. [esp Dog])
- (*Ehrlichia* sp. [esp Dog])
- Polycythaemia vera

### Drugs

- ACE Inhibitors
- Hydralazine
- Calcium channel blocker
- Nitroglycerin
- Acepromazine
- Anticonvulsants
- Antiarrhythmics
- Diuretics

## Diagnostic Approach

### *Syncope*

#### 1. Case History

#### 2. General Examination

#### 3. Neurological Examination

#### 4. ECG

- Carotid sinus pressure

#### 5. X-Ray Study

- Thorax
- Abdomen

#### 6. Ultrasound

- Heart (Doppler Echocardiography)

#### 7. Blood Tests

- Hct, Ery, Leuc, Hb
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- Na, K, Ca, Mg
- Diff BC
- Blood Gas Analysis (BGA)

- $\alpha$  HBDH
- Troponin
- ANP

### MICROBIAL SEROLOGY

- FeLV-/FIV Antigen [Cat]
- Dirofilaria Antigen [Dog]

### FUNCTION TESTS

- $T_4$ , f $T_4$  [Cat]
- $T_3$  Suppression test [Cat]

### FURTHER SEROLOGY

- Serum Digitalis level  
(Therapeutic control)

#### 8. Urinalysis

- Urinary output/volume
- Urine dip stick
- Specific gravity

#### 9. Further Tests

- Examination of the ocular fundus

- Blood Pressure measure  
(indirect/direct)
- Non-selective angiography
- Analysis of body cavity fluid

## Cyanosis

Blue discolouration of the skin and mucous membranes as a result of insufficient oxygen saturation

Common Causes	
Dog	Cat
Central Cyanosis	
+++ Mitral valve insufficiency	+++ Hypertrophic cardiomyopathy
++ Dilated cardiomyopathy	++ Restrictive cardiomyopathy
++ Congenital heart disease	++ Feline asthma
++ Tracheal collapse	++ Pulmonary disease
++ Pulmonary disease	++ Congenital heart disease
Peripheral Cyanosis	
+ Exposure to the cold	++ Exposure to the cold

### Central Cyanosis

### Laryngeal Disease

- Foreign body
- Glottal oedema
- Abscess
- Tonsillitis/Tonsillar carcinoma
- Overlong soft palate [esp Dog]
- Laryngeal tumours
- Laryngeal paralysis/collapse
- Granulomatous laryngitis

### Tracheobronchial Disease

- Tracheal collapse [Dog]
- Tracheobronchitis

- Allergic bronchitis
- Foreign body
- Tracheal hypoplasia [Dog]

### Pulmonary Disease

- Pneumonia
  - Viral
  - Bacterial
  - Mycotic
  - Rickettsial
  - Parasitic
  - Allergic
  - Aspiration pneumonia
  - Foreign body
- Lung tumours

- Pulmonary oedema
- Pulmonary contusion/  
haemorrhage
- Thromboembolism of the  
pulmonary artery
- Pulmonary fibrosis
- Atelectasis/Emphysema
- Lung lobe torsion [Dog]

## **Thoracic Disease**

- Pleural effusion
- Pneumothorax
- Mediastinal tumours
- Pleuritis/Mediastinitis
- Diaphragmatic hernia
- Rib fracture
- Diaphragmatic paralysis

## **Congenital Heart Disease**

- Patent ductus arteriosus (PDA)
- (Sub)Aortic stenosis
- Stenosis of the pulmonary  
artery
- Atrial septal defect (ASD)
- Ventricular septal defect (VSD)
- Valvular dysplasia
- Endocardial fibroelastosis
- Tetralogy of Fallot
- Persistent right aortic arch

## **Heart Valve Disease**

- Mitral valve insufficiency
- Valvular pulmonary stenosis
- Tricuspid valve insufficiency
- Valvular aortic stenosis

## **Acquired Heart Disease**

- Primary Cardiomyopathy

- Dilated cardiomyopathy
- Hypertrophic  
cardiomyopathy [esp Cat]
- Restrictive cardiomyopathy
- Secondary cardiomyopathy
  - Carnitine/Taurine  
deficiency
  - Metabolic disease
- Heart tumours
- Myocarditis/Endocarditis
- Atrial rupture/Papillary muscle  
rupture
- Myocardial infarction

## **Pericardial Disease**

- Pericarditis
- Pericardial tumours
- Pericardial rupture

## **Further Causes**

- Shock
- Anaesthetic incident  
(Hypoxia)
- Drowning
- Anaemia/  
Methaemoglobinæmia

## **Peripheral Cyanosis**

- Exposure to the cold
- Thrombophlebitis
- Venous compression  
(Tumours)
- Venous thrombosis

## **Caudal Body Part**

- Patent ductus arteriosus with  
R-L Shunt

## Diagnostic Approach

### Cyanosis

#### 1. Case History

- ANP

#### 2. General Examination

#### MICROBIAL SEROLOGY

- FeLV-/FIV Antigen [Cat]
- Dirofilaria Antigen [Dog]

#### 3. ECG

#### FURTHER SEROLOGY

- Serum Methaemoglobin

#### 4. X-Ray Study

#### 7. Urinalysis

- Thorax
- Abdomen

- Urinary output/volume

#### 5. Ultrasound

- Urine dip stick

- Heart (Doppler
- Echocardiography)

- Specific gravity

#### 6. Blood Tests

- Urine sediment

- Hct, Ery, Leuc, Hb

#### 8. Further Tests

- Non-selective angiography

- Na, K, Ca

- Bronchoscopy ±

- TP, Alb, Glob

Tracheobronchial lavage

- GPT, AP, Urea, Crea, BG

- cytology

- Blood Gas Analysis (BGA)

- bacterial culture

- Diff BB

- fungal culture

- α HBDH

- Analysis of body cavity fluid

- Troponin

# 3 Respiratory Principal Symptoms

Respiratory Sounds.....	71
Dyspnoea.....	75
Pulmonary Oedema.....	78
Pulmonary Thromboembolism .....	79
Pleural Effusion.....	79
Pneumothorax .....	80
Cough.....	82
Lung Sounds.....	86
Nasal Discharge .....	88
Epistaxis .....	92
Reverse Sneezing .....	95

## Further Relevant Principal Symptoms

Cardiac/Respiratory Arrest (Ch. 2: Cardiovascular Principal Symptoms) .....	
---	--

## Respiratory Sounds

Inspiratory breathing sounds that are audible without the use of a stethoscope

**Stridor:** Whistling type, often inspiratory stenotic sound of the upper airways

**Stertor:** Snoring

### Common Causes

Dog	Cat
+++ Brachycephalic Syndrome	+++ Rhinitis/Sinusitis
++ Rhinitis/Sinusitis	++ Nasopharyngeal foreign bodies

<b>Common Causes</b>	
Dog	Cat
++ Tracheal collapse	
++ Infectious Tracheobronchitis	++ Brachycephalic Syndrome
+ Tonsillitis/Tonsillar carcinoma	++ Feline asthma
+ Laryngeal paralysis	+ Nasopharyngeal Polyps

## Endonasal Causes

### Rhinitis/Sinusitis

- Viral Rhinitis
  - Feline Herpes virus [Cat]
  - Feline Calici virus [Cat]
  - Canine Herpes virus [Dog]
  - Canine Adenovirus I, II [Dog]
  - Parainfluenza virus [Dog]
  - Canine Distemper virus [Dog]
- Bacterial Rhinitis
  - Pasteurella sp.
  - Bordetella sp.
  - Staphylococcus sp.
  - Pseudomonas sp.
  - Chlamydia sp. [Cat]
  - E. coli
  - Mycoplasma sp.
- Mycotic Rhinitis
  - Cryptococcus sp. [esp Cat]
  - Aspergillus sp.
  - Rhinosporidium sp. [Dog]
- Endonasal foreign body
  - Blade of grass [Cat]
  - Grain seeds/ears
- Parasitic Rhinitis
  - Capillaria sp.
  - (Linguatula sp.)
  - (Pneumonyssus sp.)
  - (Cuterebra sp.)
- Immunoreactive Rhinitis
  - Atopy/Inhalation allergy

- IgA deficiency
- FeLV/FIV [Cat]
- Oronasal fistula
  - Dental abscess
  - Cleft palate (congenital, traumatic)

### Endonasal Tumours

- Adenocarcinoma
- Lymphosarcoma
- Squamous cell carcinoma
- Osteosarcoma
- Chondrosarcoma
- Fibrosarcoma
- Melanoma
- Myxosarcoma
- Nasopharyngeal Polyps [Cat]

### Brachycephalic Syndrome

- Narrowing of the nares
- Anomalies of the nasal concha
- Short pharyngeal cavity
- Mucosal hyperplasia
- Overlong soft palate
- Laryngeal collapse
- Tracheal hypoplasia

### Laryngeal Causes

### Laryngitis

- Granulomatous Laryngitis

- Foreign body

## Laryngeal Tumours

- Squamous Cell Carcinoma
- Lymphosarcoma
- Adenocarcinoma
- Rhabdomyosarcoma
- Leiomyosarcoma
- Mast cell tumour
- Haemangiosarcoma
- Osteosarcoma

## Laryngeal Paralysis

- Iatrogenic: Thyroidectomy
- Paralysis of the recurrent laryngeal nerve [Dog]
- Thyroid carcinoma
- Polyneuropathy
  - Hypothyroidism
  - Hypocortisolism (Addison's Disease)
  - Myasthenia gravis
- Congenital Deformity

## Laryngospasm/Glottal Oedema

- Insect sting allergy
- Drug allergy
- Endotracheal Intubation
- Smoke inhalation/Irritants
- Foreign bodies
- Mast cell tumour
- Aspiration of gastric acid

## Further Causes

- Tonsillitis/Tonsillar carcinoma
- Peritonsillar abscess
- Overlong soft palate

## Tracheal Causes

### Intraluminal Stenosis

- Foreign body
- Tracheal collapse
- Accumulation of secretion (obstructive bronchitis)
  - Mucus
  - Pus
  - Blood
- Tracheal hypoplasia
- Stricture
- Bronchiectasia
- Tracheal tumours
  - Squamous cell carcinoma
  - Lymphosarcoma

### Extraluminal Stenosis

- Left atrial cardiac enlargement
- Mediastinitis
- Lymphadenopathy
- Megaoesophagus
- Oesophageal foreign body
- Tracheal tumours
  - Thyroid carcinoma
  - Thymoma

## Tracheobronchitis

- Viral Tracheobronchitis
  - Canine distemper virus [Dog]
  - Cat flu [Cat]
  - Feline Herpes virus [Cat]
  - Feline Calici virus [Cat]
  - Kennel Cough [Dog]
  - Canine Herpes virus [Dog]
  - Canine Adenovirus I, II [Dog]
  - Parainfluenza virus [Dog]

- Canine Reovirus I, II, III [Dog]
- Bacterial Tracheobronchitis
  - Bordetella sp.
  - Pasteurella sp.
  - Pseudomonas sp.
  - Streptococcus sp.
  - Staphylococcus sp.
  - Chlamydia sp. [Cat]
  - E. coli
  - Mycoplasma sp. [esp Cat]
  - Klebsiella sp.
- Parasitic Tracheobronchitis
  - Filaroides sp. [esp Dog]
  - Capillaria sp.
  - Pneumocystis sp.
- Cryptosporidium sp. [Cat]
- (Pneumonyssus sp.)
- Aelurostrongylus sp. [Cat]
- Angiostrongylus sp. [Dog]
- (Crenosoma sp. [Dog])
- Immunoreactive Tracheobronchitis
  - Feline asthma [Cat]
  - Eosinophilic bronchitis
- Further Causes
  - Smoke Inhalation
  - Foreign bodies
  - Endotracheal intubation
  - Dyskinesia of the ciliated epithelium
  - Aspiration of gastric acid

## Diagnostic Approach

### *Respiratory Sounds*

#### 1. Case History

± Tracheobronchial lavage

– Bacterial-/Fungal Culture

– Cytology

#### 2. General Examination

#### 6. Blood Tests

- Hct, Ery, Leuc, Hb
- Diff BC

#### 3. Oropharyngeal Examination

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Aspergillus Antibodies [Dog]
- Cryptococcus Antibodies [Cat]

#### 4. X-Ray Study

- Thorax
- Throat
- Skull

#### 5. Endoscopy

- Rhinoscopy (ortho-/retrograde)
  - ± endonasal swab sample
  - ± retrograde flush sample
  - Bacterial culture
  - Fungal culture
  - Cytology
- Laryngo-/Bronchoscopy

#### 7. Further Tests

- Ultrasound of the throat
- Parasitological faecal examination
  - Flotation
  - Baermann-Wetzel method

## Dyspnoea

Respiratory distress

### Common Causes

Dog	Cat
+++ Pneumothorax	+++ Pneumothorax
++ Pulmonary oedema	++ Pulmonary oedema
++ Pulmonary haemorrhage	++ Pulmonary haemorrhage
++ Pneumonia	++ Pleural effusion
++ Pleural effusion	++ Feline Asthma
++ Pulmonary tumours	+ Pulmonary tumours
+ Diaphragmatic elevation	

### Endonasal Causes

#### Rhinitis/Sinusitis

- Viral Rhinitis
  - Feline Herpes virus [Cat]
  - Feline Calici virus [Cat]
  - Canine Herpes virus [Dog]
  - Canine Adenovirus I, II [Dog]
  - Parainfluenza virus [Dog]
  - Canine Distemper virus [Dog]
- Bacterial Rhinitis
  - Pasteurella sp.
  - Bordetella sp.
  - Staphylococcus sp.
  - Pseudomonas sp.
  - Chlamydia sp. [Cat]
  - E. coli
  - Mycoplasma sp.
- Mycotic Rhinitis
  - Cryptococcus sp. [esp]
  - Aspergillus sp.

- Rhinosporidium sp. [Dog]
- Endonasal foreign body
  - Blade of grass [Cat]
  - Grain seeds/ears
- Parasitic Rhinitis
  - Capillaria sp.
  - (Linguatula sp.)
  - (Pneumonyssus sp.)
  - (Cuterebra sp. [Dog])
- Immunoreactive Rhinitis
  - Atopy/Inhalation allergy
  - IgA Deficiency
  - FeLV/FIV [Cat]
- Oronasal fistula
  - Dental abscess
  - Cleft palate (congenital, traumatic)

### Endonasal Tumours

- Adenocarcinoma
- Lymphosarcoma
- Squamous cell carcinoma
- Osteosarcoma
- Chondrosarcoma

- Fibrosarcoma
- Melanoma
- Myxosarcoma
- Nasopharyngeal Polyps [Cat]

### **Brachycephalic Syndrome**

- Narrowing of the nares
- Anomalies of the nasal concha
- Short pharyngeal cavity
- Mucosal hyperplasia
- Overlong soft palate
- Laryngeal collapse
- Tracheal hypoplasia

### **Laryngeal Causes**

#### **Laryngitis**

- Granulomatous Laryngitis
- Foreign body

#### **Laryngeal Tumours**

- Squamous Cell Carcinoma
- Lymphosarcoma
- Adenocarcinoma
- Rhabdomyosarcoma
- Leiomyosarcoma
- Mast cell tumour
- Haemangiosarcoma
- Osteosarcoma

#### **Laryngeal Paralysis**

- Iatrogenic: Thyroidectomy
- Paralysis of the recurrent laryngeal nerve [Dog]
- Thyroid carcinoma
- Polyneuropathy
  - Hypothyroidism
  - Hypocortisolism (Addison's Disease)

- Myasthenia gravis
- Congenital Deformity

### **Laryngospasm/Glottal Oedema**

- Insect sting allergy
- Drug allergy
- Endotracheal Intubation
- Smoke inhalation/Irritants
- Foreign bodies
- Mast cell tumour
- Aspiration of gastric acid

### **Further Causes**

- Tonsillitis/Tonsillar carcinoma
- Peritonsillar abscess
- Overlong soft palate

### **Tracheal Causes**

#### **Intraluminal Stenosis**

- Foreign body
- Tracheal collapse
- Accumulation of secretion (obstructive bronchopneumonia)
  - Mucus/pus/blood
- Tracheal hypoplasia
- Stricture
- Bronchiectasia
- Tracheal tumours
  - Squamous cell carcinoma
  - Lymphosarcoma

#### **Extraluminal Stenosis**

- Left atrial cardiac enlargement
- Mediastinitis
- Lymphadenopathy
- Megaoesophagus
- Oesophageal foreign body

- Tracheal tumours
  - Thyroid carcinoma
  - Thymoma

## Tracheobronchitis

- Viral Tracheobronchitis
  - Canine distemper virus [Dog]
  - Cat flu [Cat]
  - Feline Herpes virus [Cat]
  - Feline Calici virus [Cat]
  - Kennel Cough [Dog]
  - Canine Herpes virus [Dog]
  - Canine Adenovirus I, II [Dog]
  - Parainfluenza virus [Dog]
  - Canine Reovirus I, II, III [Dog]
- Bacterial Tracheobronchitis
  - Bordetella sp.
  - Pasteurella sp.
  - Pseudomonas sp.
  - Streptococcus sp.
  - Staphylococcus sp.
  - Chlamydia sp. [Cat]
  - E. coli
  - Mycoplasma sp. [esp Cat]
  - Klebsiella sp.
- Parasitic Tracheobronchitis
  - Filaroides sp. [esp Dog]
  - Capillaria sp.
  - Pneumocystis sp.
  - Cryptosporidium sp. [Cat]
  - (Pneumonyssus sp.)
  - Aelurostrongylus sp. [Cat]
  - Angiostrongylus sp. [Dog]
  - (Crenosoma sp. [Dog])
- Immunoreactive Tracheobronchitis
  - Feline asthma [Cat]

- Eosinophilic bronchitis
- Further Causes
  - Smoke Inhalation
  - Foreign bodies
  - Endotracheal intubation
  - Dyskinesia of the ciliated epithelium
  - Aspiration of gastric acid

## Pulmonary Causes

### Pneumonia

- Viral Pneumonia
  - Canine Distemper virus [Dog]
  - CAV-1 (Hepatitis c. c.) [Dog]
  - Cat flu [Cat]
  - Kennel Cough [Dog]
  - FIP Coronavirus [Cat]
  - FeLV/FIV [Cat]
- Bacterial Pneumonia
  - Bordetella sp.
  - E. coli
  - Klebsiella sp.
  - Pseudomonas sp.
  - Pasteurella sp.
  - Staphylococcus sp.
  - Streptococcus sp.
  - Mycoplasma sp.
  - Mycobacterium spp.
- Rickettsial Pneumonia
  - (Ehrlichia sp. [Dog])
  - (Rickettsia sp. [Dog])
- Parasitic Pneumonia
  - Toxoplasma sp.
  - Pneumocystis sp.
  - Capillaria sp.
  - Filaroides sp. [esp Dog]
  - (Crenosoma sp. [Dog])
  - Aelurostrongylus sp. [Cat]

- Angiostrongylus sp. [Dog]
- (Dirofilaria sp. [esp Dog])
- (Paragonimus sp. [esp Dog])
- Larva migrans
- Mycotic Pneumonia
  - Cryptococcus sp. [esp Cat]
  - (Histoplasma sp.)
  - (Blastomyces sp.)
  - (Coccidioides sp.)
  - Facultative pathogenic fungi
- Immunoreactive Pneumonia
  - Atopy/Inhalation allergy
  - Bacterial/Fungal/Parasite allergy
  - Drug allergy
  - Lupus erythematosus
- Toxic Pneumonia
  - Smoke inhalation/Irritants
  - Uraemia
  - Aspiration pneumonia
- Other Causes
  - IgA Deficiency
  - Dyskinesia of the ciliated epithelium
  - Foreign body

## Pulmonary Oedema

### ↑ Hydrostatic Pressure

- Left Sided Heart Failure
  - Dilated Cardiomyopathy
  - Hypertrophic Cardiomyopathy
  - Restrictive Cardiomyopathy
  - Mitral Valve insufficiency
  - (Sub)Aortic stenosis
  - Ventricular septal defect
  - Patent ductus arteriosus
- Anaphylaxis

- Hyperthyroidism [Cat]
- Hypertension [esp Cat]
- Cardiac arrhythmias
- Papillary muscle rupture
- Overinfusion

### ↓ Hydrostatic Pressure

- Hypoalbuminaemia + overinfusion

### ↑ Permeability

- Pneumonia
- Aspiration pneumonia
- Smoke inhalation/Irritant gases
- Uraemia
- Endotoxins
- DIC
- Pulmonary contusion
- Seizures
- Acute Pancreatitis
- Head trauma
- Anaphylaxis
- Snake venom
- O<sub>2</sub> Intoxication
- Drowning
- Electrical shock

## Pulmonary Tumours

- Tumour metastasis
  - Thyroid carcinoma
  - Mammary carcinoma
  - Haemangiosarcoma
  - Squamous cell carcinoma
  - Transitional cell carcinoma
  - Melanoma
  - Lymphosarcoma
  - Malignant Histiocytosis [Bernese Mountain Dog]
  - Adenocarcinoma
- Primary tumours
  - Adenocarcinoma
  - Squamous cell carcinoma

## Pulmonary Thromboembolism

- Parasites in the pulmonary artery
  - Aelurostrongylus sp. [Cat]
  - Dirofilaria sp. [esp Dog]
  - Angiostrongylus sp. [Dog]
- Larva migrans
- Cardiomyopathy
- Septicaemia/Endocarditis
- Anaesthesia/Lateral recumbency
- Surgery
- DIC
- Hyperviscosity syndrome
- Glomerulonephritis
- Renal amyloidosis
- Hypercortisolism (Cushing's Disease)
- Hypothyroidism
- Pancreatitis
- Immune haemolytic Anaemia

## Other Causes

- Pulmonary haemorrhage
  - Pulmonary contusion
  - Lung lobe torsion
  - Foreign body
  - Coagulopathy
  - Pneumonia
  - Pulmonary abscess
  - Pulmonary tumours
- Atelectasis
- Emphysema
- Pulmonary fibrosis

## Pleural/Mediastinal Causes

### Pleural Effusion

#### Transudate

- Congestive Heart Failure  
(Right sided heart failure)

- Hypoalbuminaemia

#### Modified Transudate

- Congestive Heart Failure
- Tumours
- Diaphragmatic hernia
- Pancreatitis
- Autoimmune Diseases
- Hepatic cirrhosis

#### Exudate

- FIP Coronavirus [Cat]
- Tumours
- Pyothorax
  - Chlamydia sp.
  - Actinomyces sp.
  - Nocardia sp.
  - Pasteurella sp.
  - Bacteroides sp.
  - Fusobacterium sp.
  - Pneumonia
  - Foreign body perforation
  - Oesophageal perforation
  - Tumour necrosis
  - Thoracocentesis
- Diaphragmatic hernia
- Lung lobe torsion

#### Blood

- Lung lobe torsion
- Trauma
- Coagulopathy
- Tumours

#### Chyle

- Congestive Heart Failure  
[esp Cat]
- Tumours
- Trauma (rupture of the thoracic duct)
- Lymphangiectasia [Dog]
- Diaphragmatic hernia
- Lung lobe torsion
- Dirofilaria sp. [esp Dog]

## Pneumothorax

- Traumatic Causes
  - Thoracic penetration
  - Thoracocentesis
  - Pressure ventilation
  - Oesophageal penetration
  - Tracheal penetration
  - Perforating rib fracture
  - Pulmonary contusion/ Pleural tear
- Spontaneous Causes
  - Pneumonia
  - Bullous emphysema
  - Larva migrans
  - Mycotic Granuloma
  - Pulmonary tumour
  - Pulmonary abscess
  - Pulmonary cysts
  - Foreign body

## Mediastinal Tumours

- Lymphadenopathy
- Lymphosarcoma [esp Cat]
- Heart base tumour (Chemodectoma) [Dog]
- Thyroid carcinoma
- Thymoma
- Mediastinal cysts
- Mesothelioma

## Diaphragmatic elevation

- Diaphragmatic rupture
- Diaphragmatic hernia
- Gastric dilation/ volvulus [Dog]
- Hepatomegaly
- Paralysis of the phrenic nerve
- Intraabdominal tumour
- Profound abdominal effusion

## Other Causes

- Anaemia/ Methaemoglobinæmia
- Central nervous dysfunction of the respiratory centre
  - Heat stroke
  - Head injury
  - Brain tumours
  - Ischaemia
  - Encephalitis
- Drug related/toxic respiratory depression
  - Morphine/Morphine derivatives
  - Barbiturates
  - Curare
  - Acetylsalicylic acid
  - Beta blockers
  - Metaldehyde poisoning
  - Nicotine poisoning
  - Alpha Naphtylthiourea (ANTU) poisoning
  - Organophosphate poisoning
  - Phosphorus poisoning
- Metabolic Acidosis (with compensatory hyperventilation)

## Normochloraemic Acidosis

- Diabetic ketoacidosis
- Uraemic acidosis
- Lactacidosis
- Acetylsalicylic acid
- Ethylene glycol poisoning

## Hyperchloraemic Acidosis

- Diarrhoea
- Renal tubular acidosis
- Potassium sparing Diuretics (Spironolactone, Triamterene, Amiloride)

- Carboanhydrase inhibitor (Acetazolamide)
- Hypocortisolism (Addison's Disease) [Dog]
- Ammonium chloride
- Calcium chloride
- Parenteral nutrition (Arginine, Lysine, Histidine)
- Anaphylaxis
- Pain
- Hysteria
- Obesity (Pickwickian Syndrome)

## Diagnostic Approach

### *Dyspnoea*

#### 1. Case History

#### 2. General Examination

#### 3. Pharyngeal Examination

#### 4. X-Ray Study

- Thorax
- Throat
- Abdomen

#### 5. Ultrasound

- Heart (Doppler Echocardiography)
- Thorax
- Abdomen

#### 6. Thoracocentesis (in case of effusion)

- Fluid Analysis
  - Colour
  - Specific gravity
  - TP
  - Rivalta Test [Cat]
  - Alb/Glob Ratio
  - LDH
  - Bilirubin
  - Crea
  - Amylase, Lipase
  - Ether clearance test
  - Cholesterol, Triglyceride

- Leucocyte number
- Differential cell profile
- Tumour cytology
- Bacterial culture
- Fungal culture

#### 7. Blood Tests

- Hct, Ery, Leuc, Hb
- TP, Albumin, Globulin
- Na, K, Ca
- GPT, AP, Urea, Crea, BG
- MCH, MCV, MCHC
- Diff BC
- Amylase, Lipase [Dog]
- Blood Gas Analysis (BGA)

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Dirofilaria Antigen [Dog]

#### **FUNCTION TESTS**

- $T_4$ ,  $fT_4$

#### **COAGULATION**

- Prothrombin time (PT/Quick)
- (Activated) partial Thromboplastin time (PTT/aPTT)
- Thrombocyte number

#### 8. Urinalysis

- Urine dip stick

- Specific gravity
- Urine sediment

## **9. Faecal Examination**

- Flotation
- Baermann-Wetzel Method

## **10. Endoscopy**

- Bronchoscopy

- ± Tracheobronchial lavage
- Bacterial culture
- Fungal culture
- Cytology

## **11. Further Tests**

- Canine Distemper virus Antigen (conjunctival smear) [Dog]

# Cough

## Tussis

### Common Causes

#### Dog

- +++ Infectious Causes
- ++ Allergic Causes
- ++ Cardiac Causes
- ++ Tumours
- ++ Tracheal collapse
- ++ Foreign body

#### Cat

- +++ Allergic Causes
- ++ Tumours
- ++ Infectious Causes

## Productive Cough

### Mucous/Pus

- Bacterial Bronchopneumonia
  - Bordetella sp.
  - E. coli
  - Klebsiella sp.
  - Pseudomonas sp.
  - Pasteurella sp.
  - Staphylococcus sp.
  - Streptococcus sp.
  - Mycoplasma sp. [esp Cat]
  - Mycobacterium sp.
- Foreign body
  - Nasopharynx [esp Cat]
  - Larynx

- Trachea
- Bronchus
- Aspiration pneumonia
  - Vomitus
  - Regurgitation/ Megaoesophagus
  - Reflux oesophagitis
  - Laryngeal paralysis
  - Anaesthesia
  - Drug/Contrast medium application
  - Force feeding
- Tonsillitis/Tonsillar carcinoma
- Allergic Bronchopneumonia
  - Eosinophilic Pneumonia
  - Feline Asthma [Cat]

- Atopy/Inhalation allergy
  - Bacterial/Fungal/ Parasitic allergy
  - Drug allergy
  - Lupus erythematosus
  - Nasopharyngeal polyps [Cat]
  - Rickettsial bronchopneumonia
    - (Ehrlichia sp. [Dog])
    - (Rickettsia sp. [Dog])
  - Parasitic Bronchopneumonia
    - Toxoplasma sp.
    - Pneumocystis sp.
    - Capillaria sp.
    - Filaroides sp. [esp Dog]
    - (Crenosoma sp. [Dog])
    - Aelurostrongylus sp. [Cat]
    - Angiostrongylus sp. [Dog]
    - Dirofilaria sp. [esp Dog]
    - (Paragonimus sp. [esp Dog])
    - Larva migrans
  - Mycotic Bronchopneumonia
    - Cryptococcus sp. [esp Cat]
    - Facultative pathogenic fungi
      - (Histoplasma sp.)
      - (Blastomyces sp.)
      - (Coccidioides sp.)
  - Toxic bronchopneumonia
    - Smoke inhalation/Irritant gases
    - Uraemia
  - Pulmonary tumours
    - **Primary Tumours**
    - Adenocarcinoma
    - Squamous cell carcinoma
    - **Tumour Metastasis**
    - Thyroid carcinoma
    - Mammary carcinoma
    - Haemangiosarcoma
    - Osteosarcoma
    - Squamous cell carcinoma
    - Transitional cell carcinoma
    - Melanoma
    - Lymphosarcoma [esp Cat]
    - Malignant Histiocytosis [Bernese Mountain Dog]
    - Adenocarcinoma
  - Dyskinesia of the ciliated epithelium
  - Bronchiectasia
  - Pulmonary oedema
    - Left sided heart failure
    - Hyperthyroidism [Cat]
    - Arterial hypertension [esp Cat]
    - Cardiac arrhythmias
    - Pneumonia
- Blood**
- Foreign body
    - Nasopharynx [esp Cat]
    - Larynx
    - Trachea
    - Bronchus
  - Trauma
    - Larynx/Trachea
    - Pulmonary contusion
    - Lung lobe torsion
    - Endotracheal intubation
    - Bronchoscopy
    - Aspiration biopsy of the lung
  - Pulmonary thromboembolism
    - Dirofilaria sp. [esp Dog]
    - Angiostrongylus sp. [Dog]
    - Aelurostrongylus sp. [Cat]
    - Larva migrans
    - Cardiomyopathy
    - Septicaemia/Endocarditis
    - Surgery
    - DIC
    - Hyperviscosity syndrome
    - Glomerulonephritis

- Renal amyloidosis
- Hypercortisolism  
(Cushing's Disease) [Dog]
- Hypothyroidism [Dog]
- Pancreatitis
- Immune haemolytic anaemia
- Coagulopathy
  - Dicoumarol/Warfarin poisoning
  - DIC
  - Acetylsalicylic acid
  - Heparin
- Bronchopneumonia/  
Pulmonary abscess
- Pulmonary Tumours
  - Primary Tumours
  - Adenocarcinoma
  - Squamous cell carcinoma
  - Tumour metastasis
  - Thyroid carcinoma
  - Mammary carcinoma
  - Haemangiosarcoma
  - Osteosarcoma
  - Squamous cell carcinoma
  - Transitional cell carcinoma
  - Melanoma
  - Lymphosarcoma [esp Cat]
  - Malignant Histiocytosis  
[Bernese Mountain Dog]
  - Adenocarcinoma
- Pulmonary Oedema
- Cat Flu [Cat]
- Feline Herpes virus  
[Cat]
- Feline Calici virus  
[Cat]
- Kennel Cough [Dog]
- Canine Herpes virus  
[Dog]
- Canine Adenovirus I, II  
[Dog]
- Parainfluenza virus [Dog]
- Canine Reovirus I, II, III  
[Dog]
- Tracheal collapse [Dog]
- Brachycephalic syndrome
- Allergic Tracheobronchitis
  - Feline Asthma [Cat]
  - Eosinophilic Bronchitis
  - Atopy/Inhalation  
allergy
- Bronchial Compression
  - Left atrial cardiac  
enlargement
  - Mediastinal lymph-  
adenopathy
  - Heart base tumour  
(Chemodectoma) [Dog]
  - Thyroid carcinoma
  - Thymoma
- Tracheal hypoplasia
- Overlong soft palate  
[esp Dog]
- Laryngeal paralysis
- Bacterial Tracheobronchitis
- Parasitic Tracheobronchitis

## Dry, Tickly Cough

- Viral Tracheobronchitis
  - Canine distemper virus  
[Dog]

## Diagnostic Approach

### Cough

#### 1. Case History

#### 2. General Examination

#### 3. Pharyngeal Examination

#### 4. X-Ray Study

- Thorax
- Throat
- Abdomen

#### 5. Ultrasound

- Heart (Doppler Echocardiography)
- Thorax
- Abdomen

#### 6. Thoracocentesis (in case of effusion)

- Fluid Analysis
  - Colour
  - Specific gravity
  - TP
  - Rivalta Test [Cat]
  - Alb/Glob Ration
  - LDH
  - Bilirubin
  - Crea
  - Amylase, Lipase
  - Ether clearance test
  - Cholesterol, Triglycerides
  - Leucocyte number
  - Differential cell profile
  - Tumour cytology
  - Bacterial culture
  - Fungal culture

#### 7. Blood Tests

- Hct, Ery, Leuc, Hb
- TP, Albumin, Globulin
- Na, K, Ca

- GPT, AP, Urea, Crea, BG
- MCH, MCV, MCHC
- Diff BC
- Amylase, Lipase [Dog]
- Blood Gas Analysis (BGA)
- $\alpha$  HBDH
- Troponin
- ANP

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Dirofilaria Antigen [Dog]

#### **FUNCTION TESTS**

- $T_4$ , f $T_4$

#### **COAGULATION**

- Prothrombin time (PT/Quick)
- (Activated) partial Thromboplastin time (PTT/aPTT)
- Thrombocyte number

#### 8. Urinalysis

- Urine dip stick
- Specific gravity
- Urine sediment

#### 9. Faecal Examination

- Flotation
- Baermann-Wetzel Method

#### 10. Endoscopy

- Bronchoscopy
  - ± Tracheobronchial lavage
    - Bacterial culture
    - Fungal culture
    - Cytology

#### 11. Further Tests

- Canine Distemper virus Antigen (Conjunctival smear) [Dog]

## Lung Sounds

Audible sounds of the lung via auscultation

**Inspiratory Sounds:** Extrathoracic respiratory tract obstruction/stenosis

**Expiratory Sounds:** Intrathoracic respiratory tract obstruction/stenosis

### Bronchial Respiratory Sound

#### Loud

- Tracheobronchitis
- Allergic bronchitis/feline asthma
- Respiratory tract obstruction
- Pulmonary fibrosis
- Pulmonary tumours

#### Quiet

- Normal finding

### Vesicular Respiratory Sound

#### Loud

- Hyperventilation
  - Excitement
  - Pain
  - Metabolic acidosis
  - Anaemia
  - Dyspnoea
- Atelectasis  
(paradoxical conduction)

#### Quiet

- Normal finding
- Emphysema
- Pulmonary tumours
- Mediastinal tumours
- Pneumonia/Pulmonary abscess

### Absent

- Pneumothorax
- Thoracic effusion
- Obesity
- Diaphragmatic hernia
- Lung lobe torsion [Dog]
- Atelectasis
- Severe Pneumonia

### Rattling Sound

#### Dry Rattling Sound (Whistling, Wheezing, Humming)

- Respiratory Tract Obstruction
  - Tracheal collapse [Dog]
  - Tracheal hypoplasia
  - Laryngeal paralysis
  - Glottal oedema
  - Foreign body
  - Tumours
- Chronic obstructive Bronchitis
- Allergic Bronchitis/ Feline Asthma
- Chronic Pneumonia

#### Wet Rattling Sound (Rough/Fine Bubbles)

- Pulmonary oedema
- Pneumonia

## Diagnostic Approach

### Lung Sounds

#### 1. Case History

#### 2. General Examination

#### 3. Pharyngeal Examination

#### 4. X-Ray Study

- Thorax
- Throat
- Abdomen

#### 5. Ultrasound

- Heart (Doppler Echocardiography)
- Thorax
- Abdomen

#### 6. Thoracocentesis (in case of effusion)

- Fluid analysis
  - Colour
  - Specific gravity
  - TP
  - Rivalta Test [Cat]
  - Alb/Glob Ratio
  - LDH
  - Bilirubin
  - Crea
  - Amylase, Lipase
  - Ether clearance test
  - Cholesterol, Triglycerides
  - Leucocyte number
  - Differential cell count
  - Tumour cytology
  - Bacterial culture
  - Fungal culture

#### 7. Blood Tests

- Hct, Ery, Leuc, Hb
- TP, Albumin, Globulin

- Na, K, Ca
- GPT, AP, Urea, Crea, BG
- MCH, MCV, MCHC
- Diff BC
- Amylase, Lipase [Dog]
- Blood Gas Analysis (BGA)

#### MICROBIAL SEROLOGY

- FeLV-/FIV Antigen [Cat]
- Dirofilaria Antigen [Dog]

#### FUNCTION TESTS

- T<sub>4</sub>, fT<sub>4</sub>

#### COAGULATION

- Prothrombin time (PT/Quick)
- (Activated) partial Thromboplastin time (PTT/aPTT)
- Thrombocyte number

#### 8. Urinalysis

- Urine dip stick
- Specific gravity
- Urine sediment

#### 9. Faecal Examination

- Flotation
- Baermann-Wetzel Method

#### 10. Endoscopy

- Bronchoscopy
  - ± Tracheobronchial lavage
  - Bacterial culture
  - Fungal culture
  - Cytology

#### 11. Further Tests

- Canine Distemper virus Antigen (Conjunctival smear) [Dog]

## Nasal Discharge

**Rhinorrhoea:** Secretion from the nose, often in combination with sneezing and retching

Common Causes	
Dog	Cat
<b>Unilateral Discharge</b>	
+++ Dental abscess	+++ Nasopharyngeal foreign body
++ Aspergillus rhinitis/sinusitis	
++ Intranasal foreign body	++ Endonasal tumours
<b>Bilateral Discharge</b>	
+++ Viral/bacterial rhinitis	+++ Viral/bacterial rhinitis
++ Aspergillus rhinitis/sinusitis	++ Cryptococcus rhinitis/sinusitis
	++ Nasopharyngeal foreign body

### Unilateral Discharge

### Seromucous Discharge

- Trauma
- Nasopharyngeal foreign body [esp Cat]
- Endonasal tumour
  - Adenocarcinoma
  - Lymphosarcoma
  - Squamous cell carcinoma
  - Osteosarcoma
  - Fibrosarcoma
  - Melanoma
  - Myxosarcoma
  - Nasopharyngeal polyps [Cat]

### Mucopurulent Discharge

- Nasopharyngeal foreign body [esp Cat]
- Oronasal fistula

- Dental abscess
- Cleft palate congenital/traumatic
- Mycotic Rhinitis
  - Cryptococcus sp. [esp Cat]
  - Aspergillus sp. [Dog]
  - Sporothrix sp. [Cat]
  - Rhinosporidium sp. [Dog]
- Parasitic Rhinitis
  - Capillaria sp.
  - (Linguatula sp.)
  - (Pneumonyssus sp.)
  - (Cuterebra sp.)
  - Fly larvae
- Endonasal tumours
  - Adenocarcinoma
  - Lymphosarcoma
  - Squamous cell carcinoma
  - Canine transmissible venereal tumour [Dog]
  - Chondrosarcoma
  - Osteosarcoma

- Fibrosarcoma
- Melanoma
- Nasopharyngeal Polyps [Cat]

## **Haemorrhagic Discharge (Epistaxis)**

- Trauma
- Nasopharyngeal foreign body [esp Cat]
- Oronasal fistula
  - Dental abscess
  - Cleft palate (congenital/traumatic)
- Mycotic Rhinitis
  - Cryptococcus sp. [esp Cat]
  - Aspergillus sp. [Dog]
  - Sporothrix sp. [Cat]
  - Rhinosporidium sp. [Dog]
- Parasitic Rhinitis
  - Capillaria sp.
  - (Linguatula sp.)
  - (Cuterebra sp.)
  - Fly larvae
- Endonasal tumours
  - Adenocarcinoma
  - Lymphosarcoma
  - Squamous cell carcinoma
  - Canine transmissible venereal tumour [Dog]
  - Chondrosarcoma
  - Osteosarcoma
  - Fibrosarcoma
  - Melanoma
  - Myxosarcoma
  - Nasopharyngeal polyps [Cat]

## **Bilateral Discharge**

### **Seromucous Discharge**

- Brachycephalic syndrome

- Narrowing of the nares
- Anomalies of the nasal concha
- Short pharyngeal cavity
- Mucosal hyperplasia
- Overlong soft palate
- Laryngeal collapse
- Tracheal hypoplasia
- Viral Rhinitis (in absence of bacterial secondary infection)
  - Feline Herpes virus [Cat]
  - Feline Calici virus [Cat]
  - Canine Herpes virus [Dog]
  - Canine Adenovirus I, II [Dog]
  - Parainfluenza virus [Dog]
  - Canine distemper virus [Dog]
- Allergic Rhinitis
  - Atopy/Inhalation allergy
- Dyskinesia of the ciliated epithelium
- (Severe pulmonary oedema)

## **Mucopurulent Discharge**

- Nasopharyngeal foreign body [esp Cat]
- Viral Rhinitis (with bacterial secondary infection)
  - Feline Herpes virus [Cat]
  - Feline Calici virus [Cat]
  - Canine Herpes virus [Dog]
  - Canine Adenovirus I, II [Dog]
  - Parainfluenza virus [Dog]
  - Canine distemper virus [Dog]
- Bacterial Rhinitis
  - Pasteurella sp.
  - Bordetella sp.

- *Staphylococcus* sp.
- *Pseudomonas* sp.
- *Chlamydia* sp. [Cat]
- *E. coli*
- *Mycoplasma* sp. [esp Cat]
- Bacterial Bronchopneumonia
  - *Bordetella* sp.
  - *E. coli*
  - *Klebsiella* sp.
  - *Pseudomonas* sp.
  - *Pasteurella* sp.
  - *Staphylococcus* sp.
  - *Streptococcus* sp.
  - *Mycoplasma* sp. [esp Cat]
  - *Mycobacterium* sp.
- Oronasal fistula
  - Cleft palate (congenital/traumatic)
- Mycotic Rhinitis
  - *Cryptococcus* sp. [esp Cat]
  - *Aspergillus* sp. [esp Dog]
  - *Rhinosporidium* sp. [Dog]
- Nasopharyngeal polyps [Cat]
- IgA Deficiency
- Oesophagus/stomach
- Coagulopathy
  - See Epistaxis
- Hyperviscosity syndrome
  - Multiple Myeloma
  - Lymphatic leukaemia [Cat]
  - FIP Coronavirus [Cat]
  - Lupus erythematosus
  - Polycythaemia vera
  - Dehydration
  - (*Leishmania* sp. [esp Dog])
  - (*Ehrlichia* sp. [Dog])
- Tumours
  - Nasopharynx
  - Larynx
  - Trachea
  - Bronchi/Lung
  - Oesophagus/Stomach
- Arterial Hypertension
  - Idiopathic
  - Renal failure
  - Hypercortisolisms (Cushing's Disease) [Dog]
  - Diabetes mellitus
  - Hyperthyroidism [Cat]
  - Central nervous disease
  - Hyperaldosteronism [Dog]
  - Phaeochromocytoma
- Vasculitis
  - FIP Coronavirus [Cat]
  - Canine Coronavirus [Dog]
  - Septicaemia/Endotoxaemia
  - Lupus erythematosus
  - Rheumatoid Disease
  - Polyarteritis nodosa
  - Uraemia

## **Haemorrhagic Discharge (Epistaxis)**

- Head/Thoracic trauma
- Chronic sneezing
  - Viral Rhinitis
  - Bacterial Rhinitis
  - Mycotic Rhinitis
  - Parasitic Rhinitis
- Foreign body
  - Nasopharynx [esp Cat]
  - Larynx
  - Trachea
  - Bronchi/Lung

- Drug allergy
- Food allergy
- (*Leishmania* sp. [esp Dog])
- (*Ehrlichia* sp. [Dog])
- *Dirofilaria* sp. [esp Dog]
- *Angiostrongylus* sp. [Dog]

## Diagnostic Approach

### *Nasal Discharge*

- 1. Case History**
- 2. General Examination**
- 3. Dental/ Pharyngeal Examination**
- 4. Endoscopy**
  - Rhinoscopy
    - ± Nasal flush (retrograde)
    - Bacterial culture
    - Fungal culture
    - Cytology
    - ± Smear of the nasal mucous membrane
    - Bacterial culture
    - Fungal culture
    - Cytology
    - ± Biopsy of the nasal mucous membrane
    - Bacterial culture
    - Fungal culture
    - Cytology
- 5. X-Ray Study**
  - Skull/Tympanic bulla
  - Throat
  - Thorax
- 6. Blood Tests**
  - Hct, Ery, Leuc

- Diff BC
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- FIP Profile [Cat]
  - TP
  - Alb/Glob Ratio
  - Bili
  - GOT
  - Serum electrophoresis

### MICROBIAL SEROLOGY

- FeLV-/FIV Antigen [Cat]
- Aspergillus Antibodies [Dog]
- Cryptococcus Antibodies [Cat]

### COAGULATION (IN CASE OF EPISTAXIS)

- Bleeding time
- Prothrombin time (PT/Quick)
- (Activated) partial Thromboplastin time (PTT/aPTT)
- Fibrin degradation products (FDP)
- Thrombocyte number

### 7. Further Tests

- Canine Distemper antigen [Dog] (Conjunctival smear)

## Epistaxis

Nose bleeds

Common Causes	
Dog	Cat
+++ Trauma	+++ Trauma
+++ Dicoumarol poisoning	++ Cat flu
++ Haemophilia A/B	++ FeLV/FIV- and FIP-associated
++ Von Willebrand Disease	+ Immune thrombocytopenia
++ DIC	+ Arterial Hypertension
++ Aspergillus-Rhinitis	+ Hyperviscosity syndrome
++ Infectious thrombocytopenia	+ Nasopharyngeal foreign bodies
++ Immune thrombocytopenia	+ Nasopharyngeal tumours
++ Intranasal tumours	
++ Intranasal foreign body	

## Unilateral Epistaxis

### Intranasal Causes

- Trauma
- Nasopharyngeal foreign body [esp Cat]
- Oronasal fistula
  - Dental abscess
  - Cleft palate (congenital/traumatic)
- Mycotic Rhinitis
  - Cryptococcus sp. [esp Cat]
  - Aspergillus sp. [Dog]
  - Sporothrix sp. [Cat]
  - Rhinosporidium sp. [Dog]
- Parasitic Rhinitis
  - Capillaria sp.
  - (Linguatula sp.)
  - (Cuterebra sp.)
  - Fly larvae

- Intranasal tumours
  - Adenocarcinoma
  - Lymphosarcoma
  - Squamous cell carcinoma
  - Canine transmissible venereal tumour [Dog]
  - Chondrosarcoma
  - Osteosarcoma
  - Fibrosarcoma
  - Melanoma
  - Myxosarcoma
  - Nasopharyngeal polyps [Cat]

## Bilateral Epistaxis

### Intranasal Causes

- Same causes as in unilateral epistaxis

## Coagulopathies

### Thrombocytopenia

- Bone marrow disease
  - Infectious causes
  - Toxic causes
  - Immunoreactive causes
  - Bone marrow tumours
- DIC
  - Septicaemia/Endotoxaemia
  - Gastric dilation/volvulus [Dog]
  - Pyometra
  - Urinary tract infection
  - Haemorrhagic enteritis
  - Splenic torsion [esp Dog]
  - Acute Pancreatitis
  - Shock
  - Cardiac failure
  - Hepatic failure
  - Haemolysis
  - Snake venom
  - Heat stroke
  - Electric shock
  - Burns
  - FIP Coronavirus [Cat]
  - Tumour Disease
  - Dirofilaria sp. [esp Dog]
- Immune thrombocytopenia
  - Infection
  - Drugs
  - Lupus erythematosus
- Infectious thrombocytopenia
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
  - Parvovirus
  - Canine Distemper virus [Dog]
  - CAV-1 (Hepatitis c. c.) [Dog]
  - Canine Herpes virus [Dog]

- Leptospira sp. [Dog]
- Salmonella sp.
- Haemobartonella sp. [Cat]
- Babesia sp. [esp Dog]
- (Ehrlichia sp. [Dog])
- (Histoplasma sp.)
- Splenomegaly
- Chronic haemorrhage
- Thrombosis

### Thrombocytopathy

- Acquired thrombocytopenia
  - Drugs
  - Uraemia
  - Hepatic failure
  - Acute Pancreatitis
  - Bone tumours
  - Hyperviscosity syndrome
- Congenital thrombocytopathy
  - Von Willebrand Disease [esp Dog]
  - Chediak-Higashi Syndrome [Cat]
  - Thrombasthenia (Glanzmann) [Dog]
  - Platelet aggregation defect
  - Cyclic Neutropenia [Grey Collie]

### Plasmatic Coagulopathy

- Congenital coagulopathy
  - Factor VIII Deficiency (Haemophilia A)
  - Factor IX Deficiency (Haemophilia B)
  - Von Willebrand Disease [esp Dog]
  - Factor VII Deficiency [Dog]
  - Factor X Deficiency [Dog]
  - Factor XI Deficiency [Dog]
  - Factor XII Deficiency (Hagemann) [Cat]

- Vitamin K dependent Coagulopathy [Cat]
- Vitamin K Deficiency/ Antagonism
  - Hepatic failure
  - Malabsorption syndrome
  - Obstructive jaundice
  - Imbalanced intestinal flora (Antibiotics)
  - Dicoumarol poisoning (Rodenticides)
  - Indandione poisoning (Thrombosis prophylaxis)
- DIC

### **Arterial Hypertension**

- Idiopathic
- Renal failure
- Hyperthyroidism [Cat]
- Hypercortisolism (Cushing's Disease) [Dog]
- Diabetes mellitus
- Central nervous Disease
- Hyperaldosteronism [Dog]
- Phaeochromocytoma

### **Hyperviscosity Syndrome**

- Multiple Myeloma
- Lymphatic Leukaemia [Cat]
- FIP Coronavirus [Cat]
- Dehydration
- (Leishmania sp. [esp Dog])
- (Ehrlichia sp. [Dog])
- Lupus erythematosus
- Polycythaemia vera

### **Vasculitis**

- FIP Coronavirus [Cat]
- Canine Coronavirus [Dog]
- Septicaemia/Endotoxaemia
- Lupus erythematosus
- Rheumatoid Disease
- Polyarteritis nodosa
- Uraemia
- Drug/Food allergy
- (Leishmania sp. [esp Dog])
- (Ehrlichia sp. [Dog])
- Dirofilaria sp. [esp Dog]
- Angiostrongylus sp. [Dog]

## **Diagnostic Approach**

### **Epistaxis**

- 1. Case History**
- 2. General Examination**
- 3. Pharyngeal Examination**
- 4. Blood Tests**
  - Hct, Ery, Leuc, Hb
  - TP, Alb, Glob
  - GPT, AP, Urea, Crea, BG
  - FIP Profile [Cat]

- TP
- Alb/Glob Ratio
- Bili
- GOT
- Serum electrophoresis
- Diff BC
- MCV, MCV, MCHC
- Na, K, Ca

**MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen  
[Cat]
- Aspergillus Antibodies
- Cryptococcus-Antibodies  
[Cat]
- Leishmania Antibodies  
[Dog]
- Ehrlichia Antibodies  
[Dog]

**COAGULATION**

- Bleeding time
- Prothrombin time  
(PT/Quick)
- (Activated) partial Thromboplastin time (PTT/  
aPTT)
- Thrombocyte number
- Fibrin degradation product  
(FDP)
- Autoantibodies against thrombocytes
- Von Willebrand Factor
- Determine factors II-XII

**IMMUNOSEROLOGY**

- ANA Test

**FUNCTION TESTS**

- T<sub>4</sub> [Cat]
- T<sub>3</sub> Suppression test [Cat]

**5. Urinalysis**

- Urine dip stick

- Specific gravity
- Urine sediment
- Bence-Jones Proteins

**6. X-Ray Study**

- Skull/Tympanic bulla
- Thorax
- Abdomen

**7. Endoscopy**

- Rhinoscopy
  - ± Nasal flush (retrograde)
  - Bacterial culture
  - Fungal culture
  - Cytology
  - ± Smear of the nasal mucous membrane
  - Bacterial culture
  - Fungal culture
  - Cytology
  - ± Biopsy of the nasal mucous membrane
  - Bacterial culture
  - Fungal culture
  - Cytology

**8. Further Tests**

- Bone marrow biopsy
  - Cytology
- Blood pressure measure (indirect/direct)
- Ultrasound
  - Abdomen
  - Heart

## Reverse Sneezing

Sudden inspiratory sneezing attacks with dyspnoea (1–2 min) of unknown origin. The attack can be disrupted by massaging the larynx or briefly holding the nostrils closed

<b>Common Causes</b>	
Dog	Cat
+ Nasopharyngeal spasm	+++ Nasopharyngeal foreign body
+ Overlong soft palate	+ Cat flu Rhinitis/ Sinusitis
+ Pharyngeal foreign body	
+ Tracheal collapse	+ Nasopharyngeal polyps
+ Laryngeal collapse	
+ Tonsillitis/Tonsillar carcinoma	

## Diagnostic Approach

### *Reverse Sneezing*

- 1. Case History**
- 2. General Examination**
- 3. Pharyngeal Examination**

### **4. Endoscopy**

#### **Rhinoscopy**

- (orthograde/retrograde)
- Laryngo-/Bronchoscopy

# **4 Gastrointestinal Principal Symptoms**

---

Anal Pruritus .....	98
Diarrhoea .....	99
Dysphagia .....	103
Stomatitis.....	104
Vomitus.....	108
Motility Disturbances.....	109
Haematemesis.....	112
Copremesis.....	113
Emaciation .....	114
Hypersalivation.....	117
Coprophagia.....	121
Faeces, Bloody.....	122
Rectal Tenesmus .....	125
Faecal Incontinence .....	127
Meteorism/Flatulence.....	129
Halitosis.....	132
Constipation.....	135
Polyphagia.....	138
Regurgitation .....	141

## **Further Relevant Principal Symptoms**

Abdominal Distention (Ch. 1: General Symptoms) .....
Hepatomegaly (Ch. 1: General Symptoms) .....
Abdominal Effusion (Ch. 1: General Symptoms) .....
Allotriophagia (Ch. 13: Behavioural Problems) .....

## Anal Pruritus

Frequent licking and scooting of the anus

<b>Common Causes</b>	
Dog	Cat
+++ Blocked anal sacs	+++ Blocked anal sacs
+++ Anal gland abscess	+++ Anal gland abscess
++ Proctitis	++ Proctitis
+ Perianal fistulas	++ Urinary Tract Infections
+ Perianal tumours	
+ Urinary Tract Infections	

### Perianal Disease

- Blocked anal sacs
- Anal gland abscess
- Perianal fistulas [Dog]
- Perineal hernia [Dog]
- Perianal wounds
- Perianal tumours
  - Rectal carcinoma
  - Rectal polyp
  - Anal sac adenoma/ carcinoma
  - Anal gland adenoma/ carcinoma
  - Hepatoid adenoma/ carcinoma [Dog]

### Proctitis

- Intestinal parasites
  - Tapeworms
  - *Trichuris* sp. [Dog]
  - *Ancylostoma* sp.
  - *Uncinaria* sp.
  - *Balantidium* sp. [Dog]
  - (*Entamoeba* sp. [Dog])
- Bacterial proctitis
- Tumours

### Other Causes

- Urinary Tract Disease [Bitch/ Cat]
- Vaginal disease
- Rectal prolapse

## Diagnostic Approach

### *Anal Pruritus*

#### 1. Case History

#### 2. General Examination

#### 3. Rectal Examination

± Rectal smear/cytology

**4. Faecal Examination**

- Plain Examination
- Flotation
- Sticky tape impression preparation (anus)

**5. Urinalysis**

(Bitches Only and Cats)

- Urine dip stick

- Specific Gravity

- Urine sediment

**6. X-Ray Study**

- Abdomen/pelvis
- Contrast enema

**7. Endoscopy**

- Colonoscopy ± Biopsy

## Diarrhoea

The passing of loose or liquid bowel movements

**Common Causes**

Dog	Cat
+++ Food poisoning/intolerance	+++ Parasitic enteritis
++ Viral enteritis	++ Viral enteritis
++ Parasitic enteritis	++ Immunoreactive enteritis
++ Immunoreactive enteritis	++ Hyperthyroidism
++ Intestinal tumours	++ Intestinal tumours
+ Motility disturbances	+ Partial bowel obstruction
+ Partial bowel obstruction	+ Organ failure
+ Organ failure	

### Acute Diarrhoea

#### Small Intestinal Diarrhoea

- Viral Enteritis
  - Parvovirus
  - Coronavirus
  - Rotavirus
  - FeLV/FIV [Cat]
  - Canine Distemper virus [Dog]
- Foreign body
- Food poisoning/ Enterotoxins [esp Dog]
  - Staphylococcus Enterotoxin
  - E. coli Enterotoxin
  - Clostridium Enterotoxin
- Partial bowel obstruction
  - Foreign body
  - Intestinal parasites
  - Intestinal tumours
  - Invagination
  - Incarceration (hernia)
- Parasitic Enteritis
  - Giardia sp.
  - Toxocara/Toxascaris sp.
  - Ancylostoma sp.

- *Uncinaria* sp.
- *Strongyloides* sp.
- *Isospora* sp.
- *Cryptosporidium* sp.
- *Toxoplasma* sp.
- Toxic Causes
  - NSAID/Glucocorticoids
  - Cytostatics
  - Antibiotics
  - Antiparasitics
  - Digitalis glycosides
  - Household agents
  - Toxic plants
  - Heavy metal poisoning
  - Organophosphate poisoning
  - Ethylene glycol poisoning
- Bacterial Enteritis
  - *Salmonella* sp.
  - *Bacillus* sp.
  - *Campylobacter* sp.
  - *Yersinia* sp.
  - *Shigella* sp.
  - *E. coli*
  - *Clostridium* sp.
- Food intolerance
- Other Causes
  - Acute pancreatitis [esp Dog]
  - Acute renal failure
  - Acute hepatic failure
  - Diabetic ketoacidosis

## Chronic Diarrhoea

### Small Intestinal Diarrhoea

- Food Intolerance
  - Gluten [Irish Setter]
  - Lactose
  - High caloric/low fibre diets
  - Food allergy
- Partial bowel obstruction
  - Foreign body
  - Intestinal parasites
  - Intestinal tumours
  - Invagination
  - Incarceration (Hernia)
- Viral Enteritis
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
- Parasitic Enteritis
  - *Giardia* sp.
  - *Cryptosporidium* sp.
  - *Toxoplasma* sp.
  - *Isospora* sp.
  - *Toxocara/Toxascaris* sp.
  - *Ancylostoma* sp.
  - *Uncinaria* sp.
  - *Strongyloides* sp.
- Immunoreactive Enteritis
  - Lymphoplasmacellular enteritis
  - Eosinophilic enteritis
  - Granulomatous enteritis
- Intestinal tumours
  - Adenocarcinoma
  - Lymphosarcoma [esp Cat]
  - Fibrosarcoma
  - Leiomyoma/Leiomyosarcoma
  - Gastrinoma (Zollinger-Ellison syndrome)
  - Mast cell tumour [Dog]
- Extraenteral Causes
  - Exocrine pancreatic insufficiency
  - Hyperthyroidism [Cat]
  - Chronic renal failure
  - Chronic hepatic failure
  - Congestive heart failure
  - Diabetes mellitus

- Mast cell tumour [Dog]
- Bacterial Enteritis
  - Dysbacteriosis/bacterial overgrowth
  - *Salmonella* sp.
  - *Campylobacter* sp.
  - *Yersinia* sp.
  - *Clostridium* sp.
- Mycotic Enteritis
  - *Aspergillus* sp.
  - *Candida* sp.
  - (*Histoplasma* sp.)
- Ulcerative enteritis (Duodenal ulcers)
- Lymphangiectasia [Dog]

## **Large Intestinal Diarrhoea**

- Food intolerance
  - Low fibre
  - Food allergy
- Partial colonic obstruction
  - Foreign body
  - Intestinal tumours
  - Invagination
  - Rectal diverticulum
  - Prostatic enlargement [Dog]
- Parasitic colitis
  - *Trichuris* sp. [Dog]
  - *Ancylostoma* sp.

- *Uncinaria* sp.
- *Balantidium* sp. [Dog]
- (*Entamoeba* sp. [Dog])
- Immunoreactive colitis
  - Lymphoplasmacellular colitis
  - Eosinophilic colitis
  - Granulomatous colitis
  - Ulcerative colitis
- Colonic tumours
  - Adenocarcinoma
  - Lymphosarcoma [esp Cat]
  - Leiomyoma/Leiomyosarcoma
  - Polyp
- Viral colitis
  - FeLV/FIV [Cat]
  - FIP Coronavirus (Colonic granulomata) [Cat]
- Bacterial Enteritis
  - Dysbacteriosis/bacterial overgrowth
  - *Salmonella* sp.
  - *Campylobacter* sp.
  - *Clostridium* sp.
- Mycotic colitis
  - (*Histoplasma* sp.)
- Other causes
  - Irritable colon (psychogenic)
  - Coprostasis (paradoxic diarrhoea)

## **Diagnostic Approach**

### *Acute Diarrhoea*

- 1. Case History**
- 2. General Examination**
- 3. Blood Tests**
- Hct, Leuc, TP

- BG
- Na, K, Ca
- 4. Faecal Examination**
- Plain Examination

- Flotation
- Giardia sp. detection
- Bacterial culture

### **5. X-Ray Study**

- Abdomen
- Intestinal contrast medium study

## **Diagnostic Approach**

### *Chronic Diarrhoea*

#### **1. Case History**

#### **2. General Examination**

#### **3. Blood Tests**

- Hct, Ery, Leuc
- Na, K, Ca
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- TLI Test
- Diff BC
- Cholesterol
- Serum Cobalamin (Vit. B<sub>12</sub>)
- Serum Folic acid
- FIP Profile [Cat]
  - TP
  - Alb/Glob Ratio
  - Bili
  - GOT
  - Serum electrophoresis

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen  
[Cat]

#### **FUNCTION TESTS**

- T<sub>4</sub>, fT<sub>4</sub>
- T<sub>3</sub> Suppression Test  
[Cat]
- Xylose Test [Dog]

#### **4. Urinalysis**

- Urine dip stick
- Specific gravity
- Urine sediment

#### **5. Faecal Examination**

- Plain Examination
- Flotation
- Giardia sp. detection
- Bacterial culture
- Fat content (Sudan Staining)
- Chymotrypsin
- Elastase

#### **6. X-Ray Study**

- Abdomen
- Intestinal contrast medium study
- Contrast medium enema

#### **7. Ultrasound**

- Abdomen ± biopsy

#### **8. Endoscopy**

- Gastro-/Duodenoscopy  
± biopsy
- Colonoscopy ± biopsy

#### **9. Further Tests**

- Rectal Examination  
± Colonic Smear/cytology

## Clinical Distinguishing Features of Small/Large Intestinal Diarrhoea

Criteria	Small Intestine	Large Intestine
Increased faecal volume	+	-
Flatulence	(+)	-
Borborygmi	(+)	-
Steatorrhoea	(+)	-
Polydipsia	(+)	-
Weight loss	(+)	-
Tenesmus	-	+
Increased Elimination	-	+
Frequency		
Mucous	-	+
“Scooting”	-	(+)
Faecal consistency	thin/watery	mushy
Blood quality	dark/melaena	light, fresh
Affected general well-being	+	-/+
Vomitus	(+)	-/+

## Dysphagia

Chewing and swallowing disturbance with a normally maintained appetite

Common Causes	
Dog	Cat
+++ Dental Disease	+++ Dental Disease
++ Stomatitis	++ Stomatitis
++ Disease of the jaw	++ Disease of the jaw
++ Tonsillitis/Tonsillar carcinoma	++ Tonsillitis/Tonsillar carcinoma
++ Motility Disorders	++ Motility Disorders

## **Chewing Disorder**

### **Dental Disease**

- Dental fracture
- Dental abscess
- Dental calculus/decay
- Feline Odontoclastic Resorptive Lesions (FORL) [Cat]
- Periodontitis
- Persistent deciduous teeth
- Dental malposition
- Dental root remnants (broken teeth)

### **Oropharyngeal Tumours**

- Papilloma
- Fibroma/Fibrosarcoma
- Squamous cell carcinoma
- Melanoma
- Epulis/Gingival hyperplasia [esp Dog]
- Tonsillar carcinoma
- Salivary gland carcinoma
- Nasopharyngeal polyps [Cat]

### **Salivary Gland Disease**

*Gl. parotis*

*Gl. zygomatica*

*Gl. mandibularis*

*Gl. sublingualis*

- Sialadenitis
- Sialocele/Mucocele/Ranula
- Salivary gland adenoma/carcinoma
- Sialolithiasis

### **Oronasal Fistula**

- Dental abscess

- Foreign body
- Cleft palate (congenital/traumatic)
- Congenital defects of the soft palate

### **Stomatitis/Gingivitis/Glossitis**

- Viral Causes
  - FeLV/FIV [Cat]
  - Feline Calici virus [Cat]
  - Feline Herpes virus [Cat]
  - FIP Coronavirus [Cat]
- Bacterial Causes
  - Streptococcus sp.
  - Staphylococcus sp.
  - Neisseria sp.
  - E. coli
  - Pasteurella sp.
  - Acinetobacter sp.
  - Leptospira sp. [Dog]
  - Actinomyces sp.
  - Nocardia sp.
  - Mycobacterium sp. [Dog]
  - Fusobacterium sp.
  - Spirochetes
- Immunoreactive Causes
  - Eosinophilic granuloma
  - Plasma cell gingivitis/stomatitis
  - Lupus erythematosus
  - Pemphigus vulgaris
- Metabolic Causes
  - Uraemia
  - Hypothyroidism [Dog]
  - Diabetes mellitus
- Toxic Causes
  - Lead poisoning
  - Household agents
  - Poisonous plants
  - Cytostatics

- Chemical burn
- Other Causes
  - Foreign body/abscess
- Mycotic Causes
  - Candida sp.

## Lymphadenopathy

*Ln. parotideus*

*Ln. mandibulares*

*Ln. retropharyngeus lateralis*

*Ln. retropharyngeus medialis*

- Bacterial infections (local/generalised)
- Tumour disease
- Viral infections
- Rickettsial infections
- Systemic mycotic infection

## Orthodontic Disease

- Lower jaw luxation
- Upper/Lower jaw fracture
- Bone tumour
- Craniomandibular osteopathy
- Osteomyelitis
- Fracture of the hyoid bone
- Temporomandibular joint disease

## Masticatory Muscle Disease (Temporomandibular Myositis)

- Congenital Causes
  - Muscular dystrophy [Dog]
  - Dermatomyositis [Dog]
  - Glycogen storage disease
- Inflammatory Causes
  - Toxoplasma sp.
  - Neospora sp. [Dog]
  - Lyme Borrelia sp. [Dog]
  - Leptospira sp. [Dog]

- Immunoreactive Causes
  - Eosinophilic Myositis [Dog]
- Metabolic Causes
  - Vitamin E Deficiency
  - Hypokalaemia [esp Cat]
  - Hypercortisolism (Cushing's Disease) [Dog]
  - Glucocorticoid long term therapy
  - Hypothyroidism [Dog]

## Neurological Disease

- Encephalitis/  
Meningoencephalitis
- Brain tumours
- Cervical spine disease
- Paralysis
  - Trigeminal nerve (V)  
(Masticatory muscle)
  - Facial nerve (VII) (orofacial musculature)
  - Hypoglossal nerve (XII)  
(Glossal musculature)
  - Glossopharyngeal nerve (XI) (Pharynx/Larynx musculature/oesophagus)
  - Vagal nerve (X) (Pharynx/  
Laryngeal musculature/  
oesophagus, palate)
- Polyneuropathy

## Congenital Causes

- Axonopathy
- Demyelinisation disease
- Lysosomal storage disease

## Inflammatory Causes

- Polyradiculoneuritis
- Polyneuritis

- FeLV/FIV [Cat]
- Toxoplasma sp.
- Neospora sp. [Dog]

### **Immunoreactive Causes**

- Lupus erythematosus
- Myasthenia gravis

### **Metabolic Causes**

- Hypothyroidism [Dog]
- Diabetes mellitus
- Paraneoplastic syndrome (Insulinoma)

### **Toxic Causes**

- Organophosphate poisoning (chronic)
- Lead poisoning
- Cytostatics
- Lindane
- Botulism
- Tick paralysis

### **Other Causes**

- Nerve compression syndrome
- Feline Dysautonomia [esp Cat]
- Loss of smell/taste
- Psychogenic Causes
  - Stress
  - Depression/Grief
- Traumatic Causes
  - Bitten off tongue
  - Torn frenulum
  - Burns
  - Cleft palate

- Foreign body
- Pain

## **Difficulty Swallowing**

### **Pharyngeal Disease**

- Pharyngitis (same causes as Stomatitis)
- Tonsillitis
- Tonsillar carcinoma
- Foreign body
- Peritonsillar abscess

### **Oesophageal Disease**

- Oesophagitis
  - Spirocerca Granulomata [Dog]
  - Reflux oesophagitis [Dog]
  - Chronic vomitus
- Oesophageal stenosis
  - Foreign body
  - Oesophageal tumours
  - Oesophageal stricture
  - Hiatus hernia
  - (Spirocerca Granulomata [Dog])
- Motility disturbances/
  - Megaoesophagus
    - Cricopharyngeal achalasia
    - Oesophageal diverticulum
    - Persistent right aortic arch
    - Oesophageal foreign body
    - Oesophageal tumours
    - Oesophageal stricture
    - Hiatus hernia
    - Myasthenia gravis

- Polyneuritis
- Polymyositis
- Lupus erythematosus
- Feline dysautonomia [esp Cat]
- Botulism
- Tetanus [esp Dog]
- Canine Distemper Virus [Dog]
- Lead poisoning
- Thallium poisoning
- Organophosphate poisoning
- Acrylamide poisoning
- Hypocortisolism (Addison's Disease) [Dog]
- Hypothyroidism [Dog]
- Thymoma
- Bilateral vagal nerve paralysis
- Paralysis of the glossopharyngeal nerve
- (*Trypanosoma cruzi* [Dog])
- (*Spirocerca Granulomata* [Dog])

## Diagnostic Approach

### *Dysphagia*

- 1. Case History**
- 2. General Examination**
- 3. Oropharyngeal and Jaw Examination**
- 4. Neurological Examination**

- Cranial Nerves
- 5. X-Ray Study**
  - Skull
    - Tympanic bulla
    - Upper/lower jaw
    - Teeth
  - Throat
  - Thorax
  - Contrast Swallowing study/  
Fluoroscopy

- 6. Blood Tests**
  - Hct, Ery, Leuc, Hb
  - TP, Alb, Glob
  - GPT, AP, Urea, Crea, BG

- Diff BC
- Na, K, Ca, P
- Chol, CK

### MICROBIAL SEROLOGY

- FeLV-/FIV Antigen [Cat]

### IMMUNOSEROLOGY

- ANA Test
- Autoantibodies against acetylcholine receptors (Myasthenia gravis detection)

### FUNCTION TESTS

- Adrenal gland function tests [Dog]
  - Dexamethasone Suppression test
  - ACTH Stimulation test
  - Cortisol/Creatinine Ratio
- T<sub>4</sub>, fT<sub>4</sub>

### **7. Urinalysis**

- Urine dip stick

- Specific gravity
- Urine sediment

## **8. Endoscopy**

- Oesophago-/Gastroscopy

## **9. Further Tests**

- Electromyography (EMG)
- Muscle biopsy
- Spinal tap/analysis

# **Vomitus**

Retrograde evacuation of the stomach

## **Common Causes**

Dog	Cat
+++ Food intolerance	+++ Food intolerance
++ Ingestion of grass (cause or effect?)	++ Ingestion of grass (cause or effect)
++ Gastritis	++ Gastritis
++ Gastric/Intestinal ulcer	++ Gastric/Intestinal ulcer
++ Gastrointestinal obstruction	++ Gastrointestinal obstruction
++ Motility disturbances	++ Motility disturbances
+ Organ failure	+ Organ failure

## **Acute Vomitus**

### **Acute Gastritis**

- Foreign body
- Food intolerance/ Enterotoxins
- Viral Gastroenteritis
  - Parvovirus
  - Coronavirus
  - Rotavirus
  - FeLV/FIV [Cat]
  - Canine Distemper Virus [Dog]
- Parasitic gastroenteritis
  - *Olulanus* sp. [Cat]
  - *Physaloptera* sp.
- Giardia sp.
- *Toxocara/Toxascaris* sp.
- *Ancylostoma* sp.
- *Stenocephala* sp.
- *Strongyloides* sp.
- *Isospora* sp.
- (*Spirocercia* sp. [Dog])
- Toxic Gastroenteritis
  - Beta<sub>2</sub> Agonists
  - Apomorphine [Dog]
  - Xylazine
  - Syrup of ipecac [Cat]
  - Ephedrine
  - Local anaesthetics
  - Tricyclic antidepressants

- Loperamide
- Bromocriptine
- Cytostatics
- Tetracyclines
- Chloramphenicol
- Antiparasitics
- Digitalis Glycosides
- Household agents
- Toxic plants
- Heavy metal poisoning
- Organophosphate poisoning
- Ethylene glycol poisoning
- Acetylsalicylic acid
- Paracetamol
- Ibuprofen
- Indomethacin
- Bacterial gastroenteritis
  - Dysbacteriosis/bacterial overgrowth
  - *Salmonella* sp.
  - *Campylobacter* sp.
  - *Yersinia* sp.
  - *Shigella* sp.
  - *E. coli*
  - *Clostridium* sp.
  - *Helicobacter* sp.
  - *Gastospirillum* sp.
- Food intolerance/allergy
- Other causes
  - Uraemia
  - CNS Trauma

## Gastrointestinal Obstruction

- Gastric dilation/volvulus [Dog]
- Mechanical Ileus
  - Foreign body
  - Intestinal parasites
  - Intestinal tumours
  - Invagination
  - Incarceration (Hernia)

- Volvulus
- Pyloric stenosis
- Constipation

## Other Causes

- Acute pancreatitis
- Acute renal failure
- CNS Disease

## Chronic Vomitus

### Chronic Gastroenteritis

- Food intolerance/allergy
- Parasitic gastroenteritis
- Immunoreactive gastroenteritis (Inflammatory Bowel Disease)
  - Lymphoplasmacellular gastroenteritis
  - Eosinophilic gastroenteritis
  - Granulomatous gastroenteritis
- Gastric/Duodenal ulcer
- Foreign body
- Food intolerance/Enterotoxins
- Viral gastroenteritis
- Bacterial gastroenteritis
- Lymphangiectasia [Dog]
- Paraneoplastic syndrome
  - Mast cell tumour [Dog]
  - Gastrinoma
- Mycotic gastroenteritis
  - (*Histoplasma* sp.)
  - (*Aspergillus* sp.)
  - (*Candida* sp.)

## Gastrointestinal Motility Disturbance

- Pyloric stenosis [Dog]
- Gastroenteritis
- Gastric/Duodenal ulcer

- Gastric/Intestinal tumour
- Gastropexy [Dog]
- Postoperative intestinal atony
- Peritonitis
- Uraemia
- Hypokalaemia [esp Cat]
- Hypothyroidism [Dog]
- Diabetic ketoacidosis
- Pancreatitis
- Hepatic encephalopathy
- Feline dysautonomia [esp Cat]

### Gastric/Intestinal Tumours

- Adenocarcinoma
- Lymphosarcoma [esp Cat]
- Polyps
- Leiomyoma/Leiomyosarcoma
- Fibrosarcoma

### Other Causes

- Pancreatitis

- Congestive cardiac failure
- Chronic renal failure
- Chronic hepatic failure
- Hyperthyroidism [Cat]
- Diabetes mellitus
- Hypokalaemia [esp Cat]
- Hypercalcaemia
- Hypocortisolism (Addison's Disease) [Dog]
- Metabolic Acidosis
- Partial intestinal obstruction
  - Foreign body
  - Intestinal tumours
  - Invagination
  - Incarceration (Hernia)
- Vestibular Disturbances
- Central nervous Disease
  - Encephalomeningitis
  - Cerebral oedema
  - Brain tumours
- Constipation

## Diagnostic Approach

### Vomitus

- 1. Case History**
- 2. General Examination**
- 3. X-Ray Study**
  - Abdomen
  - Thorax
  - Intestinal contrast study
- 4. Blood Tests**
  - Hct, Ery, Leuc
  - TP, Alb, Glob
  - GPT, AP, Urea, Crea, BG
  - Na, K, Ca

- Amylase, Lipase [Dog]
- Diff BC
- Cholesterol
- Serum bile acids
- Serum Gastrin
- Ammonium
- FIP Profile [Cat]
  - TP
  - Alb/Glob Ratio
  - Bili
  - GOT
  - Serum electrophoresis

**MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]

**FUNCTION TESTS**

- T<sub>4</sub>, fT<sub>4</sub>
- T<sub>3</sub> Suppression Test [Cat]
- Adrenal gland function test [Dog]
  - Dexamethasone Suppression test
  - ACTH Stimulation test
  - Cortisol/Creatinine Ratio

**5. Urinalysis**

- Urinary output/volume
- Urine dip stick
- Specific gravity
- Urine sediment

**6. Faecal Examination**

- Plain examination
- Flotation
- Bacterial culture
- Fungal culture

**7. Ultrasound**

- Abdomen ± liver biopsy
- Heart (Doppler Echocardiography)

**8. Endoscopy**

- Oesophago-/Gastro-/  
Duodenoscopy ± Biopsy

**9. Further Tests**

- Laparotomy
- Spinal tap/analysis

## Clinical Distinguishing Features of Vomitus/ Regurgitation

Criteria	Vomitus	Regurgitation
Time period after food intake	delayed	Immediate or delayed
Attempts to swallow	once	several
Bile	+	
pH-level	< 5.0	neutral
Mucous		+
Weight loss		+
Dyspnea/Cough		+
Metabolic Alkalosis/Acidosis	+	
Hypokalaemia/Hypochloraemia	+	

## Haematemesis

Vomitus of blood

Common Causes	
Dog	Cat
+++ Foreign body	+++ Foreign body
++ Gastric/intestinal ulcer	++ Gastric/intestinal ulcer
++ Gastric/intestinal tumour	++ Gastric/intestinal tumour

## Gastrointestinal Causes

### Acute Causes

- Foreign body
- Traumatic blood vessel/organ rupture
- Oesophageal varices

### Chronic Causes

- Foreign body
- Chronic vomitus
- Gastric/intestinal ulcer
  - Helicobacter sp.
  - Gastrospirilium sp.
  - NSAID
  - Glucocorticoids
  - Uraemia

- Stress
- Mast cell tumour [esp Dog]
- Gastrinoma (Zollinger-Ellison Syndrome)
- Gastroenteritis
- Gastric/Intestinal tumour
  - Adenocarcinoma
  - Lymphosarcoma [esp Cat]

### Other Causes

- Swallowed blood
  - Epistaxis
  - Haemorrhage into the respiratory tract
  - Haemorrhage into the oral cavity
- Coagulopathy

## Diagnostic Approach

### *Haematemesis*

- 1. Case History**
- 2. General Examination**
- 3. Pharyngeal Examination**

### **4. Blood Tests**

- Hct, Ery, Leuc, Hb
- TP, Alb, Glob
- GPT, AP, Urea, Crea

- Amylase, Lipase [Dog]

### **COAGULATION**

- Bleeding time
- Prothrombin time (PT/Quick)
- (Activated) partial Thromboplastin time (PTT/aPTT)
- Fibrin degradation products (FDP)
- Thrombocyte number

### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]

- Helicobacter Antibodies

### **5. X-Ray Study**

- Abdomen
- Thorax
- Throat

### **6. Endoscopy**

- Gastro-/Duodenoscopy ± Biopsy
- Bronchoscopy
- Rhinoscopy ± Biopsy

## **Copremesis**

Vomitus of faecal matter

### **Common Causes**

Dog	Cat
+++ Foreign body ileus	+++ Foreign body ileus
++ Invagination	++ Invagination
++ Intestinal parasites	++ Intestinal parasites
++ Intestinal tumours	++ Intestinal tumours

## **Gastrointestinal Obstruction**

### **Mechanical Ileus**

- Foreign body
- Intestinal parasites

- Intestinal tumours
- Invagination
- Incarceration (Hernia)
- Volvulus
- Constipation

## **Diagnostic Approach**

### *Copromesis*

#### **1. Case History**

#### **2 General Examination**

#### **3. X-Ray Study**

- Abdomen
- Intestinal contrast medium study

**4. Blood Tests**

- Hct, Ery, Leuc, Hb

- TP
- Na, K, Ca

**Emaciation**

Weight loss reaching cachexia/marasmus

**Common Causes**

Dog	Cat
+++ Dysphagia	+++ Dysphagia
++ Diabetes mellitus	++ Hyperthyroidism
++ Malabsorption syndrome	++ Diabetes mellitus
++ Maldigestion syndrome	++ Malabsorption syndrome
++ Tumour cachexia	++ Maldigestion syndrome
++ Chronic renal failure	++ Tumour cachexia
	++ Chronic renal failure

**Impaired Food Intake****General Causes**

- Quantitative/qualitative malnutrition
- Dysphagia
- Anorexia
- Chronic vomitus
- Chronic regurgitation
- Chronic diarrhoea
- Motility disturbances
- Muscle weakness

**Impaired Food Utilisation****Malabsorption Syndrome**

- Viral Enteritis
  - Parvovirus
  - Rota-/Coronavirus
  - FeLV/FIV [Cat]
  - Canine Distemper virus [Dog]

- Bacterial Enteritis
  - *Salmonella* sp.
  - *Campylobacter* sp.
  - *Yersinia* sp.
  - *Shigella* sp.
  - *E. coli*
  - *Clostridium* sp.
  - *Helicobacter* sp.
  - Dysbacteriosis
- Parasitic Enteritis
  - **Protozoa**
    - *Giardia* sp.
    - *Toxoplasma* sp.
    - *Cystoisospora* sp.
    - *Cryptosporidium* sp.
    - (*Entamoeba* sp. [Dog])
  - **Roundworms**
    - *Toxocara* spp.
    - *Toxascaris* sp.
    - *Ancylostoma* sp.
    - *Uncinaria* sp.
    - *Trichuris* sp. [Dog]

- Strongyloides sp.
- (Spirocerca sp. [Dog])
- **Tapeworms**
  - Dipylidium sp.
  - Joyeuxiella sp.
  - Diphyllobothrium sp. [Dog]
  - Spirometra sp. [Dog]
  - Echinococcus sp.
  - Taenia spp.
  - Mesocestoides sp.
- Food Intolerance
  - Lactose
  - Gluten [Dog]
  - Food allergy
- Immunoreactive Enteritis  
(Inflammatory bowel disease)
  - Lymphoplasmacellular Enteritis
  - Eosinophilic Enteritis
  - Granulomatous Enteritis
- Intestinal tumours
  - Lymphosarcoma
  - Adenocarcinoma
  - Fibrosarcoma
  - Leiomyoma/  
Leiomyosarcoma
  - Undifferentiated sarcoma
  - Gastrinoma (Zollinger-Ellison Syndrome)
- Gastric/Intestinal ulcer
- Mycotic Enteritis
  - (Candida sp.)
  - (Histoplasma sp.)
  - (Aspergillus sp.)
- Toxic Enteritis
  - Enterotoxins
  - Drugs
  - Poisoning
- Lymphangiectasia [Dog]

## Maldigestion Syndrome

- Exocrine pancreatic insufficiency
- Bile acid deficiency

## Endocrine Causes

- Diabetes mellitus
- Hypocortisolism (Addison's Disease) [Dog]

## Organ Failure

- Cardiac failure
- Hepatic failure
  - Portosystemic Shunt
  - Cirrhosis
- Renal failure

## Calorie Loss

### Protein Loss

- Protein-losing enteropathy
- Protein-losing nephropathy
- Exsudative body cavity effusions
- Chronic haemorrhage
- Burns

### Energy Loss

- Hyperthyroidism [Cat]
- Fever
- Pregnancy
- Lactation
- Systemic infection
- Tumour cachexia
- Exposure to the cold

## Diagnostic Approach

### *Emaciation*

#### **1. Case History**

#### **2. General Examination**

#### **3. Oral/ Pharyngeal Examination**

#### **4. Blood Tests**

- Hct, Ery, Leuc, Hb
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- Amylase, Lipase
- TLI Test
- Bile acids
- Ammonium
- Diff BC
- Na, K, Ca, P
- Vit. B<sub>12</sub>
- FIP Profile [Cat]
  - TP
  - Alb/Glob Ratio
  - Bili
  - GOT
  - Serum electrophoresis

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]

#### **FUNCTION TESTS**

- T<sub>4</sub>, fT<sub>4</sub>
- T<sub>3</sub> Suppression test [Cat]
- Adrenal gland function test [Dog]

- Dexamethasone Suppression test

- ACTH Stimulation test

- Cortisol/Creatinine Ratio

#### **5. Urinalysis**

- Urine dip stick
- Specific gravity
- Urine sediment

#### **6. Faecal Examination**

- Plain examination
- Flotation
- Chymotrypsin
- Elastase

#### **7. X-Ray Study**

- Abdomen
- Thorax
- Skull (in cases of dysphagia)

#### **8. Ultrasound**

- Heart (Doppler Echocardiography)
- Abdomen ( $\pm$  Liver biopsy)

#### **9. Endoscopy**

- Gastro-/Duodenoscopy
- $\pm$  Biopsy

#### **10. Further Tests**

- Analysis of body cavity fluid
- Spinal tap/analysis

## Hypersalivation

Excessive production of spittle

Common Causes	
Dog	Cat
+++ Dental Disease	+++ Dental Disease
++ Stomatitis/Pharyngitis	++ Stomatitis/Pharyngitis
++ Malocclusion syndrome	++ Malocclusion syndrome
++ Organophosphate poisoning	++ Organophosphate poisoning
+(Rabies)	+(Rabies)

## Oropharyngeal Causes

### Malocclusion Syndrome

- Lip anomalies
- Dental malposition
- Jaw anomaly (Prognathism/ Brachygnathism)

### Dental Disease

- Dental fracture
- Dental abscess
- Tartar/decay
- Feline odontoclastic resorptive lesion (FORL)[Cat]
- Periodontitis
- Persistent deciduous teeth
- Dental malposition
- Dental root remnants (broken teeth)

### Oral/Pharyngeal Tumours

- Papilloma
- Fibroma/Fibrosarcoma
- Squamous cell carcinoma

- Melanoma
- Epulis/Gingival hyperplasia [esp Dog]
- Tonsillar carcinoma
- Salivary gland carcinoma
- Nasopharyngeal polyps [Cat]

### Salivary Gland Disease

*Gl. parotis*

*Gl. zygomatica*

*Gl. mandibularis*

*Gl. sublingualis*

- Sialadenitis
- Sialocele/Mucocele/Ranula
- Salivary gland adenoma/ carcinoma
- Sialolithiasis

### Oronasal Fistula

- Dental abscess
- Foreign body
- Cleft palate (congenital/ trauma)

## **Stomatitis/Gingivitis/Glossitis/ Tonsillitis**

- Viral Causes
  - FeLV/FIV [Cat]
  - Feline Calici virus [Cat]
  - Feline Herpes virus [Cat]
  - (FIP Coronavirus [Cat])
- Bacterial Causes
  - Streptococcus sp.
  - Staphylococcus sp.
  - Neisseria sp.
  - E. coli
  - Pasteurella sp.
  - Acinetobacter sp.
  - Leptospira sp. [Dog]
  - Actinomyces sp.
  - Nocardia sp.
  - Mycobacterium sp. [Dog]
  - Fusobacterium sp.
  - Spirochetes
- Immunoreactive Causes
  - Eosinophilic Granuloma
  - Plasma cell gingivitis/stomatitis
  - Lupus erythematosus
  - Pemphigus vulgaris
- Metabolic Causes
  - Uraemia
  - Hypothyroidism [Dog]
  - Diabetes mellitus
- Toxic Causes
  - Lead poisoning
  - Household agents
  - Toxic plants
  - Cytostatics
  - Chemical burn
- Other Causes
  - Foreign body/abscess
- Mycotic Causes
  - Candida sp.

## **Other Causes**

### **Poisoning**

- Organophosphates
- Carbamates
- Pyrethrins/Pyrethroids
- Ivermectin
- Household agents
- Toxic plants/animals

### **Psychoneural Reflex Response**

- Excitement
- Pain
- Pawlow Reflex
- Taste aversion (bitter)
- Hyperthermia
- Kinetosis/Motion sickness
- Nausea

### **Orthodontic Disease**

- Mandibular luxation
- Maxillary/Mandibular fracture
- Bone tumours
- Craniomandibular osteopathy
- Osteomyelitis
- Hyoid bone fracture
- Temporomandibular disease

### **Masticatory Muscle Disease/ Temporomandibular Myositis**

- Congenital Causes
  - Muscular dystrophy [Dog]
  - Dermatomyositis [Dog]
  - Glycogen storage disease
- Inflammatory Causes
  - Toxoplasma sp.
  - Neospora sp. [Dog]
  - Lyme Borreliosis sp. [Dog]
  - Leptospira sp. [Dog]

- Immunoreactive Causes
  - Eosinophilic Myositis [Dog]
- Metabolic Causes
  - Vitamin E Deficiency
  - Hypokalaemia [esp Cat]
  - Hypercortisolism (Cushing's Disease) [Dog]
  - Glucocorticoid long term therapy
  - Hypothyroidism [Dog]

## **Neurological Disease**

- Encephalitis/  
Meningoencephalitis
- Brain Tumours
- Cervical spine disease
- Paralysis
  - Trigeminal nerve (V)  
(Masticatory muscle)
  - Facial nerve (VII) (orofacial musculature)
  - Hypoglossal nerve (XII)  
(Glossal musculature)
  - Glossopharyngeal nerve (XI) (Pharyngeal/Laryngeal musculature/oesophagus)
  - Vagal nerve (X)  
(Pharyngeal/Laryngeal musculature/oesophagus,  
hard palate)
- Polyneuropathy

### **Congenital Causes**

- Axonopathy
- Demyelinisation disease
- Lysosomal storage disease

### **Inflammatory Causes**

- Polyradiculoneuritis

- Polyneuritis
- FeLV/FIV [Cat]
- Toxoplasma sp.
- Neospora sp. [Dog]

### **Immunoreactive Causes**

- Lupus erythematosus
- Myasthenia gravis

### **Metabolic Causes**

- Hypothyroidism [Dog]
- Diabetes mellitus
- Paraneoplastic syndrome  
(Insulinoma)

### **Toxic Causes**

- Organophosphate poisoning  
(chronic)
- Lead Poisoning
- Cytostatics
- Lindane
- Botulism
- Tick paralysis

### **Other Causes**

- Nerve compression syndrome
- Feline dysautonomia  
[esp Cat]
- Loss of smell/taste

### **Other Causes**

- Seizures
- Traumatic Causes
  - Bitten off tongue
  - Torn Frenulum
  - Burns
  - Cleft palate
  - Foreign body
- Oesophageal foreign body

## Diagnostic Approach

### Hypersalivation

- 1. Case History**
- 2. General Examination**
- 3. Oral/Pharyngeal/ Jaw Examination**
- 4. Neurological Examination**
  - Cranial nerves
    - Facial symmetry (VII)
    - Facial sensation(V)
    - Menace reflex (II, VII)
    - Blink reflex (V, VII)
    - Corneal reflex/ Eye movement (V, VI, VII/III, IV, VI)
    - Pupillary reflex (III, Sympathetic nerve)
    - Swallowing reflex/glossal motor function (X, XI, XII/ XII)
- 5. X-Ray Study**
  - Skull
    - Tympanic bulla
    - Maxilla/Mandible
    - Teeth
  - Throat
  - Thorax
  - Contrast swallowing study/ Fluoroscopy
- 6. Blood Tests**
  - Hct, Ery, Leuc, Hb
  - TP, Alb, Glob

- GPT, AP, Urea, Crea, BG
- Diff BC
- Na, K, Ca, P
- Chol, CK

### MICROBIAL SEROLOGY

- FeLV-/FIV Antigen [Cat]

### IMMUNOSEROLOGY

- ANA Test
- Autoantibodies against acetylcholine receptors (Myasthenia gravis detection)

### FUNCTION TESTS

- Adrenal gland function test [Dog]
  - Dexamethasone Suppression test
  - ACTH Stimulation test
  - Cortisol/Creatinine Ratio
- T<sub>4</sub>, fT<sub>4</sub>

### 7. Urinalysis

- Urine dip stick
- Specific gravity
- Urine sediment

### 8. Endoscopy

- Oesophagoscopy/Gastroscopy

### 9. Further Tests

- Muscle biopsy
- Spinal tap/analysis

# Coprophagia

Ingestion of faeces

Common Causes	
Dog	Cat
+++ Idiopathic	Rare
++ Maldigestion syndrome	
+ Endocrinopathies	
+ Intestinal parasites	

## Psychogenic Causes

- Playing habit
- Behavioural disorder
- Boredom

- Diphyllobothrium sp. [Dog]
- Spirometra sp. [Dog]
- Echinococcus sp.
- Taenia spp.
- Mesocestoides sp.

## Organic Causes

### Malabsorption syndrome

- Intestinal parasites

#### Protozoa

- Giardia sp.
- Toxoplasma sp.
- Cystoisospora sp.
- Cryptosporidium sp.
- (*Entamoeba* sp. [Dog])

#### Roundworms

- *Toxocara* spp.
- *Toxascaris* sp.
- *Ancylostoma* sp.
- *Uncinaria* sp.
- *Trichuris* sp. [Dog]
- *Strongyloides* sp.
- (*Spirocercus* sp. [Dog])

#### Tapeworms

- *Dipylidium* sp.
- *Joyeuxiella* sp.

### Maldigestion syndrome

- Exocrine pancreatic insufficiency
- Bile acid deficiency

### Endocrine Causes

- Hypercortisolism (Cushing's Disease) [Dog]
- Diabetes mellitus
- Hyperthyroidism [Cat]

### Other Causes

- Malnutrition?
- Glucocorticoid long-term therapy

## Diagnostic Approach

### Coprophagia

#### 1. Case History

#### 2. General Examination

#### 3. Blood Tests

- Hct, Ery, Leuc, Hb
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- TLI Test
- Amylase, Lipase [Dog]
- Bile acids
- Diff BC
- Na, K, Ca, P

#### FUNCTION TESTS

- Adrenal gland function test [Dog]
  - Dexamethasone Suppression test
  - ACTH Stimulation test
  - Cortisol/Creatinine Ratio
- T<sub>4</sub>, fT<sub>4</sub>

#### 4. Faecal Examination

- Plain examination
- Flotation
- Chymotrypsin
- Elastase

## Faeces, bloody

**Melena/tarry stools:** dark, digested blood contained in faeces (upper gastrointestinal haemorrhage)

**Haematochezia:** bright, undigested blood contained in faeces (lower gastrointestinal haemorrhage)

**Haemorrhagic diarrhoea:** bright and dark blood contained in faeces (upper and lower gastrointestinal haemorrhage)

### Common Causes

Dog	Cat
<b>Melena</b>	
+++ Gastric/Duodenal ulcer	+++ Gastric/Duodenal ulcer
++ Gastric/Intestinal tumour	++ Gastric/Intestinal tumour
<b>Haematochezia</b>	
+++ Colitis/Proctitis	+++ Colitis/Proctitis
++ Tumours of the large intestine	++ Tumours of the large intestine
++ Perianal disease	++ Perianal disease

## Haemorrhagic Diarrhoea

+++ Viral gastroenteritis

## Melaena

### Gastric Haemorrhage

- Foreign body
- Gastric ulcer
  - Helicobacter sp.
  - Gastrospirilium sp.
  - NSAID/Glucocorticoids
  - Uraemia
  - Stress
  - Shock
  - Pancreatitis
  - Mast cell tumour [Dog]
  - Gastrinoma (Zollinger-Ellison Syndrome)
  - Acute Gastritis
  - Hypocortisolism (Addison's Disease) [Dog]
- Gastric tumours
  - Adenocarcinoma
  - Lymphosarcoma [esp Cat]
  - Fibrosarcoma
  - Leiomyoma/  
Leiomyosarcoma

### Haemorrhage of the Small Intestine

- Foreign body
- Duodenal tumours
  - Adenocarcinoma
  - Lymphosarcoma [esp Cat]
  - Fibrosarcoma
  - Leiomyoma/  
Leiomyosarcoma
- Invagination

- Duodenal ulcer
  - Helicobacter sp.
  - Gastrospirilium sp.
  - NSAID/Glucocorticoids
  - Uraemia
  - Stress
  - Shock
  - Pancreatitis
  - Mast cell tumour [Dog]
  - Gastrinoma (Zollinger-Ellison Syndrome)
  - Acute gastroenteritis

### Other Causes

- Raw meat diet
- Swallowed blood
  - epistaxis
  - respiratory haemorrhage
  - haemorrhage in the oral cavity
- Coagulopathy
- Shock

## Haematochezia

### Colonic Haemorrhage

- Foreign body
- Trauma
- Invagination
  - Ileocolon
  - Caecocolon
- Parasitic colitis
  - Trichuris sp. [Dog]
  - Ancylostoma sp.
  - Lymphoplasmacellular colitis

- Eosinophilic colitis
- Granulomatous colitis
- Ulcerative colitis [Dog]
- Colonic tumours
  - Adenocarcinoma
  - Lymphosarcoma [esp Cat]
  - Leiomyoma/  
Leiomyosarcoma
  - Polyp
- Food intolerance
  - Lack of crude fibre

### Anorectal Haemorrhage

- Foreign body
- Perianal wounds
- Anal gland abscess
- Perianal fistula [Dog]
- Perianal tumours [esp Dog]
- Rectal tumours

- Rectal adenocarcinoma
- Polyp

### Haemorrhagic Diarrhoea

#### Haemorrhagic Gastroenteritis

- Viral Gastroenteritis [Dog]
  - Parvovirus
  - Coronavirus
- Food intoxication/  
Enterotoxins
- Immunoreactive Causes
- Bacterial gastroenteritis
  - Clostridium sp. [esp Dog]
  - E. coli
  - Salmonella sp.
- Other Causes
  - DIC
  - Intestinal obstruction
  - Septicaemia

### Diagnostic Approach

*Faeces, bloody*

#### 1. Case History

#### 2. General Examination

#### 3. Pharyngeal Examination

#### 4. Rectal Examination

± Colonic smear/cytology

#### 5. Blood Tests

- Hct, Ery, Leuc, Hb
- TP, Alb, Glob
- GPT, AP, Urea, Crea
- Amylase, Lipase

#### **COAGULOPATHY**

- Bleeding time

- Prothrombin time (PT/Quick)
- (Activated) partial Thromboplastin time (PTT/  
aPTT)
- Fibrin degradation products (FDP)
- Thrombocyte number

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Helicobacter Antibodies

#### 6. Faecal Examination

- Plain examination
- Flotation

- Parvovirus Antigen [Dog]
- Bacterial culture

### 7. Urinalysis

- Urine dip stick
- Specific gravity
- Urine sediment

### 8. X-Ray Study

- Abdomen

### 9. Ultrasound

- Abdomen ± biopsy

### 10. Endoscopy

- Gastro-/Duodenoscopy  
± biopsy
- Colonoscopy ± biopsy

### 11. Further Tests

- Laparotomy

## Rectal Tenesmus

Frequent and painful evacuation of faecal matter in small amounts

### Common Causes

Dog	Cat
+++ Colitis	+++ Colitis
++ Constipation	++ Constipation
++ Anal gland abscess	++ Anal gland abscess
++ Prostatic hyperplasia	++ Colorectal tumours
+ Perineal hernia	
+ Colorectal tumours	

## Obstructive Causes

### Intraluminal Intestinal Obstruction

- Perineal hernia [Dog]
- Colorectal tumours
  - Adenocarcinoma
  - Lymphosarcoma [esp Cat]
  - Leiomyoma/  
Leiomyosarcoma
  - Polyp
- Invagination
  - Ileocolon
  - Caecocolon
- Rectal diverticulum

- Anal stricture
- Atresia ani
- Faecal clumping around the anus
- Rectal prolapse

### Extraluminal Intestinal Obstruction

- Prostatic enlargement [Dog]
  - Prostatic hyperplasia
  - Prostatitis/Prostatic abscess
  - Prostatic cysts
  - Paraprostatic cyst
  - Prostatic carcinoma

- Pelvic fractures
- Pathological pregnancy

## Other Causes

### Colitis/Proctitis

- Food Intolerance
  - Lack of crude fibre
  - Food allergy
- Bacterial colitis
  - Dysbacteriosis/bacterial overgrowth
  - *Salmonella* sp.
  - *Campylobacter* sp.
  - *Clostridium* sp.
- Parasitic colitis
  - *Trichuris* sp. [Dog]
  - *Ancylostoma* sp.
  - *Uncinaria* sp.
  - *Balantidium* sp. [Dog]
  - *Cystoisospora* sp.
  - (*Entamoeba* sp. [Dog])
- Immunoreactive colitis  
(Inflammatory bowel disease)
  - Lymphoplasmacellular colitis
  - Eosinophilic colitis
  - Granulomatous colitis
  - Ulcerative colitis
- Psychogenic colitis
  - Irritable colon
- Partial colonic obstruction

- Foreign body
- Intestinal tumour
- Invagination
- Rectal diverticulum
- Viral colitis
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
- Mycotic colitis
  - (*Histoplasma* sp.)

### Perianal Disease

- Anal sac abscess
- Perianal fistula [Dog]
- Perineal hernia [Dog]
- Perianal wounds
- Perianal tumours
  - Rectal carcinoma
  - Rectal polyp
  - Anal gland adenoma/carcinoma
  - Anal sac adenoma/carcinoma
  - Hepatoid gland adenoma/carcinoma [Dog]

### Further Causes

- Constipation (esp feeding of bones)
- Urinary Tract Disease

## Diagnostic Approach

### *Rectal Tenesmus*

- 1. Case History**
- 2. General Examination**

- 3. Rectal Examination**

- ± Colonic smear/cytology  
± Sticky tape impression

**4. X-Ray Study**

- Abdomen
- Pelvis
- Contrast enema
- Intestinal contrast medium passage

**5. Blood Tests**

- Hct, Ery, Leuc

**MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]

**6. Urinalysis**

- Urine dip stick

- Specific gravity
- Urine sediment

**7. Faecal Examination**

- Plain examination
- Flotation
- Bacterial culture

**8. Ultrasound**

- Abdomen

**9. Endoscopy**

- Coloscopy ± biopsy

## Faecal Incontinence

Involuntary defaecation as a result of primary or secondary sphincter incompetence

**Common Causes**

Dog	Cat
+++ Intervertebral disc prolapse	+++ Pelvic fractures
++ Cauda equina syndrome	++ Spinal trauma
++ Pelvic fractures	++ Perianal Disease
++ Perianal Disease	

### Neurological Causes

**Lumbosacral Spinal Cord Lesion (L4–S3)**

- Traumatic Causes
  - Disc prolapse
  - Vertebral fracture/luxation
  - Haemorrhage/Haematoma
  - Fibrocartilaginous embolism
  - Thromboembolism

- Congenital causes
  - Deformed spinal column (ie hemivertebra/wedge shaped vertebra)
  - Meningocele
- Infectious Causes
  - Discospondylitis/ Osteomyelitis
  - Abscess
  - Myelitis

- Immunoreactive Causes
  - Granulomatous Meningoencephalomyelitis
- Degenerative Causes
  - Spondylosis deformans
  - Disc prolapse
  - Lumbosacral stenosis (Cauda equina syndrome) [Dog]
  - (Dura mater ossification)
- Tumours/Tumour metastasis
  - Osteosarcoma
  - Chondrosarcoma
  - Multiple Myeloma [esp Dog]
- Other Causes
  - Hypervitaminosis A [Cat]
- Toxic Causes
  - Organophosphate poisoning (chronic)
  - Lead poisoning
  - Cytostatics
  - Lindane
  - Botulism toxin
  - Tick toxin (Tick paralysis)
- Congenital Causes
  - Axonopathy
  - Demyelinisation diseases
  - Lysosomal storage disease
  - Spinal muscular atrophy
- Other causes
  - Nerve root compression syndrome
  - (Feline dysautonomia [Cat])
  - Polyneuritis/ Polyradiculoneuritis [Dog]

## **Peripheral Nerve Lesion**

- Pudendal nerve lesion
  - Perianal surgery
  - Tumours
  - Pelvic fractures

## **Polyneuropathy**

- Infectious Causes
  - FeLV-/FIV [Cat]
  - Toxoplasma sp.
  - Neospora sp. [Dog]
- Immunoreactive Causes
  - Lupus erythematosus
- Metabolic Causes
  - Diabetes mellitus
  - Hypercortisolism (Cushing's Disease) [esp Dog]
  - Hypothyroidism [Dog]

- Perianal Disease
  - Anal sac abscess
  - Perianal fistula [Dog]
  - Perianal tumours
  - Perineal hernia [Dog]
  - Perianal wounds
- Acute Diarrhoea
- Psychogenic Causes
  - Fear/Excitement
  - Senility
  - Irritable colon
- Constipation
- Urinary Tract Disease

## Diagnostic Approach

### *Faecal Incontinence*

#### 1. Case History

#### 2. General Examination (incl. rectal)

#### 3. Neurological Examination

- Awareness/behaviour
- Body/Limb posture
- Locomotion
- Muscle tone/strength
- Spinal reflexes
  - Bicipital reflex (C6–C8)
  - Tricipital reflex (C7–T1)
  - Patellar reflex (L4–L6)
  - Withdrawal reflex (C6–T1 and L6–S1)
  - Cutaneous trunci reflex (C7–T1)
  - Anal sphincter reflex (S1–S3)
  - Urinary bladder – can it be expressed?

#### 4. X-Ray Study

- Abdomen
- Pelvis
- Lumbar Spine
  - ± Myelography

#### 5. Blood Tests

- Hct, Ery, Leuc

- Na, K, Ca
- CK
- Urea, Creatinine
- Diff BC

### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]

#### 6. Urinalysis

- Urinary output/volume
- Urine dip stick
- Specific gravity
- Urine sediment
  - Bacteria
  - Erythrocytes, leucocytes
  - Epithelial cells
  - Casts
  - Crystals
  - Tumour cytology
- Bacterial culture (Cystocentesis)

#### 7. Faecal Examination

- Plain examination
- Flotation
- Bacterial culture

#### 8. Further Tests

- Colonoscopy ± biopsy
- Spinal tap/analysis

## Meteorism/Flatulence

**Gastric/Intestinal flatulence:** Increased intestinal gas content with/without flatulence (wind), with/without borborygmi (rolling/gurgling intestinal sounds)

<b>Common Causes</b>	
Dog	Cat
+++ Bloating food	+++ Milk in absence of lactase
++ Malabsorption syndrome	++ Malabsorption syndrome
++ Maldigestion syndrome	++ Maldigestion syndrome
++ Motility disturbance	++ Motility disturbance

## Aerophagia

- Rushed food intake
  - Food jealousy
- Hypersalivation

## ↑ Intestinal Gas formation

### Bloating Food

- Soya beans
- Cabbage
- Spoilt food
- Milk in lactase deficiency

### Malabsorption Syndrome

- Viral enteritis
  - Parvovirus
  - Rota-/Coronavirus
  - FeLV/FIV [Cat]
  - Canine distemper virus [Dog]
- Bacterial enteritis
  - Salmonella sp.
  - Campylobacter sp.
  - Yersinia sp.
  - Shigella sp.
  - E. coli
  - Clostridium sp.
  - Helicobacter sp.
  - Dysbacteriosis
- Parasitic enteritis

## Protozoa

- Giardia sp.
- Toxoplasma sp.
- Cystoisospora sp.
- Cryptosporidium sp.
- (*Entamoeba* sp. [Dog])

## Roundworms

- *Toxocara* spp.
- *Toxascaris* sp.
- *Ancylostoma* sp.
- *Uncinaria* sp.
- *Trichuris* sp. [Dog]
- *Strongyloides* sp.
- (*Spirocercus* sp. [Dog])

## Tapeworms

- *Dipylidium* sp.
- *Joyeuxiella* sp.
- *Diphyllobothrium* sp. [Dog]
- *Spirometra* sp. [Dog]
- *Echinococcus* sp.
- *Taenia* spp.
- *Mesocestoides* sp.
- Immunoreactive enteritis  
(Inflammatory bowel disease)
  - Lymphoplasmacellular enteritis
  - Eosinophilic enteritis
  - Granulomatous enteritis

- Mycotic enteritis
  - (*Candida* sp.)
  - (*Histoplasma* sp.)
  - (*Aspergillus* sp.)

## Maldigestion Syndrome

- Exocrine pancreatic insufficiency
- Bile acid deficiency

## Motility Disturbances

### **Mechanical Ileus (Intestinal Obstruction) Intraluminal intestinal obstruction**

- Foreign body
- Invagination
- Intestinal parasites
  - Roundworms
  - Tapeworms
- Intestinal tumours
  - Adenocarcinoma
  - Lymphosarcoma
  - Leiomyoma/  
Leiomyosarcoma
  - Fibrosarcoma
  - Polyp

### **Extraluminal intestinal obstruction**

- Abdominal tumours
- Incarceration (hernia)
- Volvulus
- Pelvic fractures
- Pathological pregnancy
- Lymphadenopathy
- Adhesions

### **Paralytic Ileus (Intestinal atony)**

- Mechanical Ileus (advanced stage)
- Abdominal trauma
- Peritonitis
- Spinal cord disease
- Shock
- Acute pancreatitis
- Uraemia
- Hypokalaemia
- Diabetic ketoacidosis
- Intestinal tumours
- Gastroenteritis
- Idiopathic megacolon
- Organ failure
  - Congestive heart failure
  - Liver failure
  - Kidney failure
- Hepatoencephalopathy
- Feline dysautonomia [Cat]
- Polyneuropathy
- Mesenteric infarction
- Hypothyroidism [Dog]
- Postoperative intestinal paralysis
- Drugs
  - Atropine
  - Butylscopolamine
  - Laxative misuse
- Heavy metal poisoning
  - Lead
  - Thallium

## Diagnostic Approach

### *Meteorism*

#### 1. Case History

#### 2. General Examination

#### 3. X-Ray Study

- Abdomen
- Intestinal contrast medium passage
- Contrast enema

#### 4. Blood Tests

- Hct, Ery, Leuc
- Na, K, Ca
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- Amylase, Lipase [Dog]
- TLI Test
- Cholesterol
- Serum Cobalamin (Vit. B12)
- Serum Folic acid
- Serum bile acids
- Serum Gastrin
- Diff BC
- FIP Profile [Cat]
  - TP
  - Alb/Glob Ratio
  - Bili
  - GOT
  - Serum electrophoresis

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]

#### **FUNCTION TESTS**

- $T_4$ , f $T_4$
- TSH-/TRH Stimulation Test [Dog]
- PABA-Xylose Test [Dog]

#### 5. Urinalysis

- Urine dip stick
- Specific gravity
- Urine sediment

#### 6. Faecal Examination

- Plain examination
- Flotation
- Bacterial culture
- Fat content (Sudan staining)
- Chymotrypsin

#### 7. Ultrasound

- Abdomen ± biopsy

#### 8. Endoscopy

- Gastro-/Duodenoscopy ± biopsy
- Colonoscopy ± biopsy

#### 9. Further Tests

- Colonic smear/cytology

## Halitosis

Unpleasant odour noticeable on the breath, foetor ex oris

<b>Common Causes</b>	
Dog	Cat
+++ Dental Disease	+++ Dental Disease
++ Food retention	++ Food retention
++ Uraemia	++ Uraemia
++ Diabetic ketoacidosis	++ Diabetic ketoacidosis
++ Tumour in the oral cavity	++ Tumour in the oral cavity

## Oropharyngeal Causes

### Stomatitis/Gingivitis/Glossitis/ Tonsillitis

- Viral Causes
  - FeLV/FIV [Cat]
  - Feline Calici virus [Cat]
  - Feline Herpes virus [Cat]
- Bacterial Causes
  - Streptococcus sp.
  - Staphylococcus sp.
  - Neisseria sp.
  - E. coli
  - Pasteurella sp.
  - Acinetobacter sp.
  - Leptospira sp. [Dog]
  - Actinomyces sp.
  - Nocardia sp.
  - Mycobacterium sp. [Dog]
  - Fusobacterium sp.
  - Spirochetes
- Immunoreactive causes
  - Eosinophilic granuloma
  - Plasmacell gingivitis/  
stomatitis
  - Lupus erythematosus
  - Pemphigus vulgaris
- Metabolic Causes
  - Uraemia
  - Hypothyroidism [Dog]

### – Diabetes mellitus

- Toxic Causes
  - Lead Poisoning
  - Household agents
  - Poisonous plants
  - Cytostatics
  - Chemical burns
- Other causes
  - Foreign body/abscess
- Mycotic Causes
  - Candida sp.

## Dental Disease

- Dental fracture
- Dental abscess
- Dental calculus/decay
- Feline odontoclastic resorptive  
lesions (FORL) [Cat]
- Periodontitis
- Persistent deciduous teeth
- Dental malposition/food  
retention
- Root remnants (broken teeth)

## Oropharyngeal tumours

- Papilloma
- Fibroma/Fibrosarcoma
- Squamous cell carcinoma
- Melanoma

- Epulis/Gingival hyperplasia [esp Dog]
- Tonsillar carcinoma
- Lymphoma/Lymphosarcoma
- Mast cell tumour
- Salivary gland carcinoma
- Nasopharyngeal polyps [Cat]

## Salivary Gland Disease

*Gl. parotis*

*Gl. zygomatica*

*Gl. mandibularis*

*Gl. sublingualis*

- Sialoadenitis
- Sialocele/Mucocele/Ranula
- Salivary gland adenoma/carcinoma
- Sialolithiasis

## Oronasal fistula

- Dental abscess
- Foreign body

- Cleft palate (congenital/traumatic)

## Other Causes

- Lip anomalies [esp Dog]

## Other Causes

## Gastrointestinal Causes

- Coprophagia
- Megaoesophagus
- Gastric tumours
- Gastritis

## Metabolic Causes

- Uraemia
- Diabetic ketoacidosis

## Respiratory Causes

- Rhinitis/Sinusitis
- Bronchopneumonia

## Diagnostic Approach

### Halitosis

#### 1. Case History

#### 2. General Examination

#### 3. Examination of the Oral Cavity and Pharynx

#### 4. Blood Tests

- Hct, Ery, Leuc
- Urea, Crea, BG

#### 5. X-Ray Study

- Skull (+ Tympanic bulla)
- Throat
- Thorax

#### 6. Endoscopy

- Rhinoscopy ± Biopsy
- Gastroscopy ± Biopsy
- Bronchoscopy ± Tracheobronchial lavage

# Constipation

**Coprostasis:** Accumulation of faecal matter in the colon

<b>Common Causes</b>	
Dog	Cat
+++ Feeding of bones	+++ Pelvic fractures (healed)
++ Pelvic fractures (healed)	++ Colorectal tumours
++ Colorectal tumours	++ Idiopathic megacolon
++ Perineal hernia	++ Hypokalaemia
++ Lumbosacral spinal cord lesion	++ Feline dysautonomia

## Painful defaecation

### Bone Diseases

- Spinal disease
- Hip joint disease
- Disease of the hind limbs
- Pelvic fractures

### Perianal Disease

- Anal sac abscess
- Perianal fistula [Dog]
- Perineal hernia [Dog]
- Perianal wounds
- Perianal tumours
  - Rectal carcinoma
  - Rectal polyp
  - Anal sac adenoma/ carcinoma
  - Anal gland adenoma/ carcinoma
  - Hepatoid adenoma/ carcinoma [Dog]

## Obstructive Causes

### Intraluminal Intestinal Obstruction

- Perineal hernia [Dog]
- Colorectal tumours
  - Adenocarcinoma
  - Lymphosarcoma [esp Cat]
  - Leiomyoma/ Leiomyosarcoma
  - Polyp
- Rectal diverticulum
- Anal stricture
- Atresia ani
- Faecal clumping around the anus
- Rectal prolapse

### Extraluminal Intestinal Obstruction

- Pelvic fractures (healed)
- Prostatic enlargement [Dog]
  - Prostatic hyperplasia

- Prostatitis/prostatic abscess
- Prostatic cysts
- Paraprostatic cyst
- Prostatic carcinoma
- Pelvic tumours
- Lymphadenopathy
  - Lnn. sublumbales
- Pathological pregnancy
- Condition after
  - Tripleosteotomy (pelvic narrowing)
- Disc prolapse
- Lumbosacral stenosis (Cauda equina syndrome) [Dog]
- (Dura mater ossification)
- Tumours
  - Osteosarcoma
  - Chondrosarcoma
  - Multiple myeloma [esp Dog]
  - Lymphosarcoma
  - Meningeoma
  - Tumour metastasis
- Other Causes
  - Hypervitaminosis A [Cat]

## Neurological Causes

### Lumbosacral Spinal Cord Lesion (L4–S3)

- Traumatic Causes
  - Disc prolapse
  - Vertebral fracture/luxation
  - Haemorrhage/Haematoma
  - Fibrocartilaginous embolism
  - Thromboembolism
- Congenital Causes
  - Lumbosacral stenosis (Cauda equina syndrome) [Dog]
  - Deformed spinal column (ie hemivertebra/wedge shaped vertebra)
  - Meningocele
- Infectious Causes
  - Discospondylitis/ Osteomyelitis
  - Abscess
  - Myelitis
- Immunoreactive Causes
  - Granulomatous meningoencephalomyelitis
- Degenerative Causes
  - Spondylosis deformans

### Peripheral Nerve Lesion

- Pelvic nerve

### Polyneuropathy

- Infectious Polyneuropathy/ Polyneuritis
  - FeLV/FIV [Cat]
  - Neospora sp. [Dog]
  - Toxoplasma sp.
- Immunoreactive Polyneuropathy
  - Lupus erythematosus
  - Myasthenia gravis
- Endocrine polyneuropathy
  - Hypercortisolism (Cushing's Disease) [Dog]
  - Hypothyroidism [Dog]
  - Diabetes mellitus
  - Hypoglycaemia (Insulinoma)
- Toxic polyneuropathy
- Feline dysautonomia [Cat]

## Other Causes

### Constipating Foods

- Bones
- Dry food in combination with insufficient water intake
- Cocoa
- Bananas
- Nutmeg

### Drugs

- Butylscopolamine
- Atropine
- Loperamide
- Diuretics
- Sucralfate
- Antihistamines
- Iron preparations
- Calcium channel blockers
- Barium sulfate
- Antacids (Aluminium hydroxide)
- Diphenoxylate

## Poisoning

- Rodenticides (Cholecalciferol)
- Heavy metals
  - Lead
  - Copper
  - Thallium

## Metabolic Causes

- Dehydration
- Hypothyroidism [Dog]
- Hypokalaemia
- Hypercalcaemia

## Other Causes

- Lack of exercise
- Environmental disturbance affecting defaecation
  - Unhygienic cat litter
- Congenital megacolon (Hirschsprung Disease)

## Diagnostic Approach

### *Constipation*

#### 1. Case History

#### 2. General Examination

#### 3. Neurological Examination

- Spinal Reflexes
  - Bicipital reflex (C6–C8)
  - Triceps reflex (C7–T1)
  - Patellar reflex (L4–L6)
  - Withdrawal reflex (C6–T1 and L6–S1)

- Cutaneous trunci reflex (C7–T1)
- Anal sphincter reflex (S1–S3)
- Urinary bladder – can it be expressed?

#### 4. X-Ray Study

- Abdomen
- Pelvis
- Intestinal contrast medium passage (after colonic evacuation)

- Contrast enema (after colonic elimination)

### **5. Blood Tests**

- Hct, Ery, Leuc
- Na, K, Ca
- TP
- GPT, AP, Urea, Crea
- Diff BC
- Cholesterol [Dog]

### **6. Urinalysis**

- Urine dip stick
- Specific gravity
- Urine sediment

### **7. Ultrasound**

- Abdomen

### **8. Endoscopy**

- Colonoscopy ± biopsy

### **9. Further Examination**

- Laparotomy

## Polyphagia

Pathological increase of appetite

### Common Causes

Dog	Cat
+++ Over supply	+++ Hyperthyroidism
++ Food jealousy	++ Diabetes mellitus
++ Glucocorticoid therapy	++ Glucocorticoid therapy
++ Hypercortisolism (Cushing's Disease)	++ Malabsorption syndrome
++ Diabetes mellitus	++ Maldigestion syndrome
++ Malabsorption syndrome	
++ Maldigestion syndrome	

### With Weight Gain

#### Physiological Causes

- Lack of exercise
- Over supply

#### Endocrine Causes

- Hypothalamic dysfunction
- Hypercortisolism (Cushing's Disease)

- Hyperinsulinism/Insulinoma
- Hypogonadism/castration

#### Drugs

- Glucocorticoid long term therapy
- Anabolic steroids
- Anticonvulsants
- $\beta$  Blockers [Dog]

## With Weight Loss

### Physiological Causes

- Lactation
- Exposure to the cold
- Exercise
- Caloric Malnutrition

### Endocrine Causes

- Hyperthyroidism
- Diabetes mellitus

### Malabsorption Syndrome

- Viral Enteritis
  - Parvovirus
  - Rota-/Coronavirus
  - FeLV/FIV [Cat]
  - Canine Distemper Virus [Dog]
- Bacterial Enteritis
  - *Salmonella* sp.
  - *Campylobacter* sp.
  - *Yersinia* sp.
  - *Shigella* sp.
  - *E. coli*
  - *Clostridium* sp.
  - *Helicobacter* sp.
  - Dysbacteriosis (Antibiosis)
- Parasitic Enteritis

### Protozoa

- *Giardia* sp.
- *Toxoplasma* sp.
- *Cystoisospora* sp.
- *Cryptosporidium* sp.
- (*Entamoeba* sp. [Dog])

### Roundworms

- *Toxocara* spp.
- *Toxascaris* sp.
- *Ancylostoma* sp.
- *Uncinaria* sp.

- *Trichuris* sp. [Dog]
- *Strongyloides* sp.
- (*Spirocercus* sp. [Dog])

### Tapeworms

- *Dipylidium* sp.
- *Joyeuxiella* sp.
- *Diphyllobothrium* sp. [Dog]
- *Spirometra* sp. [Dog]
- *Echinococcus* sp.
- *Taenia* spp.
- *Mesocestoides* sp.

### Food Intolerance

- Lactose
- Gluten [Dog]
- Food allergy

### Immunoreactive Enteritis (Inflammatory bowel disease)

- Lymphoplasmacellular enteritis
- Eosinophilic enteritis
- Granulomatous enteritis

### Intestinal tumours

- Lymphosarcoma [esp Cat]
- Adenocarcinoma
- Fibrosarcoma
- Leiomyoma/Leiomyosarcoma
- Undifferentiated sarcoma
- Gastrinoma (Zollinger-Ellison Syndrome)

### Duodenal ulcer

- Toxic Enteritis
  - Enterotoxins
  - Drugs
  - Poisoning

### Lymphangiectasia [Dog]

- Mycotic Enteritis
  - *Candida* sp.
  - *Aspergillus* sp.
  - (*Histoplasma* sp.)

## **Maldigestion Syndrome**

- Exocrine pancreatic insufficiency
- Bile acid deficiency

## **Other Causes**

- Hypoalbuminaemia
  - Protein-losing enteropathy
  - Protein-losing nephropathy

- Portosystemic shunt
- Liver cirrhosis
- Cachexia
- Burns
- Exsudative body cavity effusions
- Chronic haemorrhage

- Hypothalamic tumour
- Feline lymphocytic cholangitis [Cat]

## **Diagnostic Approach**

### *Polyphagia*

#### 1. Case History

#### 2. General Examination

#### 3. Oral Cavity/ Pharyngeal Examination

#### 4. Blood Tests

- Hct, Ery, Leuc, Hb
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- Amylase, Lipase
- TLI Test
- Bile acids
- Ammonium
- Diff BC
- Na, K, Ca, P
- FIP Profile [Cat]
  - TP
  - Alb-/Glob Ratio
  - Bili
  - GOT
  - Serum electrophoresis
- Vit. B<sub>12</sub>

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]

#### **FUNCTION TESTS**

- T<sub>4</sub>, fT<sub>4</sub>
- T<sub>3</sub> Suppression Test [Cat]
- Adrenal gland function test [Dog]
  - Dexamethasone Suppression test
  - ACTH Stimulation test
  - Cortisol/Creatinine Ratio

#### 5. Urinalysis

- Urine dip stick
- Specific gravity
- Urine sediment

#### 6. Faecal Examination

- Plain examination
- Flotation
- Chymotrypsin
- Elastase

#### 7. X-Ray Study

- Skull

- Abdomen
- Thorax

## 8. Ultrasound

- Abdomen ± Liver biopsy
- Heart (Doppler  
Echocardiography)

## 9. Endoscopy

- Gastro-/Duodenoscopy  
± Biopsy

## 10. Further Tests

- Analysis of body cavity fluid
- Spinal tap/analysis

# Regurgitation

Retrograde oesophageal evacuation/retching of undigested food

## Common Causes

Dog	Cat
+++ Idiopathic megaoesophagus	+++ Idiopathic megaoesophagus
++ Myasthenia gravis	++ Myasthenia gravis
++ Persistent right aortic arch	+ Feline dysautonomia
++ Oesophageal foreign body	
++ Hypothyroidism	
++ Hypocortisolism (Addison's Disease)	

# Oesophageal Diseases

## Megaoesophagus (Motility Disorders)

- Congenital malformation
- Idiopathic megaoesophagus
- Myasthenia gravis
- Feline dysautonomia [Cat]
- Chronic oesophagitis
- Chronic oesophageal stenosis
- Hypothyroidism [Dog]
- Hypocortisolism (Addison's Disease) [Dog]
- Lupus erythematosus
- Botulism
- Tetanus

- Canine distemper virus [Dog]
- Brain stem disease
- Bilateral vagal lesion
- Dermatomyositis [Dog]
- Glycogen storage disease
- Thymoma
- Lead poisoning
- Thallium poisoning
- Organophosphate poisoning (chronic)
- (*Trypanosoma cruzi* [Dog])

## Oesophageal Stenosis

- Oesophageal foreign body
- Hiatus hernia
- Gastric dilation/volvulus [Dog]

- Persistent right aortic arch
- Oesophageal tumours
- Mediastinal tumours
- Oesophageal stricture
- Oesophageal diverticulum
- (Spirocercus granulomata [Dog])

## Oesophagitis

- Reflux oesophagitis [esp Dog]
- Chronic vomitus
- Foreign body oesophagitis
- (Spirocercus granulomata [Dog])

## Diagnostic Approach

### *Regurgitation*

#### **1. Case History**

#### **2. General Examination**

#### **3. Vomitus Analysis**

- Food – digestive stage
- pH
- Bile

#### **4. Pharyngeal Examination**

#### **5. X-Ray Study**

- Throat
- Thorax
- Contrast oesophagogram/  
Fluoroscopy

#### **6. Blood Tests**

- Hct, Ery, Leuc, Hb
- Na, K, Ca, P
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- Diff BC
- Chol, CK

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV-Antigen [Cat]

#### **IMMUNOSEROLOGY**

- Autoantibodies against

Acetylcholine receptors  
(Myasthenia gravis detection)

- ANA Test

#### **FUNCTION TESTS**

- Adrenal gland function tests  
[Dog]
  - Dexamethasone Suppression test
  - ACTH Stimulation test
  - Cortisol/Creatinine Ratio
- T<sub>4</sub>, fT<sub>4</sub>
- TSH-/TRH Stimulation test  
[Dog]

#### **FURTHER TESTS**

- Prostigmin®-/Tensilon® Test  
(Myasthenia gravis detection)

#### **7. Endoscopy**

- Oesophago-/Gastroscopy  
± Biopsy

#### **8. Further Tests**

- Canine distemper virus antigen  
[Dog] (Conjunctival smear)
- Muscle biopsy

# 5 Urological Principal Symptoms

Urine, Bloody .....	143
Urinary Urgency .....	147
Urinary Incontinence and Retention .....	150
Urinary Tract Infections, Chronic Recurrent.....	153
Oliguria/Anuria.....	154
Polydipsia/Polyuria.....	157
Renomegaly .....	160

## Urine, Bloody

**Haematuria:** Excretion of blood in the urine

**Haemoglobinuria:** Excretion of haemoglobin in the urine

**Myoglobinuria:** Excretion of myoglobin in the urine

Common Causes	
Dog	Cat
+++ Cystitis/Urethritis	+++ Cystitis/Urethritis
++ Prostatic disease	++ FUS/FLUTD
++ Hypersexuality (male)	++ Urolithiasis
++ Urolithiasis	++ Urinary tract tumours
++ Urinary tract tumours	++ Trauma
++ Trauma	++ Coagulopathy
++ Coagulopathies	

### Renal Haemorrhage

- Trauma
- Pyelonephritis
  - E. coli
  - Staphylococcus sp.

- Streptococcus sp.
- Proteus sp.
- Klebsiella sp.
- Enterobacter sp.
- Pseudomonas sp.
- (Dioctophyma sp.)

- Nephrolithiasis
  - Struvite
  - Ca Carbonate
  - Ca Phosphate
  - Oxalate
  - Cystine
  - Urate
- Renal tumours
  - Lymphosarcoma
  - Renal carcinoma
  - Nephroblastoma
  - Cystadenocarcinoma
- Renal cysts

## Ureteral/Bladder/ Urethral Haemorrhage

- Trauma
- Cystitis/Urethritis
  - E. coli
  - Staphylococcus sp.
  - Streptococcus sp.
  - Proteus sp.
  - Klebsiella sp.
  - Enterobacter sp.
  - Pseudomonas sp.
  - Candida sp.
  - Capillaria sp.
  - Cytostatics
- Urolithiasis
  - Struvite
  - Ca Carbonate
  - Ca Phosphate
  - Oxalate
  - Cystine
  - Urate
- Urinary tract tumour
  - Transitional cell carcinoma
  - Leiomyoma
  - Fibroma/Fibrosarcoma
  - Rhabdomyosarcoma

- Squamous cell carcinoma
- Canine transmissible venereal tumour
- Polyp
- Papilloma

- FUS/FLUTD [Cat]

## Haemorrhage of the Genital Tract

### Prostatic Haemorrhage

- Trauma
- Prostatic hyperplasia
- Prostatitis/Prostatic abscess
- Prostatic cysts
- Prostatic carcinoma

### Uterine Haemorrhage

- Trauma
- Proestrus
- Postpartal placental abruption

### Vaginal /Penile haemorrhage

- Trauma
- Hypersexuality (haemorrhage of the erectile tissue) [Dog]
- Canine transmissible venereal tumour

## Coagulopathies

### Thrombocytopenia

- Bone marrow damage
  - Infectious Causes
  - Toxic Causes
  - Immunoreactive Causes
  - Bone marrow tumours
- DIC
  - Septicaemia/Endotoxaemia

- Gastric dilation/volvulus [Dog]
- Pyometra
- Urinary tract infection
- Haemorrhagic enteritis
- Splenic torsion [esp Dog]
- Acute pancreatitis
- Shock
- Heart failure
- Liver failure
- Haemolysis
- Snake venom
- Heat stroke
- Electrical shock
- Burns
- FIP Coronavirus [Cat]
- Tumour disease
- (Dirofilaria sp.  
[esp Dog])
- Immune thrombocytopenia
  - Infection
  - Drugs
  - Lupus erythematosus
- Infectious Thrombocytopenia
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
  - Parvovirus
  - Canine distemper virus [Dog]
  - CAV-1 (Hepatitis c. c.) [Dog]
  - Canine Herpes virus [Dog]
  - Leptospira sp. [Dog]
  - Salmonella sp.
  - Haemobartonella sp. [Cat]
  - Babesia sp. [esp Dog]
  - (Ehrlichia sp. [Dog])
  - (Histoplasma sp.)
- Splenomegaly
- Chronic haemorrhage
- Thrombosis

## **Thrombocytopathy**

- Acquired Thrombocytopenia
  - Drugs
  - Uraemia
  - Liver failure
  - Acute pancreatitis
  - Bone tumours
  - Hyperviscosity syndrome
- Congenital thrombocytopathy
  - Von Willebrand Disease [esp Dog]
  - Chediak-Higashi Syndrome [Cat]
  - Thrombasthenia (Glanzmann) [Dog]
  - Platelet aggregation defect
  - Cyclic neutropenia [Grey Collie]

## **Plasmatic Coagulopathy**

- Congenital Coagulopathy
  - Factor VIII deficiency (Haemophilia A)
  - Factor IX deficiency (Haemophilia B)
  - Von Willebrand Disease [esp Dog]
  - Factor VII deficiency [Dog]
  - Factor X Deficiency [Dog]
  - Factor XI deficiency [Dog]
  - Factor XII deficiency (Hagemann) [Cat]
  - Vitamin K dependent coagulopathy [Cat]
- Vitamin K deficiency/antagonism

- Liver failure
- Malabsorption syndrome
- Obstructive icterus
- Damage of the intestinal flora (Antibiotics)
- Dicoumarol poisoning (Rodenticides)
- DIC

## Haemoglobinuria

### Haemolysis

- Viral haemolysis
  - FeLV/FIV [Cat]
- Bacterial haemolysis
  - Leptospira sp. [Dog]
- Parasitic haemolysis
  - Babesia sp. [Dog]
  - Haemobartonella sp. [Cat]
  - (Ehrlichia sp. [Dog])
  - (Hepatozoon sp. [Dog])
  - (Dirofilaria sp. [esp Dog])
  - (Cyttauxzoon sp. [Cat])
- Immunoreactive Haemolysis
  - Neonatal isoerythrolysis [Cat]
  - Blood transfusion incompatibility
  - Autoimmune haemolysis
  - Drug allergy
- Toxic Causes
  - Phenacetin
  - Propylene glycol
  - Antiarrhythmics
  - Anticonvulsants
  - Cimetidine
  - Levamisole
  - Metronidazole
  - Griseofulvin

- Phenothiazide
- Methylene blue
- Vitamin K
- Benzocaine
- Methionine
- Dimethyl sulfoxide
- Zinc
- Cytostatics
- Paracetamol
- Onions/Garlic/Broccoli
- Snake venom
- Water enema [Cat]
- Heavy metal poisoning
- Toxic plants (esp Dieffenbachia sp.)
- Metabolic Causes
  - Hypophosphataemia
  - Pyruvate kinase deficiency [Dog]
  - Phosphofructokinase deficiency
  - Copper storage disease [Dog]
  - Feline porphyria [Cat]
- Other causes
  - Heat stroke
  - Electrical accident
  - Extreme performance
  - DIC
  - Vasculitis
  - Haemangiosarcoma

## Myoglobinuria

### Rhabdomyolysis

- Muscle trauma
- Lactacidosis (aching muscles)
- Seizures
- Myositis
  - Toxoplasma sp.
  - Neospora sp. [Dog]

- Eosinophilic myositis  
[esp Dog]
- Dermatomyositis [Dog]
- (Ehrlichia sp. [Dog])

## Diagnostic Approach

*Urine, bloody*

### 1. Case History

### 2. General Examination

### 3. Blood Tests

- Hct, Ery, Leuc
- TP
- Na, K, Ca
- Urea, Crea
- Diff BC

### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]

### **COAGULATION**

- Thrombocyte number
- Prothrombin time (PT/Quick)
- (Activated) partial Thromboplastin time (PTT/aPTT)
- Fibrin degradation product (FDP)
- Bleeding time

### 4. Urinalysis

- Urinary output/volume
- Urine dipstick
- Specific gravity

- Urine sediment
  - Bacteria
  - Erys, Leuc
  - Epithelial cells
  - Casts
  - Crystals
  - Tumour cytology
- Bacterial culture  
(Cystocentesis)

### 5. X-Ray Study

- Abdomen
- Pelvis
- Contrast urethrography
- Contrast-/double contrast urography
- Excretory urography

### 6. Ultrasound

- Abdomen ± Biopsy

### 7. Further Tests

- Vaginoscopy
- Laparotomy

## Urinary Urgency

**Dysuria, Stranguria, Tenesmus vesicae:** Painful urination disorder

**Pollakiuria:** Frequent urination of small amounts

<b>Common Causes</b>	
Dog	Cat
+++ Cystitis/Urethritis	+++ Cystitis/Urethritis
++ Prostatic enlargement	++ FUS/FLUTD
++ Urolithiasis	++ Bladder tumours
++ Reflex dyssynergia	++ Pelvic fractures
++ Bladder tumours	
+ Pelvic fractures	

## Obstructive Causes

### Urolithiasis

#### pH alkaline

- Struvite
- Ca Carbonate
- Ca Phosphate
- Ammonium urate

#### pH acidic

- Oxalate
- Cystine
- Urate

### Prostatic enlargement

- Prostatitis/Prostatic abscess
- Prostatic hyperplasia
- Prostatic cysts
- Paraprostatic cyst
- Prostatic carcinoma

### Urinary Tract Tumours

- Transitional cell carcinoma
- Leiomyoma
- Fibroma/Fibrosarcoma
- Squamous cell carcinoma
- Canine transmissible venereal tumour [Dog]
- Polyp
- Papilloma

- Rhabdomyosarcoma

### Other Causes

- Perineal hernia [Dog]
- Pelvic fractures
- FUS/FLUTD [Cat]
- Post-traumatic urethral stricture
- Vaginal/Uterine prolapse

## Inflammatory Causes

### Cystitis/Urethritis

- Bacterial cystitis
  - E. coli
  - Staphylococcus sp.
  - Streptococcus sp.
  - Proteus sp.
  - Klebsiella sp.
  - Enterobacter sp.
  - Pseudomonas sp.
  - Corynebacterium sp.
- FUS/FLUTD [Cat]

### Other causes

- Pyelonephritis
- Vaginitis
- Endometritis
- Balanoposthitis
- Mycotic cystitis

- Candida sp.
- Parasitic cystitis
  - Capillaria sp.
- Toxic cystitis
  - Cytostatics

## Other Causes

- Reflex dyssynergia [Dog]
  - (Synchronous sphincter spasm and detrusor spasm in the male dog)

- Traumatic Causes
  - Bladder trauma/rupture
- Perianal disease
- Faecal urgency/rectal tenesmus
- Vaginitis/Endometritis
- Balanoposthitis
- Congenital defect
  - Urachal fistula
  - Urethral fistula
  - Ectopic ureters

## Diagnostic Approach

### *Urinary Urgency*

#### 1. Case History

#### 2. General Examination

#### 3. Neurological Examination

- Spinal Reflexes
  - Bicipital reflex (C6–C8)
  - Triceps reflex (C7–T1)
  - Patellar reflex (L4–L6)
  - Withdrawal reflex (C6–T1 and L6–S1)
  - Cutaneous trunci reflex (C7–T1)
  - Anal sphincter reflex (S1–S3)
  - Bladder – can it be expressed?

#### 4. Blood Tests

- Hct, Ery, Leuc
- TP
- Na, K, Ca
- Urea, Creatinine
- Diff BC

#### **MICROBIAL SEROLOGY**

- FeLV/FIV Antigen [Cat]

#### 5. Urinalysis

- Urinary output/volume
- Urine dip stick
- Specific gravity
- Urine sediment
  - Bacteria, yeast fungi
  - Erys, Leuc
  - Epithelial cells
  - Casts
  - Crystals
  - Tumour cytology
- Bacterial/fungal culture (cystocentesis)

#### 6. X-Ray Study

- Abdomen
- Pelvis
- Contrast urethrography
- Contrast/Double contrast urography
- Excretory urography

**7. Ultrasound**

- Abdomen

**8. Further Tests**

- Laparotomy

## Urinary Incontinence and Retention

Involuntary passing of urine (urine dribbling)  
 Paradoxical urinary incontinence with retention bladder  
 (overflow bladder)

### Common Causes

Dog	Cat
+++ Cystitis/Urethritis	+++ Cystitis/Urethritis
++ Oestrogen deficiency (Ovariohysterectomy)	++ FUS/FLUTD
++ Spinal disease	++ Spinal disease
++ Obstructive Causes	

### Full Bladder

#### Neurological Causes

#### Sphincter spasm (UMN Lesion)

- Spinal lesion cranial of S1
  - Discopathy
  - Vertebral fracture/luxation
  - Haemorrhage/Haematoma
  - Fibrocartilaginous Embolism
  - Tumours
  - Atlantoaxial subluxation [Dog]
  - Cervical Instability/ Stenosis (Wobbler Syndrome) [Dog]
  - Degenerative myelopathy
  - Myelitis
- Cerebral Causes
  - Traumatic brain injury
  - Encephalomeningitis
  - Brain tumours/Tumour metastasis

- Granulomatous meningoencephalitis (GME)

#### Detrusor atony (LMN Lesion)

- Sacral spinal lesion (S1–S3)
  - Fracture of the sacral bone
  - Lumbosacral stenosis (Cauda equina syndrome) [Dog]
- Lesion of the pelvic nerves
- Lesion of the pudendal nerve
- Dysautonomia (Key-Gaskell Syndrome) [Cat]
- Tail avulsion [Cat]

#### Reflex dyssynergia

- Synchronous sphincter spasm and detrusor spasm in the male dog

#### Obstructive Causes

- Urolithiasis

#### pH alkaline

- Struvite

- Ca Carbonate
- Ca Phosphate

### pH acidic

- Oxalate
- Cystine
- Urate
- FUS/FLUTD [Cat]
- Urinary tract tumours
  - Transitional cell carcinoma
  - Leiomyoma
  - Fibroma/Fibrosarcoma
  - Rhabdomyosarcoma
  - Squamous cell carcinoma
  - Canine transmissible venereal tumour [Dog]
  - Polyp
  - Papilloma
- Prostatic enlargement [Dog]
  - Prostatitis/Prostatic abscess
  - Prostatic hyperplasia
  - Prostatic cysts
  - Paraprostatic cyst
  - Prostatic carcinoma
- Other causes

- Post-traumatic urethral stricture
- Cystitis/Urethritis
- Pelvic fractures

### Empty Bladder

- Sphincter atony
  - Oestrogen deficiency [esp Dog] (ovariohysterectomy)
  - Testosterone deficiency
  - Post-traumatic (Urinary catheter)
  - Post obstruction (bladder distension)
  - Pregnancy
- Detrusor spasm (irritable bladder)
  - Bacterial cystitis
  - Psychogenic
- Congenital causes
  - Ectopic ureters
  - Urachal fistula
  - Urethral fistula

## Diagnostic Approach

### *Urinary Incontinence and Retention*

#### 1. Case History

#### 2. General Examination

#### 3. Neurological Examination

- Awareness/behaviour
- Body/limb posture and stance
- Locomotion
- Muscle tone/strength
- Spinal reflexes
  - Bicipital reflex (C6–C8)
  - Triceps reflex (C7–T1)

- Patellar reflex (L4–L6)
- Withdrawal reflex (C6–T1 and L6–S1)
- Cutaneous trunci reflex (C7–T1)
- Anal sphincter reflex (S1–S3)
- Bladder – can it be expressed?

#### 4. Blood Tests

- Hct, Ery, Leuc
- TP

- Na, K, Ca
- Urea, Crea
- Diff BC

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]

#### **5. Urinalysis**

- Urinary output/volume
- Urine dip stick
- Specific gravity
- Urine sediment
  - Bacteria
  - Erythrocytes, Leucocyte
  - Epithelial cells
  - Casts
  - Crystals

- Tumour cytology
- Bacterial culture (Cystocentesis)

#### **6. X-Ray Study**

- Abdomen/Pelvis
- Spine ± Myelography
  - Contrast urethrography
  - Contrast/Double contrast urography
  - Excretory urography

#### **7. Ultrasound**

- Abdomen

#### **8. Further Tests**

- Laparotomy
- Analysis of spinal tap fluid

## **Clinical Distinguishing Features of Urinary Incontinence/Retention with a Full Bladder**

<b>Ability to empty the bladder manually</b>		
	easy	difficult
Easy to catheterise	<ul style="list-style-type: none"> <li>• Detrusor atony (LMN Lesion) (Overflow bladder)           <ul style="list-style-type: none"> <li>– Sacral spinal lesion (S1–S3)</li> <li>– Lesion of the pelvic nerve</li> <li>– Lesion of the pudendal nerve</li> <li>– Dysautonomia (Key-Gaskell Syndrome)</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>• Reflex dyssynergia (Synchronous sphincter spasm and detrusor spasm in the male dog)</li> </ul>
Difficult to catheterise		<ul style="list-style-type: none"> <li>• Sphincter spasm (UMN Lesion)           <ul style="list-style-type: none"> <li>– Spinal lesion cranial of S1</li> <li>– Cerebral causes</li> </ul> </li> <li>• Urinary tract obstruction</li> </ul>

## Urinary Tract Infections, Chronic Recurrent

Potential sources of error/causes with ongoing and repeated urinary tract infections

### Therapeutic failure

- Choice of antibiotic
- Dosage error
- Too short treatment duration
- Bacterial resistance

### Reinfection/Superinfection

- Urinary tract obstruction
  - Urolithiasis
  - FUS/FLUTD [Cat]
  - Tumour of the urinary tract
  - Prostatic enlargement
  - Pelvic fractures
  - Post-traumatic urethral stricture
- Infection reservoir (source of infection)
  - Pyelonephritis
  - Vaginitis
  - Endometritis
  - Prostatitis [Dog]
  - Balanoposthitis
  - Abscess
  - Septicaemia

- Urachal diverticulum
- Urethroscopy
- Rectovaginal fistula
- Perianal disease
- Mycotic cystitis
  - Candida sp.
- Parasitic cystitis
  - Capillaria sp.
- Glucosuria
  - Diabetes mellitus
  - Chronic renal failure
- Frequent catheterisation
- Neurogenic urinary incontinence
- Immunosuppression
  - **Primary Immunosuppression**
  - **Secondary Immunosuppression**
  - FeLV/FIV [Cat]
  - Glucocorticoid long term therapy
  - Hypercortisolism (Cushing's Disease) [Dog]

### Diagnostic Approach

#### *Urinary Tract Infections, Chronic Recurrent*

##### 1. Case History

##### 2. General Examination

##### 3. Blood Tests

- Hct, Ery, Leuc
- Diff BC

- TP
- Na, K, Ca
- Urea, Crea

- Tumour cytology
- Bacterial/Fungal culture (Cystocentesis)  
(+ sensitivity)

### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen  
[Cat]

### **4. Urinalysis**

- Urinary output/volume
- Urine dip stick
- Specific gravity
- Urine sediment
  - Bacteria, Yeast fungi
  - Erys, Leuc
  - Epithelial cells
  - Casts
  - Crystals

### **5. X-Ray Study**

- Abdomen
- Pelvis
- Contrast urethrography
- Contrast/double contrast urography
- Excretory urography

### **6. Ultrasound**

- Abdomen

### **7. Further Tests**

- Laparotomy

## Oliguria/Anuria

Urinary output < 0.25ml/kg/h

### Common Causes

Dog	Cat
+++ Shock	+++ Shock
++ Urinary tract obstruction	++ Urinary tract obstruction
++ Acute renal failure	++ Acute renal failure
++ Chronic renal failure (final stage)	++ Chronic renal failure (final stage)

### Prerenal Causes

- Hypovolaemia
  - Dehydration
  - Shock
  - Blood loss
- Congestive heart failure

### Renal Causes

#### **Acute Renal Failure**

- Renal ischaemia
  - Trauma
  - Hypovolaemia
  - Hypotension
  - Anaesthesia

- Septicaemia
- Renal infarction
- Toxic nephritis

**Nephrotoxins**

- Haemoglobinuria/  
Myoglobinuria
- Amphotericin B
- Aminoglycosides (esp  
Gentamicin)
- Piperazine
- Cephalosporines
- Sulfonamides
- Tetracyclines
- NSAID
- Cytostatics
- Methoxyflurane
- Mycotoxins
- Ethylene glycol poisoning
- Heavy metal poisoning
- Toxic plants
- Household agents

- Glomerulonephritis

**Immune Complex Disease**

- FeLV/FIV [Cat]
- FIP Coronavirus [Cat]
- CAV-1 (Hepatitis c. c.)  
[Dog]
- Brucella sp. [Dog]
- Lyme Borreliosis sp. [Dog]
- Mycoplasma sp. [esp Cat]
- Septicaemia/bacterial  
endocarditis
- Chronic bacterial infection
- (Leishmania sp. [esp Dog])
- (Ehrlichia sp. [Dog])
- (Dirofilaria sp. [esp Dog])
- Pyometra
- Prostatitis [Dog]
- Pancreatitis
- Tumour disease
- Lupus erythematosus

- Rheumatoid arthritis
- Hypercortisolism (Cushing's  
Disease) [Dog]
- Glucocorticoid long term  
therapy
- Diabetes mellitus
- Pyelonephritis
- E. coli
- Staphylococcus sp.
- Streptococcus sp.
- Proteus sp.
- Klebsiella sp.
- Enterobacter sp.
- Pseudomonas sp.
- (Dioctophyma sp.)
- Interstitial nephritis
- Leptospira sp. [Dog]
- CAV-1 [Dog]
- Klebsiella sp.
- E. coli
- Proteus sp.
- Staphylococcus sp.
- Streptococcus sp.

**Chronic Renal Failure (End Stage)**

- Interstitial nephritis
- Renal amyloidosis
- Glomerulonephritis
- Pyelonephritis
- Renal tumours
  - Lymphosarcoma [esp Cat]
  - Renal carcinoma
  - Nephroblastoma
  - Cystadenocarcinoma [Dog]
- Renal cirrhosis (fibrosis)
- Renal abscess/-haematoma
- Renal calcification
- Nephrolithiasis
  - Struvite
  - Ca Carbonate

- Ca Phosphate
- Oxalate
- Cystine
- Urate
- Renal cysts [Cat]
- Squamous cell carcinoma
- Canine transmissible venereal tumour [Dog]
- Polyp
- Prostatic enlargement
  - Prostatitis/prostatic abscess
  - Prostatic hyperplasia
  - Prostatic cysts
  - Paraprostatic cyst
  - Prostatic carcinoma
- Other causes
  - Post-traumatic urethral stricture
  - Cystitis/urethritis
  - Pelvic fractures

## Postrenal Causes

### Urinary Obstruction

- Urolithiasis
- pH alkaline**
  - Struvite
  - Ca Carbonate
  - Ca Phosphate
- pH acidic**
  - Oxalate
  - Cystine
  - Urate
- FUS/FLUTD [Cat]
- Urinary tumours
  - Transitional cell carcinoma
  - Leiomyoma
  - Fibroma/Fibrosarcoma
  - Rhabdomyosarcoma

- Squamous cell carcinoma
- Canine transmissible venereal tumour [Dog]
- Polyp
- Prostatic enlargement
  - Prostatitis/prostatic abscess
  - Prostatic hyperplasia
  - Prostatic cysts
  - Paraprostatic cyst
  - Prostatic carcinoma
- Other causes
  - Post-traumatic urethral stricture
  - Cystitis/urethritis
  - Pelvic fractures

### Traumatic Causes

- Neurological micturition disturbance
- Bladder rupture/perforation
- Urethral perforation
- Ureteral avulsion

## Diagnostic Approach

### Oliguria/Anuria

- 1. Case History**
- 2. General Examination**
- 3. Neurological Examination**

- Spinal reflexes
  - Bicipital reflex (C6–C8)
  - Triceps reflex (C7–T1)
  - Patellar reflex (L4–L6)
  - Withdrawal reflex (C6–T1 and L6–S1)

- Cutaneous trunci reflex (C7–T1)
- Anal sphincter reflex (S1–S3)
- Bladder – can it be expressed?

### 4. Blood Tests

- Hct, Ery, Leuc
- TP, Alb, Glob
- Na, K, Ca
- Urea, Creatinine
- Diff BC

- FIP Profile [Cat]
  - TP
  - Alb/Glob Ratio
  - Bili
  - GOT
  - Serum electrophoresis
- Ethylene glycol detection
- FeLV-/FIV Antigen [Cat]
- Leptospira Antibodies [Dog]

### **5. Urinalysis**

- Urinary output/volume
- Urine dip stick
- Specific gravity
- Urine sediment
  - Bacteria, Yeast fungi
  - Erys, Leuc
  - Epithelial cells

- Casts
- Crystals
- Tumour cytology
- Bacterial/Fungal culture (Cystocentesis)

### **6. X-Ray Study**

- Abdomen
- Pelvis
- Contrast urethrography
- Contrast/Double contrast urography
- Excretory urography

### **7. Ultrasound**

- Abdomen ± renal biopsy

### **8. Further Tests**

- Electrocardiogram (ECG)
- Laparotomy

## **Polydipsia/Polyuria**

**Polydipsia:** increased water intake (Dog: > 90 ml/kg/day, Cat: > 45 ml/kg/day)

**Polyuria:** increased urination (Dog/Cat: > 45 ml/kg/day)

### **Common Causes**

Dog	Cat
+++ Pyometra	+++ Chronic renal failure
+++ Diabetes mellitus	++ Diabetes mellitus
++ Diabetes insipidus	++ Hyperthyroidism
++ Glucocorticoid therapy	
++ Hypercortisolism (Cushing's Disease)	
++ Chronic renal failure	
+ Liver disease	

## Renal Causes

### Chronic Renal Failure

- Glomerulonephritis
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
  - CAV-1 (Hepatitis c. c.) [Dog]
  - Brucella sp. [Dog]
  - Lyme Borrelia sp. [Dog]
  - (Leishmania sp. [esp Dog])
  - (Ehrlichia sp. [Dog])
  - (Dirofilaria sp. [esp Dog])
  - Mycoplasma sp. [esp Cat]
  - Septicaemia/bacterial endocarditis
  - Chronic bacterial infection
  - Pyometra
  - Prostatitis [Dog]
  - Pancreatitis
  - Tumour disease
  - Lupus erythematosus
  - Rheumatoid arthritis
  - Hypercortisolism (Cushing's disease) [Dog]
  - Glucocorticoid long term therapy
  - Diabetes mellitus
- Pyelonephritis
  - E. coli
  - Staphylococcus sp.
  - Streptococcus sp.
  - Proteus sp.
  - Klebsiella sp.
  - Enterobacter sp.
  - Pseudomonas sp.
  - (Diectophyma sp.)
- Interstitial nephritis
- Nephrotoxins
  - Haemoglobinuria/Myoglobinuria

- Amphotericin B
- Aminoglycosides
- Cephalosporines
- Sulfonamides
- Tetracyclines
- NSAID
- Cytostatics
- Methoxyflurane
- Mycotoxins
- Ethylene glycol poisoning
- Heavy metal poisoning
- Toxic plants
- Household agents
- Renal tumours
  - Lymphosarcoma [esp Cat]
  - Renal carcinoma
  - Nephroblastoma
  - Cystadenocarcinoma [Dog]
- Renal amyloidosis
- Nephrolithiasis
  - Struvite
  - Ca Carbonate
  - Ca Phosphate
  - Oxalate
  - Cystine
  - Urate
- Renal cysts

### Other Causes

- Postobstructive diuresis
- Polyuric phase after acute renal failure

### Extrarenal Causes

#### Drugs

- Glucocorticoids
- Anticonvulsants
  - Phenobarbital
  - Primidon

- Diuretics
- Continuous drip infusion
- Thyroid hormone supplementation
- Salty food
- Vitamin D

## Metabolic Causes

- Hypercortisolism (Cushing's disease) [Dog]
- Diabetes mellitus
- Hyperthyroidism [Cat]
- Hypercalcaemia
- Hypokalaemia [esp Cat]
- Hyponatraemia
- Hypoglycaemia (Insulinoma)

- Central/renal diabetes insipidus [esp Dog]
- Hypoadosteronism [Dog]
- Hypocortisolism (Addison's disease) [Dog]
- Acromegaly (STH excess)
- Phaeochromocytoma

## Other Causes

- Pyometra
- Fever
- Psychogenic Causes
- Acute hepatitis
- Liver cirrhosis/portacaval shunt
- Polycythaemia vera

## Diagnostic Approach

### *Polydipsia/Polyuria*

#### 1. Case History

#### 2. General Examination

#### 3. Blood Tests

- Hct, Ery, Leuc
- Na, K, Ca, P
- TP, Alb, Glob
- GPT, AP, Urea, Crea
- BG
- Blood Sedimentation Rate (BSR)
- FIP Profile [Cat]
  - TP
  - Alb/Glob Ratio
  - Bili
  - GOT
  - Serum electrophoresis
- Diff BC

#### MICROBIAL SEROLOGY

- FeLV-/FIV Antigen [Cat]

#### FUNCTION TESTS

- Adrenal gland function test [Dog]
  - Dexamethasone Suppression test
  - ACTH Stimulation test
  - Cortisol/Creatinine Ratio
- T<sub>4</sub>, fT<sub>4</sub>
- T<sub>3</sub> Suppression test [Cat]
- Urine concentration test [Dog]
- Creatinine/Inulin Clearance Test
- ADH Test [Dog]
- Parathormone

#### 4. Urinalysis

- Urinary output/volume
- Urine dip stick
- Specific gravity

- Urine sediment
  - Bacteria, Yeast fungi
  - Erys, Leuc
  - Epithelial cells
  - Casts
  - Crystals
  - Tumour cytology
- Bacterial/Fungal culture (Cystocentesis)

### 5. X-Ray Study

- Abdomen

- Pelvis
- Contrast urethrography
- Contrast/Double contrast urography
- Excretory urography

### **6. Ultrasound**

- Abdomen ± renal biopsy
- Laparotomy

### 7. Further Tests

## Renomegaly

**Kidney enlargement:** Renal diameter (Pole to pole) > 3–3.5 × lumbar vertebra L2 (vd radiographic plane)

### Common Causes

Dog	Cat
+++ Renal tumours	+++ Renal tumours
++ Hydronephrosis	++ Renal cysts ++ FIP

### Unilateral Renomegaly

- Trauma
  - Haematoma
- Renal tumours
  - Renal carcinoma [Dog]
  - Nephroblastoma
- Hydronephrosis
  - Urolithiasis
  - Ureteral stricture
  - Renal tumours
  - Pyelonephritis
- Compensatory renal hypertrophy
  - Cirrhotic kidney

- Nephrectomy
- Renal infarction
- Renal dysplasia
- Renal abscess

### Bilateral Renomegaly

- Renal tumours
  - Lymphosarcoma [Cat]
  - Cystadenocarcinoma [German Shepherd Dog]
- Nephritis
  - Leptospira sp. [Dog]
  - FIP Coronavirus [Cat]
- Hydronephrosis

- Urolithiasis
- Ureteral stricture
- Renal tumours
- Pyelonephritis
- Renal cysts
- Ethylene glycol poisoning
- Diabetes mellitus

## Diagnostic Approach

### *Renomegaly*

#### 1. Case History

#### 2. General Examination

#### 3. Blood Tests

- Hct, Ery, Leuc
- TP, Alb, Glob
- Na, K, Ca
- Urea, Crea
- FIP Profile [Cat]
  - TP
  - Alb/Glob ratio
  - Bili
  - GOT
  - Serum electrophoresis
- Diff BC

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Leptospira Antibodies [Dog]

#### 4. Urinalysis

- Urinary output/volume
- Urine dip stick
- Specific gravity

- Urine sediment
  - Bacteria, Yeast fungi
  - Erys, Leuc
  - Epithelial cells
  - Casts
  - Crystals
  - Tumour cytology
- Bacterial/Fungal culture (Cystocentesis)

#### 5. X-Ray Study

- Abdomen
- Pelvis
- Contrast urethrography
- Contrast/Double contrast urography
- Excretory urography

#### 6. Ultrasound

- Abdomen ± renal biopsy

#### 7. Further Tests

- Laparotomy

# **6 Principal Symptoms of the Reproductive Tract**

---

Miscarriage/Foetal Death.....	162
Fertility Disorders .....	164
Dystocia .....	167
Testicular Enlargement .....	169
Mammary Discharge.....	170
Mammary Enlargement .....	171
Penile Prolapse .....	173
Postpartal Complications.....	174
Preputial Discharge.....	176
Vaginal Discharge .....	179
Vaginal Prolapse .....	181
Abnormal Cycle .....	182

## **Further Relevant Principal Symptoms**

Polydipsia/Polyuria (Ch. 5: Urological Principal Symptoms) .....	
Hypersexuality/Nymphomania (Ch. 13: Behavioural Disorders) .....	

## **Miscarriage/Foetal Death**

Premature termination of the pregnancy via delivery or foetal death

---

<b>Common Causes</b>	
Dog	Cat
+++ Systemic infections	+++ Systemic infections
++ Brucellosis	++ FeLV/FIV
++ Uterine disease	++ Uterine disease
++ Endocrinopathies	++ Endocrinopathies

## Maternal Factors

### Infectious Causes

- Viral causes
  - FeLV/FIV [Cat]
  - Canine/feline Herpes virus
  - Canine/feline Parvovirus
  - Canine distemper virus  
[Dog]
- Bacterial causes
  - Brucella sp. [Dog]
  - Mycoplasma sp.
  - E. coli
  - Salmonella sp.
  - Campylobacter sp.
  - Mycobacterium sp.
- Rickettsial causes
  - Coxiella sp. (Q Fever)  
[Dog]
- Parasitic causes
  - Toxoplasma sp.
- Endometritis/Pyometra
  - E. coli

### Other Diseases

- Uterine diseases
  - Trauma

- Glandular cystic endometrial hyperplasia
- Uterine prolapse
- Uterine torsion
- Uterine rupture
- Uterine adhesions
- Congenital uterine malformation
- Extrauterine pregnancy
- Uterine tumours
- Endocrine Causes
  - Hypothyroidism [Dog]
  - Diabetes mellitus
  - Corpus luteum dysfunction
- Drugs
  - Chloramphenicol
  - Oestrogens
  - Glucocorticoids
  - Prostaglandins
  - Bromocriptine
  - Cytostatics
  - Ergotamine
  - Toxic plants

### Foetal Factors

- Lethal genetic defects
- Lethal developmental disorders

## Diagnostic Approach

### *Miscarriage/Foetal Death*

#### 1. Case History

- TSH-/TRH Stimulation Test [Dog]
- Serum Progesteron

#### 2. General Examination

#### 3. X-Ray Study

- Abdomen

#### 4. Blood Tests

- Hct, Ery, Leuc
- Na, K, Ca
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- Diff BC

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Brucella Antibodies [Dog]
- Toxoplasma Antibodies

#### **FUNCTION TESTS**

- T<sub>4</sub>, fT<sub>4</sub>

#### 5. Urinalysis

- Urine dip stick
- Specific gravity
- Urine sediment

#### 6. Endoscopy

- Vaginoscopy
- ± Vaginal smear
  - Cytology
  - Bacterial culture

#### 7. Further Tests

- Histopathological examination of the placenta and dead foetuses

## Fertility Disorders

**Ovulation:** Dog: ca. 48 h after LH Peak (2<sup>nd</sup> third of the oestrus)  
Cat: 24–48 h after mating

**Mating date:** 2<sup>nd</sup>–4<sup>th</sup> day of the receptive period (Serum progesterone > 5 ng/ml)

**Pregnancy diagnosis:** Ultrasound from day 25, Palpation: from day 30, X-Rays: from day 50

**Gestation period:** Dog: 63 days; Cat: 60 days

### Common Causes

Dog

Cat

+++ Wrong mating date

+++ Infectious disease

++ Infectious disease

## Female Causes of Infertility

- Wrong mating date [Dog]
- Ovariectomy
- Ovariohysterectomy
- Rejection/aversion of partner
- Sexual immaturity
- Endometritis/pyometra
- Glandular cystic endometrial hyperplasia [Dog]
- Ovarian cysts
- Ovarian tumours
- Embryonic death/resorption
- Absent ovulation stimulus [Cat]
- Infectious causes
  - FeLV/FIV [Cat]
  - Canine/feline Herpes virus
  - Canine/feline Parvovirus
  - Canine distemper virus [Dog]
  - Brucella sp. [Dog]
  - Mycoplasma sp. [esp Cat]
  - E. coli
  - Salmonella sp.
  - Campylobacter sp.
  - Mycobacterium sp.
- Endocrine causes
  - Hypothyroidism [Dog]
  - Hypercortisolism (Cushing's Disease) [Dog]
- Uterine malformations
- Chromosomal defects
- Extrauterine pregnancy

## Male Causes of Infertility

- Sexual immaturity
- Disruptive factors/pain
- Testicular hypoplasia/ degeneration
  - Orchitis
  - High age

- Endogenous/exogenous oestrogen
- Hypothyroidism [Dog]
- Hypercortisolism (Cushing's disease) [Dog]
- Klinefelter's syndrome (XXY)
- Ketoconazole
- Hypothalamic lesion
- Warmth/radiation
- Heavy metal poisoning
- Bilateral cryptorchism
- Orchitis/Epididymitis
  - Canine distemper virus [Dog]
  - FIP Coronavirus [Cat]
  - Brucella sp. [Dog]
  - Staphylococcus sp.
  - Streptococcus sp.
  - E. coli
  - Mycoplasma sp. [esp Cat]
  - (Ehrlichia sp. [Dog])
  - (Rickettsia sp. [Dog])
  - Autoimmune diseases
- Testicular tumours [esp Dog]
  - Sertoli cell tumour
  - Leydig cell tumour
  - Seminoma
- Prostatic disease [Dog]
- Balanoposthitis
- Penile/Preputial tumours
- Phimosis
- Systemic disease
- Drugs
  - Ketoconazole
  - Glucocorticoids
  - Anabolics
  - Antiparasitics
- Pathological retrograde ejaculation
- Spermatocele

## Diagnostic Approach

### *Female Fertility Disturbances*

#### 1. Case History

#### 2. General Examination

#### 3. Endoscopy

- Vaginoscopy
- ± Vaginal smear
- Cytology
- Bacterial culture

#### 4. Blood Tests

- Hct, Ery, Leuc
- Na, K, Ca
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- FIP Profile [Cat]
  - TP
  - Alb/Glob ratio
  - Bili
  - GOT
  - Serum electrophoresis
- Diff BC

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]

- Brucella Antibodies [Dog]
- Toxoplasma Antibodies
- Herpes virus Antibodies

#### **FUNCTION TESTS**

- Serum Progesterone
- T<sub>4</sub>, fT<sub>4</sub>
- TSH-/TRH Stimulation test [Dog]
- Adrenal gland function test [Dog]
  - Dexamethasone Suppression test
  - ACTH Stimulation test
  - Cortisol/Creatinine Ratio

#### 5. Urinalysis

- Urine dip stick
- Specific gravity
- Urine sediment

#### 6. Ultrasound

- Abdomen

## Diagnostic Approach

### *Male Fertility Disturbances*

#### 1. Case History

#### 2. General Examination

#### 3. Penile/Preputial Examination

- ± Preputial smear
- Cytology
- Bacterial culture

#### 4. Ejaculate Analysis

- Amount, colour, consistency
- Sperm density
- Sperm motility, Sperm vitality
- Sperm anomalies
- AP
- Leuco, Erys
- Bacterial culture
- Karyotyping

**5. Blood Tests**

- Hct, Ery, Leuc
- Na, K, Ca
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- FIP Profile [Cat]
  - TP
  - Alb/Glob ratio
  - Bili
  - GOT
  - Serum electrophoresis
- Diff BC

**MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Brucella Antibodies [Dog]

**FUNCTION TESTS**

- Serum Testosterone

- T<sub>4</sub>, fT<sub>4</sub>
- TSH-/TRH stimulation test [Dog]
- Dexamethasone Screening test/ ACTH stimulation test [Dog]

**6. Urinalysis**

- Urine dip stick
- Specific gravity
- Urine sediment

**7. Ultrasound**

- ± Testicular biopsy
  - Cytology
  - Bacterial culture

## Dystocia

**Physiological Parturition:**

1. Temperature drop of 1–1.5 °C shortly before parturition
2. Cervical opening stage
  - Opening contractions (6–12 h)
3. Foetal delivery
  - Active contractions (abdominal muscle pressure) (< 4 h)
  - Rupture of the foetal membrane
  - Delivery
4. After birth stage
  - Placental delivery variably one by one after each birth or all together (< 1 h)

**Abnormal parturition (Dystocia):**

1. Poor maternal general condition
2. Strong non-productive active contractions > 30 min
3. Time interval between rupture of the foetal membrane and delivery of the first foetus > 4 h
4. Time intervals in between deliveries > 2 h
5. Gestation > 70 d

<b>Common Causes</b>	
Dog	Cat
+++ Foetal factors	+++ Foetal factors
++ Obstructed birth canal	++ Obstructed birth canal
++ Uterine inertia	++ Uterine inertia

## Maternal Factors

### Uterine Inertia

- Exhaustion
- Hypoglycaemia
- Hypocalcaemia (Eclampsia)
- Dehydration
- Uterine rupture
- Diaphragmatic hernia
- Abdominal pain
- Systemic disease
- Nervousness
- Obesity
- Age (young/old)

### Obstructed Birth Canal

- Narrow pelvis (brachycephalic dog breeds)

- Pelvic fractures (healed)
- Not fully dilated cervix
- Dry birth canal
- Uterine tumours
- Glandular cystic endometrial hyperplasia
- Uterine adhesions
- Uterine torsion
- Congenital uterine malformations

### Foetal Factors

- Foetal oversize (uniparous delivery)
- Foetal position/pose anomalies
- Foetal death
- Foetal malformations

## Diagnostic Approach

### Dystocia

#### 1. Case History

- Foetal vital signs
- Foetal position/pose anomalies

#### 2. General Examination

#### 6. Blood Tests

- Hct
- TP, BG
- Na, K, Ca

#### 3. Endoscopy

#### 7. Further Tests

- Vaginoscopy (Cervical position)

- Digital Examination (obstructed birth canal)

#### 4. X-Ray Study

- Pelvis
- Abdomen

#### 5. Ultrasound

## Testicular Enlargement

Larger than normal size of testes uni or bilaterally

Common Causes	
Dog	Cat
+++ Testicular tumours	+++ Bite/scratch wounds
++ Scrotal dermatitis	++ Orchitis/Epididymitis
++ Orchitis/Epididymitis	

## Testicular Disease

### Orchitis/Epididymitis

- Viral orchitis
  - Canine distemper virus [Dog]
  - FIP Coronavirus [Cat]
- Bacterial orchitis
  - Brucella sp. [Dog]
  - Staphylococcus sp.
  - Streptococcus sp.
  - E. coli
  - Mycoplasma sp [esp Cat]
- Rickettsial orchitis
  - (Ehrlichia sp. [Dog])
  - (Rickettsia sp. [Dog])

- Autoimmune disease

### Testicular Tumours

- Sertoli cell tumour [esp Dog]
- Leydig cell tumour [esp Dog]
- Seminoma [esp Dog]

### Other Causes

- Haematoma
- Bite wounds
- Scrotal dermatitis [esp Dog]
- Scrotal hernia
- Testicular torsion [esp Dog]
- Spermatocele

## Diagnostic Approach

### Testicular Enlargement

- 1. Case History**
- 2. General Examination**
- 3. Testicular palpation**
- 4. Ultrasound**
  - Testicle/Epididymis

### 5. Ejaculate Analysis

- Cytology
- Bacterial culture

### 6. Blood Tests

- Hct, Ery, Leuc
- FIP Profile [Cat]

- TP
- Alb/Glob Ratio
- Bili
- GOT
- Serum electrophoresis

- Brucella Antibodies [Dog]

### **7. Further Tests**

- Testicular biopsy
  - Cytology
  - Bacterial culture

### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]

## **Mammary Discharge**

Fluid secretion from the mammary gland in the female

### **Common Causes**

Dog	Cat
+++ Pregnancy	+++ Pregnancy
++ Pseudopregnancy	++ Mastitis
++ Mastitis	++ Ulcerating Mammary tumours
++ Ulcerating Mammary tumours	

### **Milk Secretion (Galactorrhoea)**

- Pregnancy
- Pseudopregnancy
- Hypothyroidism [Dog]
- Pituitary gland tumour

### **Haemorrhagic Discharge**

#### **Mastitis**

- Bacterial Mastitis
  - E. coli
  - Staphylococcus sp.
  - Streptococcus sp.

### **Purulent Discharge**

#### **Mastitis**

- Bacterial Mastitis
  - E. coli
  - Staphylococcus sp.
  - Streptococcus sp.

### **Ulcerating Mammary Tumour**

- Adenocarcinoma

#### **Mammary Tumours**

- Adenocarcinoma
- Squamous cell carcinoma
- Sarcoma
- Mixed tumour
- Myoepithelioma
- Haemangiosarcoma

**Traumatic Causes**

- Blunt/sharp trauma

- Foreign body
- Haematoma

**Diagnostic Approach*****Mammary Discharge*****1. Case History****2. General Examination****3. Palpation of the Mammary Gland****4. Fluid Analysis of the Mammary Discharge**

- Cytology
- Bacterial culture

**5. Ultrasound**

- Uterus

— Pregnancy exclusion

- Mammary Glands

**6. X-Ray Study**

- Thorax (in presence of mammary tumours)

**7. Blood Tests**

- Hct, Ery, Leuc
- Diff BC

**Mammary Enlargement**

Increased size of the mammary gland in the female or male

**Common Causes****Dog**

- +++ Pregnancy
- ++ Pseudopregnancy
- ++ Malignant mammary tumours  
(ca. 50%)
- ++ Precancerous mammary  
(ca. 25%)
- ++ Benign mammary tumours  
(ca. 25%)
- + Mastitis

**Cat**

- +++ Pregnancy
- ++ Malignant mammary tumours  
(ca. 90%)
- ++ Mastitis
- ++ Feline fibroadenomatosis

## In the Female Animal

### Mammopathy

- Milk
  - Pregnancy
  - Pseudopregnancy
- Bacterial Mastitis
  - E. coli
  - Staphylococcus sp.
  - Streptococcus sp.
- Mammary Tumours

### Benign Mammary Tumours

- Adenoma, complex
- Adenoma
- Lipoma
- Mixed tumour
- Haemangioma
- Cysts
- Myoepithelioma
- Fibroma
- Osteoma
- Chondroma

### Malignant Mammary Tumours

- Adenocarcinoma
- Squamous cell carcinoma
- Mixed tumour
- Myoepithelial carcinoma
- Complex carcinoma
- Poorly differentiated carcinoma
- Carcinosarcoma
- Fibrosarcoma
- Osteosarcoma
- Chondrosarcoma
- Liposarcoma
- Lymphosarcoma
- Lymphoma
- Mast cell sarcoma

- Mast cell tumour
- Other Causes
  - Foreign body
  - Abscess
  - Haematoma
  - Larva migrans granuloma

## In the Male Animal

### Gynaecomastia

- Testicular tumours  
(endogenous oestrogen) [esp Dog]
  - Sertoli cell tumour
  - Leydig cell tumour
  - Seminoma
- Orchitis
  - Canine distemper virus [Dog]
  - FIP Coronavirus [Cat]
  - Brucella sp. [Dog]
  - Staphylococcus sp.
  - Streptococcus sp.
  - E. coli
  - Mycoplasma sp. [esp Cat]
  - (Ehrlichia sp. [Dog])
  - Autoimmune disease
- Mammary tumours
- Drugs
  - Gestagens
  - Ketoconazole
  - Metronidazole
- Other Causes
  - Foreign body
  - Abscess
  - Haematoma

## Diagnostic Approach

### *Mammary Enlargement*

- 1. Case History**
- 2. General Examination**
- 3. Palpation of the Mammary Gland**
- 4. Fluid Analysis (of Mammary Discharge)**
  - Cytology
  - Bacterial culture
- 5. Testicular Examination (Male)**
  - Palpation
- 6. X-Ray Study**
  - Thorax (in presence of mammary tumours)
- 7. Blood Tests**
  - Hct, Ery, Leuc
  - GPT, AP, Urea, Crea, BG
- 8. Further Tests**
  - Histopathological examination after mastectomy

## Penile Prolapse

**Paraphimosis:** Penile strangulation caused during erection due to a too narrow preputial opening (phimosis)

**Priapism:** Painful and persistent erection in absence of a sexual stimulus

### Paraphimosis

- Congenital phimosis
- Acquired phimosis
  - cicatricial stricture
- Preputial eversion
- Adhesions of hair on the glans penis
- Penile oedema
- Fracture of the penile bone
- Penile tumours
  - Canine transmissible venereal tumour

- Squamous cell carcinoma
- Haemangiosarcoma
- Melanoma
- Mast cell tumour
- Papilloma

### Priapismus

- Thrombosis of the erectile tissue

## Diagnostic Approach

### *Penile Prolapse*

#### 1. Case History

#### 2. General Examination

#### 3. Penile Examination

#### 4. X-Ray Study

- Penis

#### 5. Ultrasound

- Erectile tissue

## Postpartal Complications

### Puerperal disorder

#### In the Mother

- Birth Injury
  - Perineal tear
  - Organ rupture (uterus, cervix, vagina, bladder, abdominal wall)
  - Bladder paralysis
  - Pelvic fractures
  - Luxation of the sacral bone
  - Uterine prolapse
  - Vaginal prolapse
  - Rectal prolapse
  - Pulmonary emphysema
  - Haemorrhage
- Placental subinvolution [Dog]
  - Eosinophilic collagenous accumulation
- Endometritis/Pyometra
- Endotoxicosis
  - Placental retention
  - Placental subinvolution
  - Endometritis/pyometra
- Bacterial Mastitis
  - *E. coli*
  - *Staphylococcus* sp.
  - *Streptococcus* sp.

- Eclampsia
  - Hypocalcaemic tetany
- Placental retention [Dog]
- Agalactia
- Disturbed nurturing behaviour
  - Exaggerated nurturing
  - Disinterest
  - Aggression/infanticide

#### In the Neonate

- Birth Injury
  - Contusions
  - Fractures
- Congenital deformations
- Low birth weight
- Undernourishment (Hypoglycaemia)
  - Agalactia
  - Mastitis
  - Maternal aggression
  - Congenital deformation (Cleft palate)
  - Weakness
  - Litter mates, competition
- Anaesthetic damage
  - Respiratory depression

- Neonatal septicaemia/  
Umbilical infection
  - E. coli
  - Streptococcus sp.
  - Staphylococcus sp.
- Viral infectious disease
  - Canine distemper virus [Dog]
  - CAV-1 (Hepatitis c. c.)  
[Dog]
  - Canine/feline Herpes virus
  - Canine/feline Parvovirus
  - Feline Calici virus [Cat]
  - FeLV/FIV [Cat]
  - Rota-/Coronavirus enteritis
- Bacterial infectious disease
  - Bordetella sp.
  - Pasteurella sp.
  - E. coli
  - Salmonella sp.
- Parasitic infectious disease
  - Campylobacter sp.
  - Brucella sp. [Dog]
- Injuries caused by the mother
  - Bite injuries
  - Licking injuries
- Surfactant deficiency
  - Premature birth
- Neonatal isoerythrolysis [Cat]
  - Blood type A in neonate  
with blood type B in mother
- Primary immunosuppression

## Diagnostic Approach

### *Postpartal Maternal Complications*

#### 1. Case History

#### 2. General Examination

#### 3. Endoscopy

- Vaginoscopy

#### 4. Milk Examination

- Cytology
- Bacterial culture

#### 5. Blood Tests

- Hct, Ery, Leuc
- Na, K, Ca
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- Blood Sedimentation (BSR)
- Diff BC

#### MICROBIAL SEROLOGY

- FeLV-/FIV Antigen [Cat]

#### 6. Urinalysis

- Urine dip stick
- Specific gravity
- Urine sediment

#### 7. X-Ray Study

- Abdomen

#### 8. Ultrasound

- Abdomen

#### 9. Further Tests

- Laparotomy  
(Ovariohysterectomy)

## Diagnostic Approach

### *Postpartal Neonatal Complications*

#### 1. Case History

#### 2. General Examination

#### 3. Inspection of the orifices

- Congenital deformations

#### 4. Blood Tests

- Hct, Ery, Leuc
- TP, BG
- Diff BC

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]

#### **FURTHER EXAMINATIONS**

- Blood culture
- Blood typing [Cat]

#### 5. Urinalysis

- Urine dip stick
- Specific gravity
- Urine sediment

#### 6. Faecal Examination

- Plain examination
- Flotation
- Bacterial culture
- Parvovirus Antigen

#### 7. X-Ray Study

- Whole body

#### 8. Ultrasound

- Heart
- Abdomen

#### 9. Further Tests

- Maternal Examination
  - Milk examination
  - Faecal examination
- Comparison to litter mates
- Histopathological examination of dead neonates

## Preputial Discharge

### Common Causes

Dog	Cat
+++ Seminal fluid	+++ Cystitis/Urethritis
++ Balanoposthitis	++ FUS/FLUTD
++ Cystitis/Urethritis	++ Urinary incontinence
++ Prostatitis	
++ Urinary incontinence	

## Purulent Discharge

- Balanoposthitis [esp Dog]
  - Staphylococcus sp.
  - Streptococcus sp.
  - E. coli
  - Mycoplasma sp.
  - Moraxella sp.
  - Proteus sp.
  - Klebsiella sp.
  - Pseudomonas sp.
  - Corynebacterium sp.
  - Bacillus sp.
  - Acinetobacter sp.
- Cystitis/Urethritis
  - E. coli
  - Staphylococcus sp.
  - Streptococcus sp.
  - Proteus sp.
  - Klebsiella sp.
  - Enterobacter sp.
  - Pseudomonas sp.
  - Corynebacterium sp.
  - Candida spp.
  - Capillaria sp.
- Pyelonephritis
- Prostatitis/prostatic abscess [Dog]
- Penile/preputial tumours
  - Canine transmissible venereal tumour [Dog]
  - Squamous cell carcinoma
  - Haemangiosarcoma
  - Mast cell tumour
  - Melanoma
  - Papilloma
- Phimosis/paraphimosis

## Haemorrhagic Discharge

### Penile/Preputial Tumour

- Canine transmissible venereal tumour [Dog]
- Squamous cell carcinoma
- Haemangiosarcoma
- Mast cell tumour
- Melanoma
- Papilloma
- Urinary tract haemorrhage
  - Trauma
  - Pyelonephritis
  - Cystitis/Urethritis
  - Prostatic disease [Dog]
  - Nephrolithiasis/Urolithiasis
  - FUS/FLUTD [Cat]
  - Urinary tract tumours
  - Coagulopathies
- Trauma/foreign body
- Phimosis/Paraphimosis
- Balanoposthitis [esp Dog]

### Urinary Incontinence

- Neurological Causes

### Full Bladder

- Sphincter spasm (UMN Lesion)
- Detrusor atony (LMN Lesion)
- Reflex dyssynergia [Dog]

### Empty Bladder

- Sphincter atony
- Detrusor spasm (irritable bladder)

- Congenital Causes
- Obstructive Causes
  - Urolithiasis
  - Urinary tract tumours
- Prostatic enlargement [Dog]
- FUS/FLUTD [Cat]
- Post-traumatic urethral stricture

## Diagnostic Approach

### *Preputial Discharge*

- 1. Case History**
- 2. General Examination**
- 3. Penile Examination**
- 4. Rectal Examination [Dog]**

- 5. Analysis of Preputial Secretion/ Preputial Smear**

- Cytology
- Bacterial culture

- 6. Blood Tests**

- Hct, Ery, Leuc
- Urea, Crea
- Diff BC
- Na, K, Ca

### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]

### **COAGULATION**

- Bleeding time
- Prothrombin time (PT/Quick)
- (Activated) partial Thromboplastin time (PTT/aPTT)

- Fibrin degradation product (FDP)
- Thrombocyte number

- 7. Urinalysis**

- Urinary output/volume
- Urine dip stick
- Specific gravity
- Urine sediment
  - Bacteria
  - Erys, Leuc
  - Epithelial cells
  - Casts
  - Crystals
  - Tumour cytology
- Bacterial culture (Cystocentesis)

- 8. X-Ray Study**

- Abdomen
- Pelvis
- Contrast urethrography
- Contrast/Double contrast urography
- Excretory urography

- 9. Ultrasound**

- Abdomen ± Prostatic biopsy

## Vaginal Discharge

Common Causes	
Dog	Cat
+++ Endometritis/Pyometra	+++ Endometritis/Pyometra
++ Urinary tract disease	++ Urinary tract disease
++ Peripartal complications	++ Vaginitis
++ Vaginitis	

### Seromucous Discharge

- Physiological discharge
  - Late metoestrus
  - Late stage pregnancy
  - Postpartum
- Mucometra/hydrometra

### Purulent Discharge

- Physiological discharge
  - Early metoestrus
- Endometritis/pyometra
  - E. coli
- Vaginitis
  - Juvenile vaginitis
  - Urinary incontinence
  - Urinary tract infections
  - Congenital deformations
  - Vaginal tumours
  - Herpes virus
  - E. coli
  - Pasteurella sp.
  - Streptococcus sp.
  - Chlamydia sp.
  - Brucella sp.
  - Pseudomonas sp.
  - Mycoplasma sp.
  - Abscess/haematoma
  - Foreign body

- Cystitis/Urethritis
  - E. coli
  - Staphylococcus sp.
  - Streptococcus sp.
  - Proteus sp.
  - Klebsiella sp.
  - Enterobacter sp.
  - Pseudomonas sp.
  - Corynebacterium sp.

### Haemorrhagic Discharge

- Physiological discharge
  - Proestrus/oestrus
  - until ca. 6 weeks postpartum
- Birth injuries
- Uterine torsion
- Imminent miscarriage
- Foetal death
- Placental retention [Dog]
- Placental subinvolution [Dog]
- Vaginal tumours
  - Canine transmissible venereal tumour [Dog]
  - Leiomyoma
- Urinary tract haemorrhage
  - Trauma
  - Pyelonephritis
  - Cystitis/Urethritis
  - Nephrolithiasis/Urolithiasis

- FUS/FLUTD [Cat]
- Urinary tract tumours
- Coagulopathy

## Urinary Incontinence

- Neurological Causes

## Full bladder

- Sphincter spasm (UMN Lesion)
- Detrusor atony (LMN Lesion)

## Empty bladder

- Sphincter atony
- Detrusor spasm (irritable bladder)
- Congenital causes
- Obstructive Causes
  - Urolithiasis
  - Urinary tract tumours
  - FUS/FLUTD [Cat]
  - Post-traumatic urethral stricture

## Diagnostic Approach

### *Vaginal Discharge*

#### 1. Case History

#### 2. General Examination

#### 3. Analysis of the vaginal secretion

#### 4. Blood Tests

- Hct, Ery, Leuc
- TP, BG
- Urea, Crea
- Blood Sedimentation (BST)
- Diff BC

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]

#### 5. Urinalysis

- Urinary output/volume
- Urine dip stick
- Specific gravity
- Urine sediment

- Bacteria
- Erys, Leuc
- Epithelial cells
- Casts
- Crystals
- Tumour cytology
- Bacterial culture (Cystocentesis)

#### 6. Ultrasound

- Abdomen

#### 7. X-Ray Study

- Abdomen

#### 8. Endoscopy

- Vaginoscopy
- ± Vaginal smear
  - Cytology
  - Bacterial culture

#### 9. Further Tests

- Laparotomy/Ovario-hysterectomy

## Vaginal Prolapse

Bulging or falling of the vagina and its nearby structures out of its usual position

### Common Causes

Dog	Cat
+++ Genetic predisposition	+
++ Ovarian cysts	+
++ Ovarian tumours	
+ Intra partum with uterine prolapse	

### Causes

- Endogenous oestrogen
  - Proestrus/oestrus
  - Ovarian cysts
  - Ovarian tumours
  - End of pregnancy
- Exogenous oestrogen
  - Oestrogen therapy
  - Toxic plants
- Vaginal tumours
  - Canine transmissible venereal tumour [Dog]
  - Leiomyoma
  - Polyp
- Genetic family related breed predisposition [Dog]
- Intra partum with uterine prolapse

### Diagnostic Approach

#### *Vaginal Prolapse*

- 1. Case History**
- 2. General Examination**
- 3. Endoscopy**

- Vaginoscopy
- ± Tumour biopsy
- Cytology

## Abnormal Cycle

Normal Cycle:	Dog	Cat
<b>Proestrus:</b>	7–9 days	1–2 days
<b>Oestrus:</b>	4–8 days	ca. 6 days (with coitus) 14–21 days (without coitus)
<b>Metoestrus:</b>	4–6 weeks	
<b>Anoestrus:</b>	variable (3–5 months)	
<b>Cycle length:</b>	14–21 days	14–21 days
<b>Interoestrus:</b>	variable (ca. 7 months)	variable

### Oestrus

#### Prolonged Oestrus

- Endogenous oestrogen
  - Ovarian cysts
  - Ovarian tumours
- Exogenous oestrogen
  - Synthetic oestrogens
  - Toxic plants

#### Absent Oestrus

- Error of observation
- Ovariectomy/  
Ovariohysterectomy
- Silent heat
- Split oestrus [Dog]
- Immature/old age
- Ovarian dysfunction
- Hypothyroidism [Dog]
- Hypercortisolism (Cushing's  
Disease) [Dog]
- Systemic Disease
- Shortened photoperiod [Cat]
- Chromosomal defects
- Drugs

### Interoestrus

#### Prolonged Interoestrus

- Pregnancy
- Pseudopregnancy [esp Dog]
- Malnutrition
- Glandular cystic endometrial  
hyperplasia [Dog]
- Old age
- Hypothyroidism [Dog]
- Hypercortisolism (Cushing's  
Disease) [Dog]
- Systemic Disease
- Shortened photoperiod [Cat]

#### Shortened Interoestrus

- Endogenous oestrogen
  - Ovarian cysts/tumours
- Exogenous oestrogen
  - Synthetic oestrogens
  - Toxic plants
- Split oestrus [Dog]
- Corpus luteum dysfunction  
(Luteolysis)

## Diagnostic Approach

### *Abnormal Cycle*

#### **1. Case History**

#### **2. General Examination**

#### **3. Endoscopy**

- Vaginoscopy
- ± Vaginal smear
  - Cytology
  - Bacterial culture

#### **4. Blood Tests**

- Hct, Ery, Leuc
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- Diff BC
- Na, K, Ca
- FIP Profile [Cat]
  - TP
  - Alb/Glob ratio
  - Bili
  - GOT
  - Serum electrophoresis

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Brucella Antibodies [Dog]
- Toxoplasma Antibodies

#### **FUNCTION TESTS**

- Serum progesterone
- Serum oestradiol
- T<sub>4</sub>, fT<sub>4</sub>
- TSH-/TRH Stimulation test [Dog]
- Adrenal gland function test [Dog]
  - Dexamethasone Suppression test
  - ACTH Stimulation test
  - Cortisol/Creatinine Ratio

#### **5. Urinalysis**

- Urine dip stick
- Specific gravity
- Urine sediment

#### **6. Ultrasound**

- Abdomen

# 7 Neurological Principal Symptoms

---

Ataxia .....	184
Hearing Loss/Deafness .....	191
Coma .....	193
Head Tilt .....	196
Nystagmus .....	199
Seizures .....	200
Paralysis .....	204
Tremor .....	212

## Further Relevant Principal Symptoms

Sleep Disturbances (Ch. 1: General Symptoms) .....	
Syncope (Ch. 2: Cardiovascular Principal symptoms) .....	
Faecal incontinence (Ch. 4: Gastrointestinal Principal Symptoms) .....	
Urinary incontinence (Ch. 5: Urological Principal Symptoms) .....	
Loss of Eyesight/Blindness (Ch. 9: Ophthalmological Principal Symptoms) .....	
Behavioural Disorders (Ch. 13: Behavioural Disorders) .....	

## Ataxia

### Coordination Disorder of Motion Sequences:

- ± Hypermetria + broad legged posture + intention tremor  
(cerebellar cause likely)
- ± Head tilt + nystagmus + circling movements (vestibular cause  
likely)
- ± Paresis (central or spinal cause likely)
- ± Hind limb weakness (metabolic causes, heart failure or  
neuromuscular causes likely)

<b>Common Causes</b>	
Dog	Cat
+++ Peripheral vestibular disorder	+++ Peripheral vestibular disorder
++ Metabolic causes	++ Metabolic causes
++ Spinal causes	++ Spinal causes
++ Cerebral causes	++ Cerebral causes
++ Neuromuscular causes	++ Neuromuscular causes

## Peripheral Vestibular Disorder

### Otitis media/interna

- Parasitic Otitis
  - Otodectes sp.
  - Notoedres sp. [Cat]
  - Demodex sp.
  - Sarcoptes sp.
- Bacterial Otitis
  - Staphylococcus sp.
  - Proteus sp.
  - Pseudomonas sp.
  - Lyme Borreliosis sp. [Dog]
- Mycotic Otitis
  - Malassezia sp.
  - Candida sp.
  - Aspergillus sp.
- Viral Otitis
  - Canine Distemper Virus [Dog]
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
  - Herpes virus
- Immunoreactive otitis
  - Atopy/Inhalation allergy
  - Ear mite allergy
  - Bacterial allergy
  - Fungal allergy
  - Drug allergy (Neomycin ear ointments)

- Toxic causes
  - Aminoglycosides
  - Polymyxin B
  - Chloramphenicol
  - Diuretics
  - Cytostatics
  - Heavy metal poisoning
- Other causes
  - Foreign body
  - Trauma
  - Polyps [Cat]
  - Rhinitis

### Middle Ear Tumours

- Middle ear polyps [Cat]
- Osteosarcoma
- Chondrosarcoma
- Fibrosarcoma
- Squamous cell carcinoma
- Vestibular Schwannoma
- Cholesteatoma
- Vestibulocochlearis neurinoma

### Other Causes

- Vestibular circulatory disorder
- Geriatric vestibular syndrome
- Traumatic cause
  - Fracture of the petrous part in the temporal bone
  - Labyrinth contusion

- Polyneuropathy
  - esp hypothyroidism [Dog]

## Central Vestibular Disorder

### Congenital Causes

- Hydrocephalus
- Lissencephaly
- Lysosomal storage disease
- Degenerative encephalopathies
  - Dysmyelogenesis

### Encephalitis/ Meningoencephalitis

- Viral encephalitis
  - (Rabies virus)
  - Pseudorabies Herpes virus
  - Canine distemper virus [Dog]
  - CAV-1 (Hepatitis c. c.) [Dog]
  - Canine/feline Herpesvirus
  - Canine/feline Parvovirus
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
  - TBE Virus [Dog]
- Bacterial encephalitis
  - Lyme Borreliosis sp. [Dog]
  - Listeria sp. [Dog]
  - Aerobes + Anaerobes  
(Peripheral primary source of infection)
- Immunoreactive encephalitis
  - Granulomatous meningoencephalitis (GME)
  - Eosinophilic meningoencephalitis (EME)
- Parasitic encephalitis
  - Toxoplasma sp.

- Neospora sp. [Dog]
- (Encephalitozoon sp. [Dog])
- Larva migrans
- Toxocara sp.
- Ancylostoma sp.
- (Dirofilaria sp.)
- Rickettsial encephalitis
  - (Ehrlichia sp. [Dog])
  - (Rickettsia sp. [Dog])
- Mycotic encephalitis
  - Cryptococcus sp. [Cat]
  - Aspergillus sp. [Dog]
  - (Histoplasma sp.)
  - (Blastomyces sp.)
  - (Coccidioides sp.)
- Other causes
  - Feline spongiform encephalopathy [Cat]
  - Feline polioencephalomyelitis [Cat]
  - Foreign body/abscess

### Brain tumour/Tumour metastasis

- Lymphosarcoma [esp Cat]
- Meningeoma [esp Cat]
- Neurinoma
- Glioma
- Medulloblastoma
- Plexus chorioideus papilloma
- Neuroblastoma

### Other Causes

- Traumatic brain injury
- Cerebral circulatory disturbance
- Thiamine deficiency [Cat]

## Cerebellar Causes

### Cerebellar/Brain Stem Disease

- Cerebellar hypoplasia
  - Feline Parvovirus (in utero) [Cat]
  - Canine Herpes virus (in utero) [Dog]
  - (live vaccine)
- Cerebellitis
  - FIP Coronavirus [Cat]
  - Canine distemper virus [Dog]
  - Toxoplasma sp.
  - Neospora sp. [Dog]
  - Cryptococcus sp. [Cat]
  - Granulomatous Meningoencephalitis (GME)
- Cerebellar/brain stem tumours/tumour metastasis
  - Medulloblastoma
  - Lymphosarcoma [esp Cat]
- Cerebellar degeneration
  - Cerebellar abiotrophy
  - Lysosomal storage disease
  - Neuroaxonal dystrophy
  - Dysmyelogenesis
  - White Dog Shaker Syndrome [Dog]
- Toxic causes
  - Hexachlorophen poisoning
  - Heavy metal poisoning
  - Organophosphate poisoning
- Traumatic brain injury
- Cerebellar circulatory disturbance
- Thiamine deficiency [Cat]

## Spinal Disease

### Traumatic Causes

- Prolapsed disc
- Vertebral fracture/luxation
- Haematoma/haemorrhage
- Fibrocartilaginous embolism
- Thromboembolism

### Congenital Causes

- Cervical instability (Wobbler Syndrome) [Dog]
- Lumbosacral stenosis (Cauda equina syndrome)
- Atlantoaxial subluxation [Dog]
- Spinal deformations [esp Bulldog]

### Infectious Causes

- Discospondylitis/Osteomyelitis
  - Staphylococcus sp.
  - Brucella sp. [Dog]
  - Streptococcus sp.
  - E. coli
  - Pasteurella sp.
  - Actinomyces sp.
  - Nocardia sp.
  - Mycobacterium sp.
  - Aspergillus sp.
- Myelitis
  - Canine distemper virus [Dog]
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
  - Rabies virus
  - Staphylococcus sp.
  - Lyme Borreliosis sp. [Dog]
  - Cryptococcus sp. [Cat]
  - Toxoplasma sp.
  - Neospora sp. [Dog]

- Larva migrans
- (Ehrlichia sp. [Dog])

### **Immunoreactive Causes**

- Granulomatous meningoencephalitis (GME)
- Eosinophilic meningoencephalitis (EME)

### **Degenerative Causes**

- Demyelinisation diseases [German Shepherd Dog]
- Prolapsed disc
- Lumbosacral stenosis (Cauda equina syndrome)
- Spondylosis deformans
- Dura-mater ossification

### **Spinal tumour**

- Osteosarcoma
- Chondrosarcoma
- Multiple myeloma
- Tumour metastasis

### **Other Causes**

- Hypervitaminosis A [Cat]

## **Neuromuscular Causes**

### **Polyneuropathy**

- Infectious Causes
  - FeLV/FIV [Cat]
  - Toxoplasma sp.
  - Neospora sp. [Dog]
- Immunoreactive causes
  - Lupus erythematosus
- Metabolic Causes
  - Diabetes mellitus

- Hypercortisolism (Cushing's disease) [esp Dog]
- Hypothyroidism [Dog]
- Toxic Causes
  - Organophosphate poisoning (chronic)
  - Lead poisoning
  - Cytostatics
  - Lindane
  - Botulinum toxin
  - Tick toxin (Tick paralysis)
- Congenital Causes
  - Axonopathy
  - Demyelinisation diseases
  - Lysosomal storage disease
  - Spinal muscular atrophy
- Other Causes
  - Nerve root compression syndrome
  - Feline dysautonomia [esp Cat]
  - Polyneuritis/ Polyradiculoneuritis [Dog]
  - Tetanus

### **Junctionopathy (Neuromuscular Endplate)**

- Myasthenia gravis
  - acquired
  - congenital

### **Polymyopathy**

- Infectious Causes
  - Toxoplasma sp.
  - Neospora sp. [Dog]
  - Lyme Borrelia sp. [Dog]
  - Leptospira sp. [Dog]
- Immunoreactive Causes
  - Lupus erythematosus
  - Eosinophilic myositis [Dog]

- Metabolic Causes
  - Hypokalaemia [esp Cat]
  - Hypercortisolism (Cushing's Disease) [esp Dog]
  - Hypothyroidism [Dog]
  - Hypoglycaemia
  - Vitamin E/Selenium deficiency
- Congenital Causes
  - Muscular dystrophy
  - Dermatomyositis [Collie]
  - Glycogen storage disease
- Heart failure
- Hepatic failure
- Renal failure
- Respiratory disease
- Metabolic Causes
  - Hypoglycaemia
  - Uraemia
  - Hepatoencephalopathy
  - Hypokalaemia
  - Hypocalcaemia
  - Metabolic acidosis
  - (Thiamine deficiency [Cat])
- Anaemia
- Bone/Joint disease
- Drugs
  - Sedatives/Narcotics
  - Antihistamines
  - Anticonvulsants

## Other Causes of Ataxia

- Feline aortic thromboembolism [Cat]
- Organ failure

## Diagnostic Approach

### Ataxia

#### 1. Case History

#### 2. General Examination

#### 3. Neurological Examination

- Awareness/Behaviour
- Body and limb posture/ stance
- Locomotion
- Muscle tone/strength
- Cranial nerves
  - Facial symmetry (VII)
  - Facial sensation (V)
  - Menace reflex (II, VII)
  - Blink reflex (V, VII)
  - Corneal reflex/ Eye movement (V, VI, VII/III, IV, VI)

- Pupillary reflex (III, Sympathetic nerve)
- Sight test (II)
- Swallowing reflex/Glossal motor function (X, XI, XII/XII)
- Sense of smell/taste/hearing (I/V/VIII)
- Cervical and shoulder muscles/(XI)
- Spinal reflexes
  - Bicipital reflex (C6–C8)
  - Triceps reflex (C7–T1)
  - Patellar reflex (L4–L6)
  - Withdrawal reflex (C6–T1 and L6–S1)

- Cutaneous trunci reflex (C7-T1)
- Anal sphincter reflex (S1-S3)
- Bladder – can it be expressed?
- Positional and postural reaction
  - Correction reaction
  - Hopping reaction
  - Side stepping reaction
  - Wheelbarrowing reaction
  - Righting reaction (hind limb)/Extensor postural thrust reaction
  - Righting reaction (fore limb)
  - Table edge reaction (visual/tactile)

#### **4. Examination of the Ear**

- Otoscopy

#### **5. Blood Tests**

- Hct, Ery, Leuc, Hb
- Na, K, Ca
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- FIP Profile [Cat]
  - TP
  - Alb/Glob ratio
  - Bili
  - GOT
  - Serum electrophoresis
- Diff BC
- Thrombocytes
- Insulin  
(Insulin/Glucose ratio)

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Toxoplasma Antibodies
- Ehrlichia Antibodies [Dog]
- Neospora Antibodies [Dog]

#### **FUNCTION TESTS**

- T<sub>4</sub>
- TSH-/TRH Stimulation test [Dog]

#### **6. Urinalysis**

- Urinary output/volume
- Urine dip stick
- Specific gravity
- Urine sediment
  - Bacteria
  - Erythrocytes, Leucocytes
  - Epithelial cells
  - Casts
  - Crystals
  - Tumour cytology
- Bacterial culture (Cystocentesis)

#### **7. X-Ray Study**

- Skull (Tympanic bulla)
- Spine ± Myelography

#### **8. Liquor Examination**

- Chemistry
  - TP, Glucose, CK
  - Globulin (Pandy and Nonne-Apelt reaction)
- Electrophoresis
- Cytology
- Bacterial/Fungal culture
- Canine distemper antibodies [Dog]
- Liquor pressure

#### **9. Further Tests**

- Skull CT/MRT
- Electromyography (EMG)
- Muscle biopsy
- Canine distemper virus antigen [Dog] (Conjunctival smear)

## Hearing Loss/Deafness

### Surdity

Common Causes	
Dog	Cat
+++ Geriatric hearing loss	+++ Geriatric hearing loss
++ Otitis media/interna	++ Otitis media/interna
++ Congenital deafness	++ Congenital deafness

### Hearing Loss

#### Otitis Media/Interna

- Parasitic Otitis
  - Otodectes sp.
  - Notoedres sp. [Cat]
  - Demodex sp.
  - Sarcoptes sp.
- Bacterial Otitis
  - Staphylococcus sp.
  - Proteus sp.
  - Pseudomonas sp.
  - Lyme Borrelia sp. [Dog]
- Mycotic Otitis
  - Malassezia sp.
  - Candida sp.
  - Aspergillus sp.
- Viral Otitis
  - Canine distemper virus [Dog]
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
  - Herpes virus
- Immunoreactive Otitis
  - Atopy/Inhalation allergy
  - Ear mite allergy
  - Bacterial allergy

- Fungal allergy
- Drug allergy (Neomycin ear ointment)
- Toxic Causes
  - Aminoglycosides
  - Polymyxin B
  - Chloramphenicol
  - Diuretics
  - Cytostatics
  - Heavy metal poisoning
- Other Causes
  - Foreign body
  - Trauma
  - Polyps [Cat]
  - Rhinitis

#### Middle Ear Tumours

- Middle ear polyps [Cat]
- Osteosarcoma
- Chondrosarcoma
- Fibrosarcoma
- Squamous cell carcinoma
- Vestibular Schwannoma
- Cholesteatoma
- Vestibulocochlearis neurinoma

## Congenital Causes

- Hydrocephalus
- Blue eyed cats with white fur
- Congenital deafness in Dalmatians

## Other Causes

- Geriatric hearing loss
- Traumatic brain injury
- Encephalitis/  
Meningoencephalitis

## Diagnostic Approach

### Hearing Loss/Deafness

#### 1. Case History

#### 2. General Examination

#### 3. Neurological Examination

- Awareness/Behaviour
- Body and limb position/ posture
- Locomotion
- Cranial nerves
  - Facial symmetry (VII)
  - Facial sensation
  - Menace reflex (II, VII)
  - Blink reflex (V, VII)
  - Corneal reflex/ Eye movement (V, VI, VII/III, IV, VI)
  - Pupillary reflex (III, Sympathetic nerve)
  - Sight test (II)
  - Swallowing reflex/glossal motor function (X, XI, XII/ XII)
  - Sense of smell/taste and hearing (I/V/VIII)
  - Cervical and shoulder muscles (XI)

#### 4. Examination of the Ear

- Otoscopy
- Hearing Test

#### 5. Blood Tests

- Hct, Ery, Leuc, Hb
- FIP Profile [Cat]
  - TP
  - Alb/Glob Ratio
  - Bili
  - GOT
  - Serum electrophoresis

#### MICROBIAL SEROLOGY

- FeLV-/FIV Antigen [Cat]
- X-Ray Study
- Skull (Tympanic bulla)

#### 7. Further Tests

- Brain auditor evoked response Audiometry (BAERA)
- Canine distemper virus antigen (Conjunctival smear) [Dog]

## Coma

**Deep unconsciousness:** Patient cannot be awoken by external stimuli

### Common Causes

Dog	Cat
+++ Metabolic causes	+++ Metabolic causes
++ Traumatic brain injury	++ Traumatic brain injury
++ Poisoning	++ Poisoning
+ Encephalitis/ meningoencephalitis	+ Encephalitis/ meningoencephalitis
+ Brain tumour	+ Brain tumour

### Cerebral Causes

#### Traumatic Causes

- Intracerebral haemorrhage/  
haematoma (subdural/epidural)
- Cerebral contusion
- Cerebral oedema
- Thromboembolism  
(Hemispherical infarction)

#### Congenital Causes

- Hydrocephalus
- Lissencephaly
- Lysosomal storage disease

#### Brain Tumours/Tumour Metastasis

- Lymphosarcoma [esp Cat]
- Meningeoma
- Neurinoma
- Glioma
- Medulloblastoma
- Plexus chorioideus papilloma

- Neuroblastoma

#### Other Causes

- Seizures (postictal coma)
- Heat stroke
- Cerebral circulatory  
disturbance (hypoxia)
- Thiamine deficiency [Cat]

#### Encephalitis/ Meningoencephalitis

- Viral encephalitis
  - (Rabies virus)
  - Pseudorabies Herpes virus
  - Canine distemper virus  
[Dog]
  - CAV-1 (Hepatitis c. c.)  
[Dog]
  - Canine/feline Herpes virus
  - Canine/feline Parvovirus
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
  - TBE Virus [Dog]

- Bacterial encephalitis
  - Lyme Borrelia sp. [Dog]
  - Listeria sp. [Dog]
  - Aerobes + Anaerobes (peripheral source of infection)
- Parasitic encephalitis
  - Toxoplasma sp.
  - Neospora sp. [Dog]
  - (Encephalitozoon sp. [Dog])
  - Larva migrans
  - Toxocara sp.
  - Ancylostoma sp.
  - (Dirofilaria sp.)
- Immunoreactive encephalitis
  - Granulomatous meningoencephalitis (GME)
  - Eosinophilic meningoencephalitis (EME)
- Rickettsial encephalitis
  - (Ehrlichia sp. [Dog])
  - (Rickettsia sp. [Dog])
- Mycotic encephalitis
  - Cryptococcus sp. [Cat]
  - Aspergillus sp. [Dog]
  - (Histoplasma sp.)
  - (Blastomyces sp.)
  - (Coccidioides sp.)
- Other causes
  - Feline spongiform encephalopathy [Cat]
  - Feline polioencephalomyelitis [Cat]
  - Foreign body/abscess
- Hyperglycaemia (Diabetes mellitus)
- Uraemia
- Hepatoencephalopathy (liver cirrhosis, portacaval shunt)
- Acidosis/Alkalosis
- Hypoxia
- Hypernatraemia
- Hyperosmolality/Hyperviscosity syndrome
- Hypocortisolism (Addison's Disease) [Dog]
- Hypothyroidism [Dog]
- Hyperlipidaemia

### Toxic Causes

- Narcotics
- Antiectoparasitics
  - Ivermectin
  - Amitraz
- Theophylline
- Phenytoin/Phenobarbital
- Paracetamol
- Metaldehyde poisoning (slug pellets)
- Heavy metal poisoning
- Household agents
- Toxic plants

### Other Causes

- Anaemia/Methaemoglobinæmia
- Shock
- Anaesthetic incident (hypoxia)
- Cardiac/respiratory disease (hypoxia)
- Hypertension/Hypotension
- Hyperthermia/Hypothermia
- Haemorrhage

## Extracerebral Causes

### Metabolic Causes

- Hypoglycaemia (Insulinoma)

## Diagnostic Approach

### *Coma*

#### 1. Case History

#### 2. General Examination

#### 3. Neurological Examination

- Arousal
- Body/limb position
- Muscle tone
- Cranial nerves
  - Corneal reflex/ eye movement (V, VI, VII/III, IV, VI)
  - Pupillary reflex (III, Sympathetic nerve)
  - Swallowing reflex/glossal motor function (X, XI, XII/XII)
- Spinal reflexes
  - Bicipital reflex (C6–C8)
  - Triceps reflex (C7–T1)
  - Patellar reflex (L4–L6)
  - Withdrawal reflex (C6–T1 and L6–S1)
  - Cutaneous trunci reflex (C7–T1)
  - Anal sphincter reflex (S1–S3)
  - Bladder – can it be expressed?

#### 4. ECG

#### 5. Blood Tests

- Hct, Ery, Leuc, Hb
- Thrombocytes
- Na, K, Ca
- TP, Alb, Glob
- GPT, AP, Urea, Creatinine
- BG, Insulin (Insulin/Glucose)
- Ammonium
- Blood gas analysis (BGA)

- FIP Profile [Cat]
  - TP
  - Alb/Glob ratio
  - Bili
  - GOT
  - Serum electrophoresis
- Diff BC

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Coronavirus Antibodies/PCR [Cat]
- Toxoplasma Antibodies
- Ehrlichia Antibodies [Dog]
- Cryptococcus Antibodies [Cat]
- Lyme Borrelia Antibodies [Dog]
- Neospora Antibodies [Dog]

#### **FUNCTION TESTS**

- T<sub>4</sub>, fT<sub>4</sub>

#### **COAGULATION**

- Bleeding time
- Prothrombin time (PT/Quick)
- (Activated) partial Thromboplastin time (PTT/aPTT)
- Fibrin Degradation product (FDP)

#### 6. Urinalysis

- Urinary output/volume
- Urine dip stick
- Specific gravity
- Urine sediment
  - Bacteria
  - Erythrocytes, Leucocytes
  - Epithelial cells
  - Casts

## Head Tilt

Often indicates a balance disorder (vestibular disturbance) ± nystagmus  
Head tilt usually towards the affected side

Common Causes	
Dog	Cat
+++ Peripheral vestibular disturbance	+++ Peripheral vestibular disturbance
++ Central vestibular disturbance	++ Central vestibular disturbance

## Peripheral Vestibular Disturbance

### Otitis Media/Interna

- Parasitic otitis
    - Otodectes sp.
    - Notoedres sp. [Cat]
    - Demodex sp.
    - Sarcoptes sp.
  - Bacterial otitis
    - Staphylococcus sp.
    - Proteus sp.
    - Pseudomonas sp.
- Lyme Borrelia sp. [Dog]
  - Mycotic otitis
    - Malassezia sp.
    - Candida sp.
    - Aspergillus sp.
  - Viral otitis
    - Canine distemper virus [Dog]
    - FeLV/FIV [Cat]
    - FIP Coronavirus [Cat]
    - Herpes virus
  - Immunoreactive otitis
    - Atopy/Inhalation allergy

- Ear mite allergy
- Bacterial allergy
- Fungal allergy
- Drug allergy (Neomycin ear ointment)
- Toxic Causes
  - Aminoglycosides
  - Polymyxin B
  - Chloramphenicol
  - Diuretics
  - Cytostatics
  - Heavy metal poisoning
- Other causes
  - Foreign body
  - Trauma
  - Polyps [Cat]
  - Rhinitis

## Middle Ear Tumours

- Middle ear polyps [Cat]
- Osteosarcoma
- Chondrosarcoma
- Fibrosarcoma
- Squamous cell carcinoma
- Vestibular Schwannoma
- Cholesteatoma
- Vestibulocochlear neurinoma

## Other Causes

- Vestibular circulatory disturbance
- Geriatric vestibular syndrome
- Traumatic causes
  - Fracture of the petrous bone
  - Contusion of the labyrinth
- Polyneuropathy
  - Esp hypothyroidism [Dog]

## Central Vestibular Disturbance

### Congenital Causes

- Hydrocephalus
- Lissencephaly
- Lysosomal storage disease
- Degenerative encephalopathies
  - Dysmyelogenesis

### Encephalitis/ Meningoencephalitis

- Viral encephalitis
  - (Rabies virus)
  - Pseudo rabies Herpes virus
  - Canine distemper virus [Dog]
  - CAV-1 (Hepatitis c. c.) [Dog]
  - Canine/feline Herpes virus
  - Canine/feline Parvovirus
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
  - TBE Virus [Dog]
- Bacterial encephalitis
  - Lyme Borrelia sp. [Dog]
  - Listeria sp. [Dog]
  - Aerobes + Anaerobes (peripheral source of infection)
- Immunoreactive encephalitis
  - Granulomatous meningoencephalitis (GME)
  - Eosinophilic meningoencephalitis (EME)
- Rickettsial encephalitis
  - (Ehrlichia sp. [Dog])
  - (Rickettsia sp. [Dog])
- Mycotic encephalitis
  - Cryptococcus sp. [Cat]
  - Aspergillus sp. [Dog]

- (Histoplasma sp.)
- (Blastomyces sp.)
- (Coccidioides sp.)
- Parasitic encephalitis
  - Toxoplasma sp.
  - Neospora sp. [Dog]
  - (Encephalitozoon sp. [Dog])
  - Larva migrans
  - Toxocara sp.
  - Ancylostoma sp.
  - (Dirofilaria sp.)
- Other Causes
  - Feline spongiform encephalopathy [Cat]
  - Feline polioencephalomyelitis [Cat]
  - Foreign body/abscess

## **Brain Tumours/Tumour Metastasis**

- Lymphosarcoma [esp Cat]
- Meningeoma
- Neurinoma
- Glioma
- Medulloblastoma
- Plexus chorioideus papilloma
- Neuroblastoma

## **Other Causes**

- Idiopathic vestibular syndrome
- Traumatic brain injury
- Cerebral circulatory disorder
- Thiamine deficiency [Cat]

## **Diagnostic Approach**

### **Head Tilt**

#### **1. Case History**

#### **2. General Examination**

#### **3. Neurological Examination**

- Awareness/behaviour
- Body/limb position and posture
- Locomotion
- Cranial nerves
  - Facial symmetry (VII)
  - Facial sensation
  - Menace reflex (II, VII)
  - Blink reflex (V, VII)
  - Corneal reflex/ Eye movements (V, VI, VII/III, IV, VI)
  - Pupillary reflex (III, Sympathetic nerve)
  - Sight test (II)

- Swallowing reflex/glossal motor function (X, XI, XII/XII)
- Sense of smell/taste/hearing (I/V/VIII)
- Cervical and shoulder muscles (XI)

#### **4. Examination of the Ear**

- Otoscopy
- ± Analysis of the aural discharge
- Bacterial/fungal culture

#### **5. Blood Tests**

- Hct, Ery, Leuc, Hb
- Na, K, Ca
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- FIP Profile [Cat]

- TP
- Alb/Glob ratio
- Bili
- GOT
- Serum electrophoresis
- Diff BC
- Thrombocytes
- Insulin (Insulin/Glucose ratio)

**MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Toxoplasma Antibodies
- Ehrlichia Antibodies [Dog]

**FUNCTION TESTS**

- T<sub>4</sub>
- TSH-/TRH Stimulation test [Dog]

**6. X-Ray Study**

- Skull (Tympanic bulla)
- Spine ± Myelography

**7. Liquor Examination**

- Chemistry
  - TP, Glucose, CK
  - Globulin (Pandy and Nonne-Apelt reaction)
- Electrophoresis
- Cytology
- Bacterial/fungal culture
- Canine distemper antibodies
- [Dog] (Liquor pressure)

**8. Further Tests**

Skull MRT

## Differentiation Parameters of the Pathological Nystagmus

Spontaneous Nystagmus	Peripheral vestibular disturbance	Central vestibular disturbance
<b>Horizontal Nystagmus</b>	+ – fast phase: Often towards the unaffected/ healthy side  Rarely towards affected/diseased side (irritative nystagmus)	+
<b>Rotating Nystagmus</b>	+	+
<b>Vertical Nystagmus</b>		+
<b>Periodic alternating Nystagmus</b>		+
<b>Positional Nystagmus</b> (exhaustible and reproducible)	+	

## Seizures

### Seizure Phases

1. Prodromal phase (early stage): often associated with unrest and clinginess
2. Ictus (main stage)
3. Postictal phase (late stage): often associated with unrest, disorientation, hunger/thirst, sleep

### Common Causes

Dog	Cat
Age: < 1 Year	
+++ Congenital Disease – Hydrocephalus – Portosystemic shunt	+++ Congenital Disease – Hydrocephalus – Portosystemic shunt
++ Meningoencephalitis – Canine distemper virus – Bacterial	++ Meningoencephalitis – FIP Coronavirus – Toxoplasma sp.
++ Hypoglycaemia	– (Cryptococcus sp.)
+ Trauma	– Bacterial
+ Poisoning	++ Hypoglycaemia + Trauma
Age: 1–5 Years	
+++ Idiopathic epilepsy	++ Meningoencephalitis
++ Poisoning	– FIP Coronavirus
++ Meningoencephalitis – Canine distemper virus – Bacterial – Granulomatous meningoencephalitis (GME)	– Toxoplasma sp. – (Cryptococcus sp.) – Bacterial – Granulomatous meningoencephalitis (GME)
++ Hypoglycaemia	++ Hypokalaemia
++ Uraemia	++ Uraemia
+ Trauma	++ Idiopathic epilepsy
+ Portosystemic shunt	++ Poisoning + Hypoglycaemia + Trauma

<b>Common Causes</b>	
<b>Dog</b>	<b>Cat</b>
<b>Age: &gt; 5 Years</b>	
+++ Brain tumour/tumour metastasis	+++ Brain tumour/tumour metastasis
++ Hypoglycaemia/insulinoma	++ Uraemia
++ Uraemia	++ Hepatoencephalopathy
++ Hepatoencephalopathy	+ Meningoencephalitis
+ Meningoencephalitis	– FIP Coronavirus
– Canine distemper virus	– Bacterial
– Bacterial	– Granulomatous
– Granulomatous	meningoencephalitis (GME)
meningoencephalitis (GME)	+ Hypoxia
+ Hypoxia	– Heart failure
– Heart failure	– Feline asthma
– Respiratory disease	– Anaemia
– Anaemia	

## Cerebral Causes

### Encephalitis/ Meningoencephalitis

- Viral encephalitis
  - Canine distemper virus [Dog]
  - CAV-1 (Hepatitis c. c.) [Dog]
  - Canine/feline Herpes virus
  - Canine/feline Parvovirus
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
  - FSME Virus [Dog]
- Bacterial encephalitis
  - Lyme Borrelia sp. [Dog]
  - Listeria sp. [Dog]
  - Aerobes + Anaerobes (peripheral source of infection)
- Immunoreactive encephalitis
  - Granulomatous meningoencephalitis (GME)
  - Eosinophilic meningoencephalitis (EME)
  - Rickettsial encephalitis
    - (Ehrlichia sp. [Dog])
    - (Rickettsia sp. [Dog])
  - Mycotic encephalitis
    - Cryptococcus sp. [Cat]
    - Aspergillus sp. [Dog]
    - (Histoplasma sp.)
    - (Blastomyces sp.)
    - (Coccidioides sp.)
  - Parasitic encephalitis
    - Toxoplasma sp.
    - Neospora sp. [Dog]
    - (Encephalitozoon sp. [Dog])
    - Larva migrans
    - Toxocara sp.
    - Ancylostoma sp.
    - (Dirofilaria sp.)

- Other Causes
  - Feline spongiform encephalopathy [Cat]
  - Feline polioencephalomyelitis [Cat]
  - Foreign body/abscess

### Traumatic Causes

- Intracerebral haemorrhage/haematoma (subdural/epidural)
- Cerebral contusion
- Cerebral oedema
- Thromboembolism
- (Hemispherical infarction)

### Congenital Causes

- Hydrocephalus
- Lissencephaly
- Lysosomal storage disease

### Brain Tumours/Tumour Metastasis

- Lymphosarcoma [esp Cat]
- Meningeoma
- Neurinoma
- Glioma
- Medulloblastoma
- Corioidal plexus papilloma
- Neuroblastoma

### Other Causes

- Cerebral circulatory disturbances
  - Hypoxia (esp heart/ respiratory tract disease)
  - Anaemia
  - Thrombo-/fat-/tumour embolism
  - Atherosclerosis

- Feline ischaemic encephalopathy [Cat]
- Heat stroke

## Extracerebral Causes

### Metabolic Causes

- Hypoglycaemia
- Uraemia
- Hepatoencephalopathy (esp hepatic cirrhosis, portosystemic shunt)
- Diabetic ketoacidosis
- Hypocalcaemia (eclampsia)
- Hypokalaemia [esp Cat]
- Hyperviscosity syndrome
- Hyper-/Hyponatraemia
- Thiamine deficiency [Cat]

### Toxic Causes

- Drugs
  - Ketamine
  - Lidocaine
  - Pentetrazol
  - Caffeine [Cat]
  - Theophylline/Theobromine
  - Acetylsalicylic acid [Cat]
  - Paracetamol [Cat]
  - Tricyclic antidepressants
  - Cytostatics
  - Antiparasitics
- Poisonings
  - Organophosphates (insecticides)
  - Metaldehyde (slug pellets)
  - Strychnine
  - Ethylene glycol (antifreeze)
  - Phenol (Household detergents)
  - Heavy metals
  - Toxic plants

## Diagnostic Approach

### *Seizures*

- 1. Case History**
- 2. General Examination**
- 3. Neurological Examination**

- (changes possible in postictal phase or during anticonvulsant therapy)
- Awareness/behaviour
  - Body/limb position and posture
  - Locomotion
  - Muscle tone
  - Cranial nerves
    - Facial symmetry (VII)
    - Facial sensation (V)
    - Menace reflex (II, VII)
    - Blink reflex (V, VII)
    - Corneal reflex/ eye movement (V, VI, VII/III, IV, VI)
    - Pupillary reflex (III, Sympathetic system)
    - Sight test (II)
    - Swallowing reflex/glossal motor function (X, XI, XII/XII)
    - Sense of smell/taste/hearing (I/V/VIII)
    - Cervical/shoulder muscles (XI)
  - Spinal reflexes
    - Bicipital reflex (C6–C8)
    - Triceps reflex (C7–T1)
    - Patellar reflex (L4–L6)
    - Withdrawal reflex (C6–T1 and L6–S1)
    - Cutaneous trunci reflex (C7–T1)

- Anal sphincter reflex (S1–S3)
- Bladder – can it be expressed?
- Positional and postural reaction
  - Correction reaction
  - Hopping reaction
  - Side stepping reaction
  - Wheelbarrowing reaction
  - Righting reaction (hind limb)/ Extensor postural thrust reaction
  - Righting reaction (fore limb)
  - Table edge reaction(visual/tactile)

- 4. Ocular Examination**

- Ophthalmoscopy (Ocular fundus)

- 5. Blood Tests**

- Hct, Ery, Leuc, Hb
- Na, K, Ca
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- Ammonium
- FIP Profile [Cat]
  - TP
  - Alb/Glob ratio
  - Bili
  - GOT
  - Serum electrophoresis
- Therapeutic control
  - Phenobarbital
  - Potassium bromide
- Diff BC
- Thrombocytes
- Insulin (Insulin/Glucose ratio)

**MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Toxoplasma Antibodies
- Ehrlichia Antibodies [Dog]
- Neospora Antibodies [Dog]
- Lyme Borrelia Antibodies [Dog]
- Cryptococcus Antibodies [Cat]

**FURTHER SEROLOGY**

- Serum led
- Serum acetylcholinesterase

**6. Urinalysis**

- Urinary output/volume
- Urine dip stick
- Specific gravity
- Urine sediment
  - Bacteria
  - Erythrocytes, leucocytes
  - Epithelial cells
  - Casts
  - Crystals
  - Tumour cytology
- Bacterial culture (Cystocentesis)

**7. X-Ray Study**

- Thorax
- Abdomen
- Skull

**8. Liquor Examination**

- (postictal changes possible)
- Chemistry
    - TP, Glucose, CK
    - Globulin (Pandy and Nonne-Apelt reaction)
  - Electrophoresis
  - Cytology
  - Bacterial/fungal culture
  - Canine distemper Antibodies [Dog]
  - (Liquor pressure)

**9. Further Tests**

- Skull MRT
- Electroencephalography (EEG)
- Canine distemper virus antigen [Dog] (conjunctival smear)

## Paralysis

**Paresis:** Incomplete loss of muscle function

**Paralysis/Paraplegia:** Complete loss of muscle function

### Monoparesis (One Fore Limb)

### LMN signs (Flaccid Paresis)

- Muscle tone: flaccid
- Muscle strength: ↓
- Muscle fasciculations: present
- Muscle atrophy: early
- Bicipital reflex: ↓

- Triceps reflex: ↓
- Withdrawal reflex: ↓

### Causes

- Ventral nerve root lesion
  - Incarceration (compression syndrome)
  - Trauma

- Tumours
- Abscess/haematoma
- Brachial plexus lesion
  - Trauma (avulsion)
  - Tumours
  - Abscess/haematoma
- Peripheral nerve lesion

## Monoparesis (One Hind Limb)

### LMN Signs (flaccid paresis)

- Muscle tone: flaccid
- Muscle strength: ↓
- Muscle fasciculations: present
- Muscle atrophy: early
- Patellar reflex: ↓
- Withdrawal reflex: ↓

### Causes

- Lumbosacral spinal lesion (L4–S3)
  - Lateral disc prolapse
  - Fibrocartilaginous embolism
- Ventral nerve root lesion
  - Incarceration (compression syndrome)
  - Trauma
  - Tumours
  - Abscess/haematoma
- Thromboembolism of the femoral artery
- Peripheral nerve lesion

## Paraparesis (Both Hind Limbs)

### UMN Signs (Spastic Paresis)

- Muscle tone: spastic
- Muscle strength: normal to ↑
- Muscle fasciculations: absent
- Muscle atrophy: late

- Patellar reflex: normal to ↑
- Withdrawal reflex: normal to ↑
- Anal sphincter reflex: normal to ↑
- Tail wagging: normal to ↑  
Bladder – can it be expressed?  
Usually difficult
- Cutaneous trunci reflex:  
Absent caudal of the lesion

### Causes

- Thoracolumbar spinal chord lesion (L4–S3)

#### Traumatic causes

- Disc prolapse
- Vertebral fracture/luxation
- Haemorrhage/haematoma
- Fibrocartilaginous embolism
- Thromboembolism

#### Congenital Causes

- Deformations of the vertebral spine
- Meningocele
- Globoid cells  
Leucodystrophy (Terrier)

#### Infectious Causes

- Discospondylitis/  
Osteomyelitis
- Abscess
- Myelitis

#### Immunoreactive Causes

- Granulomatous  
meningoencephalitis

#### Degenerative Causes

- Spondylosis deformans
- Lumbosacral stenosis  
(Cauda equina syndrome)  
[Dog]
- Dura-mater ossification

**Tumours/Tumour****metastasis**

- Lymphosarcoma [esp Cat]
- Osteosarcoma
- Chondrosarcoma
- Multiple myeloma

**Other Causes**

- Hypervitaminosis A [Cat]

**LMN Signs (Flaccid Paresis)**

- Muscle tone: flaccid
- Muscle strength: ↓
- Muscle fasciculations: present
- Muscle atrophy: early
- Patellar reflex: ↓
- Withdrawal reflex: ↓
- Anal sphincter reflex: ↓
- Tail wagging: ↓
- Bladder – can it be expressed?  
Usually easily

**Causes**

- Lumbosacral spinal lesion (L4–S3)

**Traumatic Causes**

- Disc prolapse
- Vertebral fracture/luxation
- Haemorrhage/haematoma
- Fibrocartilaginous embolism
- Thromboembolism

**Congenital Causes**

- Deformations of the vertebral spine
- Meningocele

**Infectious Causes**

- Discospondylitis/  
osteomyelitis
- Abscess
- Myelitis

**Immunoreactive Causes**

- Granulomatous meningoencephalitis

**Degenerative Causes**

- Spondylosis deformans
- Lumbosacral stenosis (Cauda equina syndrome) [Dog]
- Dura-mater ossification

**Tumours/Tumour****metastasis**

- Lymphosarcoma [esp Cat]
- Osteosarcoma
- Chondrosarcoma
- Multiple myeloma

**Other Causes**

- Hypervitaminosis A [Cat]
- Feline aortic thromboembolism [Cat]
- Polyneuropathy
- Polymyopathy

**Schiff-Sherrington Phenomenon**

- Muscle tone: Fore limb/  
neck: Hyperextension Hind  
limb: spastic (UMN) to flaccid  
(LMN) paresis

**Causes**

- Thoracolumbar spinal lesion (T2–L2)

**Traumatic Causes**

- Vertebral fracture/luxation
- Disc prolapse

**Tetraparesis (Both Fore Limbs/  
Both Hind Limbs)****UMN Signs (Spastic Paresis)**

- Muscle tone: spastic

- Muscle strength: normal to ↑
- Muscle fasciculations: absent
- Muscle atrophy: late
- Bicipital reflex: normal to ↑
- Triceps reflex: normal to ↑
- Patellar reflex: normal to ↑
- Withdrawal reflex: normal to ↑
- Anal sphincter reflex: normal to ↑
- Tail wagging: normal to ↑
- Bladder – can it be expressed? Usually easily
- Cranial nerve absence: variable

## Causes

- Cerebral lesion
  - Traumatic brain injury
  - Hydrocephalus
  - Encephalitis/
    - Meningoencephalitis
  - Granulomatous meningoencephalitis (GME)
  - Brain tumours
- Brain stem lesion
- Cranial cervical spinal lesion (C1–C5)

### Traumatic Causes

- Disc prolapse
- Vertebral fracture/
  - luxation
- Haemorrhage/haematoma
- Fibrocartilaginous embolism
- Thromboembolism

### Congenital Causes

- Atlantoaxial subluxation [Dog]
- Cervical instability [Dog] (Wobbler syndrome)
- Meningocele

### Infectious Causes

- Discospondylitis/ Osteomyelitis
- Abscess
- Myelitis

### Immunoreactive Causes

- Granulomatous meningoencephalitis

### Degenerative Causes

- Spondylosis deformans
- Dura-mater ossification

### Tumours/Tumour

#### metastasis

- Lymphosarcoma [esp Cat]
- Osteosarcoma
- Chondrosarcoma
- Multiple myeloma

#### Other Causes

- Hypervitaminosis A [Cat]

## LMN Signs (Flaccid Paresis)

- Muscle tone: flaccid
- Muscle strength: ↓
- Muscle fasciculations: present
- Muscle atrophy: early
- Bicipital reflex: ↓
- Triceps reflex: ↓
- Patellar reflex: ↓
- Withdrawal reflex: ↓
- Anal sphincter reflex: ↓
- Tail wagging: ↓
- Bladder – can it be expressed? Usually easily

## Causes

- Polyneuropathy
- Junctionopathy
- Polymyopathy

## **LMN Sign (Fore limbs) + UMN Signs (Hind limbs)**

- Muscle tone: front: flaccid  
hind: spastic
- Muscle strength:  
front: ↓  
hind: ↑
- Muscle fasciculations:  
front: present  
hind: absent
- Muscle atrophy:  
front: early  
hind: late
- Patellar reflex: normal to ↑
- Anal sphincter reflex:  
normal to ↑
- Tail wagging: normal to ↑
- Bladder – can it be expressed?  
Usually with difficulty

### **Causes**

- Caudal cervical spinal lesion (C6–T2)

#### **Traumatic Causes**

- Disc prolapse
- Vertebral fracture/luxation
- Haemorrhage/haematoma
- Fibrocartilaginous embolism
- Thromboembolism

#### **Congenital Causes**

- Deformations of the vertebral spine
- Meningocele

#### **Infectious Causes**

- Discospondylitis/  
Osteomyelitis
- Abscess
- Myelitis

#### **Immunoreactive Causes**

- Granulomatous meningoencephalitis

#### **Degenerative Causes**

- Spondylosis deformans
- Dura-mater ossification

#### **Tumours/Tumour metastasis**

- Lymphosarcoma[esp Cat]
- Osteosarcoma
- Chondrosarcoma
- Multiple myeloma

#### **Other Causes**

- Hypervitaminosis A [Cat]

## **Hemiparesis (One Fore Limb and One Hind Limb Ipsilateral)**

### **UMN Signs (Spastic Paresis)**

- Muscle tone: spastic
- Muscle strength: normal to ↑
- Muscle fasciculations: absent
- Muscle atrophy: late
- Bicipital reflex: normal to ↑
- Triceps reflex: normal to ↑
- Patellar reflex: normal to ↑
- Withdrawal reflex: normal to ↑
- Anal sphincter reflex:  
normal to ↑
- Tail wagging: normal to ↑
- Bladder – can it be expressed?  
Usually with difficulty
- Cranial nerve function absences

### **Causes**

- Cerebral lesion (contralateral to the paralysis)
  - Traumatic brain injury

- Cerebral contusion
- Intracerebral haemorrhage
- Haematoma (subdural, epidural)
- Fibrocartilaginous embolism
- Thromboembolism (hemispherical infarction)
- Cerebral abscess
- Brain tumour/ tumour
- metastasis
- Lymphosarcoma [esp Cat]
- Neurinoma
- Glioma
- Medulloblastoma
- Chorioidal plexus papilloma
- Neuroblastoma
- Brain stem lesion (Causes as above)

## Diagnostic Approach

### *Paralysis*

#### **1. Case History**

#### **2. General Examination (Incl. Femoral Arterial Pulse)**

#### **3. Neurological Examination**

- Awareness/behaviour
- Body/limb position and posture
- Muscle tone/strength
- Cranial nerves
  - Facial symmetry (VII)
  - Facial sensation (V)
  - Menace reflex (II, VII)
  - Blink reflex (V, VII)
  - Corneal reflex/ eye movements (V, VI, VII/III, IV, VI)
  - Pupillary reflex (III, Sympathetic system)
  - Sight test (II)
  - Swallowing reflex/glossal motor function (X, XI, XII/ XII)
  - Sense of smell/taste/hearing (I/V/VIII)

- Cervical/shoulder muscles (XI)

- Spinal reflexes
  - Bicipital reflexes (C6–C8)
  - Triceps reflex (C7–T1)
  - Patellar reflex (L4–L6)
  - Withdrawal reflex (C6–T1 and L6–S1)
  - Cutaneous trunci reflex (C7–T1)
  - Anal sphincter reflex (S1–S3)
  - Bladder – can it be expressed?

- Postural Responses
  - Correction response
  - Hopping response
  - Side stepping response
  - Wheelbarrowing response
  - Righting response (hind limb)
  - Righting response (fore limb)
  - Table edge response (visual/tactile)

#### **4. X-Ray Study**

- Vertebral spine ± Myelography

#### **5. Blood Tests**

- Hct, Ery, Leuc, Hb

- Na, K, Ca
- TP, Alb, Glob
- BG, CK, Aldolase
- FIP Profile [Cat]
  - TP
  - Alb/Glob ratio
  - Bili
  - GOT
  - Serum electrophoresis
- Diff BC
- Insulin (Insulin/Glucose ratio)
- Serum electrophoresis

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Coronavirus Antibodies [Cat]
- Toxoplasma Antibodies
- Ehrlichia Antibodies [Dog]
- Neospora Antibodies [Dog]
- Canine Distemper antibodies [Dog]

#### **FUNCTION TESTS**

- T<sub>4</sub>, fT<sub>4</sub>
- TSH-/TRH stimulation test [Dog]

#### **6. Urinalysis**

- Urinary output/volume
- Urinalysis

- Specific gravity
- Urine sediment
  - Bacteria
  - Erythrocytes, leucocytes
  - Epithelial cells
  - Casts
  - Crystals
  - Tumour cytology
- Bacterial culture (Cystocentesis)

#### **7. Liquor Examination**

- Chemistry
  - TP, Glucose, CK
  - Globulin (Pandy and Nonne-Apel reaction)
- Electrophoresis
- Cytology
- Bacterial/fungal culture
- Canine distemper antibodies [Dog]
- (Liquor pressure)

#### **8. Further Tests**

- Skull/spinal MRT/(CT)
- Electrodiagnostics
  - Electromyography (EMG)
  - Measurement of impulse conduction
- Muscle biopsy
- Angiography

## **Principal symptoms/findings with cerebral and spinal lesions (presenting individually or combined)**

Cerebral lesion	<ul style="list-style-type: none"> <li>• Altered awareness</li> <li>• Circling movements (ipsilateral)</li> <li>• Head pressing</li> <li>• Loss of eye sight (contralateral)</li> <li>• Seizures</li> <li>• Hemiparesis: contralateral UMN signs</li> <li>• Tetraparesis: UMN signs</li> </ul>
Thalamic/Hypothalamic lesion	<ul style="list-style-type: none"> <li>• Altered awareness</li> <li>• Loss of eye sight (bilateral)</li> <li>• Sleeping/eating/drinking/body temperature disturbances</li> <li>• (Cardiac arrhythmias)</li> <li>• Dyspnoea</li> <li>• Electrolyte disturbances</li> <li>• Endocrine disturbances</li> <li>• Seizures</li> <li>• Opisthotonus</li> <li>• Hemiparesis: contralateral UMN signs</li> <li>• Tetraparesis: UMN signs</li> </ul>
Brain stem lesion	<ul style="list-style-type: none"> <li>• Altered awareness</li> <li>• Ataxia</li> <li>• Circling movements (ipsilateral)</li> <li>• Opisthotonus</li> <li>• Hemiparesis: ipsilateral UMN signs</li> <li>• Tetraparesis: UMN signs</li> <li>• Cranial nerve disorders: <ul style="list-style-type: none"> <li>– N. oculomotorius (III)</li> <li>– N. trochlearis (IV)</li> <li>– N. trigeminus (V)</li> <li>– N. abducens (VI)</li> <li>– N. facialis (VII)</li> <li>– N. vestibulocochlearis (VIII)</li> <li>– N. glossopharyngeus (IX)</li> <li>– N. vagus (X)</li> <li>– N. hypoglossus (XII)</li> </ul> </li> </ul>

### Principal symptoms/findings with cerebral and spinal lesions (presenting individually or combined)

Cerebral lesion	<ul style="list-style-type: none"> <li>• Ataxia</li> <li>• Dysmetria/Hypermetria</li> <li>• Tremor (Head/Intention tremor)</li> <li>• Absent menace response</li> <li>• Opisthotonus</li> </ul>
Cranial Cervical (C1 – C5)	<ul style="list-style-type: none"> <li>• Tetraparesis           <ul style="list-style-type: none"> <li>– Fore limb: UMN signs</li> <li>– Hind limb: UMN signs</li> </ul> </li> </ul>
Caudal cervical (C6 – T2)	<ul style="list-style-type: none"> <li>• Tetraparesis           <ul style="list-style-type: none"> <li>– Fore limb: LMN signs</li> <li>– Hind limb: UMN signs</li> </ul> </li> </ul>
Thoracolumbar spinal lesion (T3 – L3)	<ul style="list-style-type: none"> <li>• Paraparesis           <ul style="list-style-type: none"> <li>– Fore limb: normal</li> <li>– Hind limb: UMN signs</li> </ul> </li> </ul>
Lumbosacral spinal (L4 – S3)	<ul style="list-style-type: none"> <li>• Paraparesis           <ul style="list-style-type: none"> <li>– Fore limb: normal</li> <li>– Hind limb: LMN signs</li> </ul> </li> </ul>
Sacral spinal lesion (S1 – S3)	<ul style="list-style-type: none"> <li>• Tail Paralysis</li> <li>• Bladder paralysis (Detrusor)</li> <li>• Anal sphincter paralysis</li> <li>– Fore limb: normal</li> <li>– Hind limb: normal</li> <li>– Tail/Anus/Bladder LMN signs</li> </ul>

## Tremor

**Trembling:** Involuntary rhythmic muscle contractions of antagonising muscles (continuous tremor/intention tremor)

<b>Common Causes</b>	
Dog	Cat
+++ Distemper	+++ FIP
++ Poisoning	++ Poisoning
++ Metabolic causes	++ Metabolic causes
++ Cerebellar hypoplasia	++ Cerebellar hypoplasia

## Tremor

### Physiological Causes

- Excitement/fear
- Exhaustion
- Coldness

### Cerebellar/Brain Stem Diseases

- Cerebellar hypoplasia
  - Feline parvovirus (in utero) [Cat]
  - Canine Herpes virus (in utero) [Dog]
  - Live vaccine (in utero)
- Cerebellar degeneration
  - Cerebellar abiotrophy
  - Lysosomal storage disease
  - Neuroaxonal dystrophy
  - Dysmyelogenesis
  - White Dog Shaker Syndrome [Dog]
- Cerebellitis
  - FIP Coronavirus [Cat]
  - Canine distemper virus [Dog]
  - Toxoplasma sp.
  - Neospora sp. [Dog]
  - Cryptococcus sp. [Cat]
  - Granulomatous meningoencephalitis (GME)

- Cerebellar/brain stem tumours/tumour metastasis
  - ie medulloblastoma
  - Lymphosarcoma [esp Cat]
- Traumatic brain injury
- Cerebellar circulatory disorder
- Thiamine deficiency [Cat]

### Metabolic Causes

- Hypoglycaemia
- Hypocalcaemia
- Hyperkalaemia/Hypokalaemia
- Hypercortisolism (Cushing's disease) [esp Dog]
- Hyperthyroidism [Cat]

### Toxic Causes

- Drugs
  - Lidocaine
  - Ivermectin
  - Amitraz
  - Pyrethroids
  - Lindane
  - $\beta_2$  Agonists
  - Tricyclic antidepressants
  - Cytostatics
  - Theophylline
  - Ephedrine
  - Metoclopramide
  - Diphenhydramide

- Poisons
  - Pyrethrin/Pyrethroids (Insecticides)
  - Nicotine sulfate (Insecticide)
  - Organophosphates/ Carbamate (Insecticide)
  - Metaldehyde (slug pellets)
- Phenoxyacetate (Herbicide)
- Toxic plants
- Household detergents

## Other Causes

- Pain
- Spinal disease

## Diagnostic Approach

### *Tremor*

#### 1. Case History

#### 2. General Examination

#### 3. Neurological Examination

- Awareness/behaviour
- Body/limb position and posture
- Locomotion
- Cranial nerves
  - Facial symmetry (VII)
  - Facial sensation (V)
  - Menace reflex (II, VII)
  - Blink reflex (V, VII)
  - Corneal reflex/ eye movements (V, VI, VII/III, IV, VI)
  - Pupillary reflex (III, Sympathetic system)
  - Sight test (II)
  - Swallowing reflex/glossal motor function (X, XI, XII/ XII)
  - Sense of smell/taste/hearing (I/V/VIII)
  - Cervical and shoulder muscles (XI)
- Spinal reflexes
  - Bicipital reflex (C6–C8)
- Triceps reflex (C7–T1)
- Patellar reflex (L4–L6)
- Withdrawal reflex (C6–T1 and L6–S1)
- Cutaneous trunci reflex (C7–T1)
- Anal sphincter reflex (S1–S3)
- Bladder – can it be expressed?
- Postural responses
  - Correction response
  - Hopping response
  - Side stepping response
  - Wheelbarrowing response
  - Righting response (fore limb)
  - Righting response (hind limb)
  - Table edge response (visual/tactile)

#### 4. Blood Tests

- Hct, Ery, Leuc, Hb
- Na, K, Ca
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- FIP Profile [Cat]

- TP
- Alb/Glob ratio
- Bili
- GOT
- Serum electrophoresis
- Diff BC
- Thrombocyte
- Insulin (Insulin/Glucose ratio)

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Toxoplasma Antibodies
- Ehrlichia Antibodies [Dog]
- Neospora Antibodies [Dog]

#### **FUNCTION TESTS**

- T<sub>4</sub>
- TSH/TRH-Stimulation test [Dog]

#### **5. Urinalysis**

- Urinary output/volume
- Urine dip stick
- Specific gravity
- Urine sediment
  - Bacteria

- Erythrocytes, Leucocytes
- Epithelial cells
- Casts
- Crystals
- Tumour cytology

- Bacterial culture (Cystocentesis)

#### **6. X-Ray Study**

- Skull (Tympanic bulla)
- Spine ± Myelography

#### **7. Liquor Examination**

- Chemistry
  - TP, Glucose, CK
  - Globulin (Pandy and Nonne-Apelt reaction)
- Electrophoresis
- Cytology
- Bacterial-/fungal culture
- Canine distemper Antibodies [Dog]
- (Liquor pressure)

#### **8. Further Tests**

- Skull MRT
- Electrodiagnostics

# 8 Orthopaedic Principal Symptoms

Lameness of the fore limb .....	216
Lameness of the hind limb .....	221
Lameness of multiple limbs .....	225

## Further Relevant Principal Symptoms

Performance insufficiency (Ch. 1: General Symptoms) .....	
Paralysis (Ch. 7: Neurological Principal Symptoms) .....	

### Lameness of the fore limb

Common Causes	
Large Dog Breeds	Small Dog Breeds
Growing Dogs < 1 Year	
+++ Trauma (Distortion)	+++ Trauma (Distortion)
++ Panosteitis	+ Atlantoaxial Instability
+ Fragmented medial coronoid process	+ Distractio cubiti
+ Isolated anconeal process	+ Congenital luxations (Shoulder/Elbow)
+ Osteochondrosis dissecans (OCD) (shoulder/elbow)	+ Short radius/ulna syndrome
	+ Cardiac Arrhythmias
Adult Dogs > 1 Year	
+++ Trauma	+++ Trauma
++ Arthrosis	++ Arthrosis
+ Biceps tendovaginitis	++ Cervical spine disease
+ Bone tumours	++ Luxations (Elbow/Shoulder)

### Common Causes

Cats

Growing Cats < 1 Year

+++ Trauma

Adult Cats > 1 Year

+++ Trauma

## Shoulder

### Joint Disease

- Traumatic Causes
  - (Sub-)Luxation
  - Torn ligaments/Capsular injury
  - Contusion
  - Distortion
  - Epiphyseal fracture
  - Perforating wounds
  - Brachial plexus/Nerve damage as a result of a fracture
- Tumours/Synovial cysts
- Inflammatory Causes
  - Infectious arthritis
  - Non-infectious arthritis
  - Arthrosis
- Other Causes
  - Coagulopathy (Haemarthros)

- Osteopetrosis
- Rickets/osteomalacia
- Secondary hyperparathyroidism
- Hypervitaminosis A [Cat]
- Other Causes
  - Hypertrophic pulmonary osteopathy

### Muscle/Tendon Disease

- Traumatic Causes
  - Ruptured bicipital tendon
  - Strained muscle/haematoma
- Inflammatory Causes
  - Myositis
  - Tendovaginitis/Bursitis (Bicipital tendon)
- Tumours
- Other Causes
  - M. supraspinatus/infraspinatus contraction

## Bone Disease

- Traumatic Causes
  - Traumatic fractures
  - Pathological fractures
- Bone tumours (humerus)
- Osteomyelitis
- Metabolic Causes
  - Osteoporosis

### Growth Disturbances

- Panosteitis
- Osteochondrosis dissecans (OCD) [Dog]
- Shoulder joint dysplasia
- Epiphyseal damage/premature closure of the epiphyseal plate

- Epiphyseal fracture
- Congenital shoulder luxation
- Hypertrophic osteodystrophy [Dog]
- Juvenile bone cysts
- Dwarfism/Chondrodysplasia

## **Neurological Disease**

- Spinal Disease
- Compression syndrome
- Brachial plexus lesion/tumour
- Peripheral nerve lesion

## **Elbow**

### **Joint Disease**

- Traumatic Causes
  - (Sub-)Luxation
  - Rupture of the collateral ligaments
  - Contusion/distortion
  - Epiphyseal fracture
  - Perforating wounds
- Inflammatory Causes
  - Infectious arthritis
  - Non-infectious arthritis
  - Arthrosis
- Tumours/Synovial cysts
- Other Causes
  - Coagulopathy (Haemarthros)

### **Bone Disease**

- Traumatic Causes
  - Traumatic fractures
  - Pathological fractures
- Inflammatory Causes
  - Osteomyelitis
- Bone tumours
- Metabolic Causes

- Osteoporosis
- Osteopetrosis
- Rickets/osteomalacia
- Secondary hyperparathyroidism
- Hypervitaminosis A [Cat]
- Other Causes
  - Hypertrophic pulmonary osteopathy

## **Muscle/Tendon Disease**

- Traumatic Causes
  - Rupture of the triceps tendon
  - Strained muscle/haematoma
- Inflammatory Causes
  - Myositis
  - Tendovaginitis/bursitis
- Tumours
- Hygroma [Dog]

## **Growth Disturbances**

- Panosteitis
- Osteochondrosis dissecans (OCD) [Dog]
- Isolated anconaeal process [Dog]
- Fragmented medial coronoid process [Dog]
- Short radius/ulna syndrome
- Epiphyseal fracture
- Hypertrophic osteodystrophy [Dog]
- Luxation/Subluxation
- Juvenile bone cysts

## **Neurological Disease**

- Spinal Disease
- Compression syndrome

- Brachial plexus lesion/tumour
- Peripheral nerve lesion

## Carpus

### Joint Disease

- Traumatic Causes
  - (Sub-)Luxation
  - Contusion
  - Distortion
  - Perforating wounds
  - Hyperextension syndrome
- Inflammatory Causes
  - Infectious arthritis
  - Non-infectious arthritis
  - Arthrosis
- Tumours/Synovial cysts
- Other Causes
  - Coagulopathy

### Bone Disease

- Traumatic Causes
  - Traumatic fractures
  - Pathological fractures
- Inflammatory Causes
  - Osteomyelitis
- Bone tumours

## Muscle/Tendon Disease

- Traumatic Causes
  - Rupture of the ligamentous apparatus (hyperflexion)
  - Flexor muscle rupture
  - Strained muscle
  - Haematoma
- Inflammatory Causes
  - Myositis
  - Tendovaginitis/Bursitis
- Tumours

## Growth Disturbances

- Hypertrophic osteodystrophy [Dog]
- Weakness of the flexor tendon (hyperextension syndrome)
- Epiphyseal damage/ premature closure of the epiphyseal plate
- Epiphyseal fracture
- Osteochondrosis dissecans (OCD) [Dog]

## Neurological Disease

- Spinal Disease
- Compression syndrome
- Brachial plexus lesion/tumour
- Peripheral nerve lesion

## Fore Foot

### Joint Disease

- Traumatic Causes
  - (Sub-)Luxation
  - Rupture of the collateral ligaments
  - Contusion
  - Distortion
  - Perforating Wounds
- Inflammatory Causes
  - Infectious arthritis
  - Non-infectious arthritis
  - Arthrosis
- Tumours/Synovial cysts

### Bone Disease

- Traumatic Causes
  - Traumatic fractures
  - Pathological fractures
  - Sesamoid fracture (esp Rottweiler)

- Inflammatory Causes
  - Osteomyelitis
- Bone tumours

### **Muscle/Tendon Disease**

- Traumatic Causes
  - Flexor muscle rupture
  - Strained muscle
  - Haematoma
- Inflammatory Causes
  - Myositis
  - Tendovaginitis/bursitis

### **Growth Disturbances**

- Epiphyseal damage/premature closure of the epiphyseal plate
- Epiphyseal fracture

### **Disease of the Paw**

- Pulled out claw/fracture
- Interdigital foreign body
- Cut pad/granula
- Paronychia
- Bone fracture
- Luxation
- Tendon rupture
- Tumours

### **Neurological Disease**

- Spinal Disease
- Compression syndrome
- Brachial plexus lesion/tumour
- Peripheral nerve lesion

## **Diagnostic Approach**

### *Lameness*

#### **1. Case History**

#### **2. General Examination**

#### **3. Orthopaedic Examination**

- Position/posture (body and limbs)
- Gait
- Muscle tone
- Comparative limb palpation (distal proximal)
  - pain
  - (joint) swelling
  - crepitus
  - extension/flexion/rotation
  - joint stability
  - Patella – mobility?

- Drawer test (cruciate ligament stability)
- Ortolani test (hip joint stability)
- Spinal palpation

#### **4. Neurological Examination**

- Cutaneous sensation test
- Spinal reflexes
  - Bicipital reflex (C6–C8)
  - Triceps reflex (C7–T1)
  - Patellar reflex (L4–L6)
  - Withdrawal reflex (C6–T1 and L6–S1)
  - Cutaneous trunci reflex (C7–T1)
  - Anal sphincter reflex (S1–S3)
  - Bladder – can it be expressed?

- Postural Responses
  - Correction response
  - Hopping response
  - Sidestepping response
  - Wheelbarrowing response
  - Righting response (fore limb)
  - Righting response (hind limb)
  - Table edge response (visual/tactile)

## **5. X-Ray Study**

- Bones
- Joints
- Spine

## **6. Urinalysis**

- Urine dip stick
- Specific gravity
- Urine sediment

## **7. Blood Tests**

- Hct, Ery, Leuc, Hb
- Na, K, Ca
- TP
- BG
- CK

## **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Lyme Borrelia Antibodies [Dog]

## **8. Arthrocentesis**

- Synovial Analysis
  - colour, transparency, viscosity
  - mucin precipitation cytology
  - bacterial culture
  - fungal culture
  - TP
  - Electrophoresis Glucose
  - Rheumatoid factor

## **9. Further Tests**

- Diagnostic joint anaesthesia
- Bone scintigraphy
- Contrast arthrography/Arthroscopy
- Joint capsule biopsy/Bone biopsy
- Muscle biopsy

# Lameness of the Hind Limb

<b>Common Causes</b>	
Large Dog Breeds	Small Dog Breeds
Growing Dogs < 1 Year	
+++ Hip dysplasia (HD)	+++ Trauma
++ Panosteitis	++ Aseptic femoral head necrosis (Legg-Calvé-Perthes disease)
++ Trauma	+ Patellar luxation
+ Hypertrophic osteodystrophy	
Adult Dogs > 1 Year	
+++ Trauma	+++ Trauma

– Fractures	– Fractures
– Luxations	– Luxations
– Ligament ruptures (esp cruciates ± Meniscal rupture)	++ Arthrosis
	++ Patellar luxation
++ Hip joint arthrosis/HD (Coxarthrosis)	
++ Lumbar spinal disease	
+	Bone tumours

**Cats****Growing Cats < 1 Year**

+++ Trauma	+	Patellar luxation
++ Lumbar spine disease		

**Adult Cats > 1 Year**

+++ Trauma
Fractures
Luxations

## Hip

**Joint Disease**

- Traumatic Causes
  - (Sub-)Luxation
  - Torn ligament
  - Contusion
  - Distortion
  - Epiphyseal fracture
  - Perforating wounds
- Tumours/Synovial cysts
- Inflammatory Causes
  - Infectious arthritis
  - Non-infectious arthritis
  - Arthrosis (Coxarthrosis)

**Bone Disease**

- Traumatic Causes
  - Traumatic fractures

- Pathological fractures
- Metabolic Causes
  - Osteoporosis
  - Osteopetrosis
  - Rickets/osteomalacia
  - Secondary hyperparathyroidism
  - Hypervitaminosis A [Cat]
- Bone tumours
- Inflammatory Causes
  - Osteomyelitis
- Other Causes
  - Hypertrophic pulmonary osteopathy

**Muscle/Tendon Disease**

- Traumatic Causes
  - M. gracilis rupture
  - Sprained muscle
  - Haematoma

- Inflammatory Causes
  - Myositis
  - Tendovaginitis/Bursitis
- Tumours
- Other Causes
  - M. quadriceps contraction
  - M. gracilis contraction
  - M. semitendinosus contraction
  - Polymyopathy
- Meniscal damage
- Patellar luxation
- Contusion/distortion
- Epiphyseal fracture
- Perforating wounds
- Inflammatory Causes
  - Arthrosis
  - Infectious arthritis
  - Non-infectious arthritis
- Tumours/Synovial cysts

## Growth Disturbances

- Panosteitis
- Hip dysplasia (HD) [esp Dog]
- Legg–Calvé–Perthes disease [small dog breeds]
- Epiphyseal damage/premature closure of the epiphyseal plate
- Epiphyseal fracture
- Congenital luxation
- Juvenile bone cysts
- Hypertrophic osteodystrophy [Dog]

## Neurological Disease

- Spinal disease (Cauda equina syndrome)
- Compression syndrome
- Sciatic nerve lesion
- Peripheral nerve lesion

## Knee

### Joint Disease

- Traumatic Causes
  - (Sub-)Luxation
  - Cranial (caudal) cruciate ligament rupture
  - Rupture of the collateral ligaments

## Bone Disease

- Traumatic Causes
  - Traumatic fractures
  - Pathological fractures
- Inflammatory Causes
  - Osteomyelitis
- Metabolic Causes
  - Osteoporosis
  - Osteopetrosis
  - Rickets/Osteomalacia
  - Secondary hyperparathyroidism
- Bone tumours

## Muscle/Tendon Disease

- Traumatic Causes
  - Rupture of the patellar tendon/ patellar fracture
  - M. popliteus rupture (tendon of origin)
  - M. gastrocnemius rupture (tendon of origin)
  - Muscle sprain/haematoma
- Inflammatory Causes
  - Myositis
- Tumours
- Other Causes
  - M. quadriceps contraction

## Growth Disturbances

- Panosteitis
- Congenital lateral patellar luxation
- Congenital medial patellar luxation
- Osteochondrosis dissecans (OCD) [Dog]
- Epiphyseal damage/ premature closure of the epiphyseal plate
- Epiphyseal fracture
- Hypertrophic osteodystrophy [Dog]
- Juvenile bone cysts

## Neurological Disease

- Spinal disease (Cauda equina syndrome)
- Compression syndrome
- Sciatic nerve lesion
- Peripheral nerve lesion

## Tarsal Joint

### Joint Disease

- Traumatic Causes
  - (Sub-)Luxation
  - Rupture of the collateral ligaments
  - Contusion
  - Distortion
  - Perforating wounds
- Inflammatory Causes
  - Arthritis
  - Infectious arthritis
  - Non-infectious arthritis
- Tumours/Synovial cysts

## Bone Disease

- Traumatic Causes
  - Traumatic fractures
  - Pathological fractures
- Inflammatory Causes
- Osteomyelitis
- Bone tumours

## Muscle/Tendon Disease

- Traumatic causes
  - Achilles tendon rupture
  - Muscle strain
  - Haematoma
- Inflammatory Causes
  - Myositis
  - Tendovaginitis/Bursitis
- Other Causes
  - Tendon displacement of the Superficial flexor digitalis muscle

## Growth Disturbances

- Panosteitis
- Osteochondrosis dissecans (OCD) [Dog]
- Weakness of the flexor tendon (hyperextension syndrome) [esp Rottweiler]
- Epiphyseal plate damage/ premature closure of the epiphyseal plate
- Epiphyseal fracture
- Tibial dysplasia

## Neurological Disease

- Spinal disease (Cauda equine syndrome)
- Compression syndrome

- Psicatic nerve lesion
- Peripheral nerve lesion

## Hind Foot

### Joint Disease

- Traumatic Causes
  - (Sub-)luxation
  - Rupture of the collateral ligaments
  - Contusion
  - Distortion
  - Perforating wounds
- Inflammatory Causes
  - Infectious arthritis
  - Non-infectious arthritis
  - Arthrosis
- Tumours/Synovial cysts

### Bone Disease

- Traumatic Causes
  - Traumatic fractures
  - Pathological fractures
- Inflammatory Causes
  - Osteomyelitis
- Bone tumours

### Muscle/Tendon Disease

- Traumatic Causes
  - Flexor rupture

- Muscle sprain
- Haematoma
- Inflammatory Causes
  - Myositis
  - Tendovaginitis/Bursitis

### Growth Disturbances

- Epiphyseal plate damage/ premature closure of the epiphyseal plate
- Epiphyseal fracture

### Diseases of the Paw

- Pulled out claw/fracture
- Interdigital foreign body
- Cut pad/Granuloma
- Paronychia
- Bone fracture
- Luxation
- Ligament rupture
- Tumours

### Neurological Disease

- Spinal disease (Cauda equina syndrome)
- Compression syndrome
- Sciatic nerve lesion
- Peripheral nerve lesion

## Lameness of multiple limbs

Common Causes	
Dog	Cat
+++ Spinal disease	+++ Polymyopathy
++ Panosteitis	++ Polyarthritis

+	Polyarthritis	++	Spinal disease
+	Polymyopathy	+	Polyneuropathy
+	Polyneuropathy		

## Spinal disease

### Traumatic Causes

- Disc prolapse
- Vertebral fracture/luxation
- Haematoma/haemorrhage
- Fibrocartilaginous embolism
- Thromboembolism

### Congenital Causes

- Atlantoaxial subluxation [Dog]
- Cervical instability (Wobbler syndrome) [Dog]
- Spinal deformations [esp bull dog]

### Infectious Causes

- Discospondylitis/Osteomyelitis
  - Staphylococcus sp.
  - Brucella sp. [Dog]
  - Streptococcus sp.
  - E. coli
  - Pasteurella sp.
  - Actinomyces sp.
  - Nocardia sp.
  - Mycobacterium sp.
  - Aspergillus sp.
- Myelitis
  - Canine Distemper virus [Dog]
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
  - (Rabies virus)
  - Staphylococcus sp.
  - Lyme Borrelia sp. [Dog]
  - Cryptococcus sp. [Cat]

- Toxoplasma sp.
- Neospora sp. [Dog]
- Larva migrans
- (Ehrlichia sp. [Dog])

### Immunoreactive Causes

- Granulomatous meningoencephalitis (GME)
- Eosinophilic meningoencephalitis (EME)

### Degenerative Causes

- Lumbosacral stenosis (Cauda equina syndrome)
- Disc prolapse
- Spondylosis deformans
- Demyelinisation disease [German shepherd Dog]
- (Dura-mater ossification)

### Spinal Tumours

- Osteosarcoma
- Chondrosarcoma
- Multiple myeloma
- Tumour metastasis

### Other Causes

- Hypervitaminosis A [Cat]

## Bone Disease

### Traumatic Causes

- Traumatic fractures

- Pathological fractures

## Inflammatory Causes

- Osteomyelitis

### Bacterial Osteomyelitis

- Staphylococcus sp.
- Streptococcus sp.
- Proteus sp.
- E. coli
- Klebsiella sp.
- Pseudomonas sp.
- Actinomycetes sp.
- Clostridium sp.
- Peptostreptococcus sp.
- Bacteroides sp.
- Fusobacterium sp.

### Mycotic Osteomyelitis

- Cryptococcus sp.

## Growth Disturbances

- Panosteitis

## Metabolic Causes

- Hypertrophic osteodystrophy [Dog]
  - Malnutrition (Ca : P)
  - Vitamin C deficiency?
- Osteoporosis
  - Congenital osteoporosis (Osteogenesis imperfecta)
  - Senile osteoporosis
  - Inactivity osteoporosis
  - Hyperparathyroidism
  - Hypoalbuminaemia
  - Hypercortisolism (Cushing's disease) [Dog]
  - Diabetes mellitus
  - Hyperthyroidism [Cat]
  - Multiple myeloma [esp Dog]

- Heparin long term therapy
- Rickets/Osteomalacia
  - Vitamin D deficiency
  - Calcium deficiency
  - Malnutrition (Ca : P)
- Mucopolysaccharidosis Type I, VI [Cat]

## Bone Tumours

- Osteoma/Osteosarcoma
- Chondroma/Chondrosarcoma
- Multiple myeloma [esp Dog]
- Lymphosarcoma [esp Cat]
- Fibrosarcoma
- Bone metastasis

## Joint Disease

### Traumatic Causes

- Multiple joint trauma
- Multiple ligament ruptures/meniscal damage

### Inflammatory Causes

- Infectious polyarthritis

#### Viral polyarthritis

- Feline calici virus [Cat]

#### Bacterial polyarthritis

- Lyme Borrelia sp. [Dog]
- Mycoplasma sp. [esp Cat]
- Staphylococcus sp.
- Streptococcus sp.
- E. coli
- Pasteurella sp.
- Fusobacterium sp.
- Peptostreptococcus sp.
- Bacteroides sp.

#### Rickettsial polyarthritis

- (Ehrlichia sp. [Dog])
- (Rickettsia sp. [Dog])

### Mycotic polyarthritis

- Cryptococcus sp. [Cat]
- (Blastomyces sp.)
- (Coccidioides sp.)
- Non-infectious polyarthritis
  - Immunoreactive polyarthritis
    - Lupus erythematosus
    - Rheumatoid arthritis
    - Lymphoplasmacellular synovitis
    - Feline chronic progressive polyarthritis [Cat]
    - Immune complex disease
    - Drug allergy (Sulfonamides, Erythromycin, Lincomycin, Cephalosporines, Penicillins)
  - Coagulopathy (Haemarthros)
  - Arthrosis
    - Degenerative Causes
    - Unequal load distribution/overload (obesity)
    - Posture anomalies
  - Gout (Dalmatian)

### Growth Disorders

- Osteochondrosis dissecans (OCD) [Dog]
- Hip dysplasia (HD) [esp Dog]
- Aseptic femoral head necrosis [Dog] (Legg-Calvé-Perthes disease)

### Neuromuscular Disease

#### Polyneuropathy

- Congenital Causes
  - Axonopathy
  - Demyelinisation disease
  - Lysosomal storage disease
  - Spinal muscular atrophy

#### [Dog]

- Inflammatory Causes
  - Polyradiculoneuritis [Dog]
  - Polyneuritis
  - FeLV/FIV [Cat]
  - Toxoplasma sp.
  - Neospora sp. [Dog]
- Immunoreactive Causes
  - Lupus erythematosus
  - Myasthenia gravis
- Metabolic Causes
  - Hypothyroidism [Dog]
  - Diabetes mellitus
  - Paraneoplastic syndrome (insulinoma)
- Toxic Causes
  - Organophosphate poisoning (chronic)
  - Lead poisoning
  - Thallium poisoning
  - Cytostatics
  - Lindane
  - Botulism
  - Tick paralysis
- Other Causes
  - Nerve root compression syndrome
  - Feline dysautonomia [esp Cat]

#### Polymyopathy

- Congenital Causes
  - Muscular dystrophy
  - Dermatomyositis [Dog]
  - Glycogen storage disease
- Inflammatory Causes
  - Toxoplasma sp.
  - Neospora sp. [Dog]
  - Lyme Borrelia sp. [Dog]
  - Leptospira sp. [Dog]

- Immunoreactive Causes
  - Eosinophilic myositis [Dog]
- Metabolic Causes
  - Vitamin E/Selenium deficiency
  - Hypokalaemia [esp Cat]
  - Hypercortisolism (Cushing's disease) [Dog]
  - Glucocorticoid long term therapy
  - Hypothyroidism [Dog]
- Other Causes
  - Feline aortic thromboembolism [esp Cat]

## Tendon Disease

- Tendon weakness (Hyperextension syndrome)
  - Malnutrition (Protein overload, Ca : P, Vitamin C deficiency?)
- Bilateral patellar luxation
- Tendovaginitis/Bursitis
- Hygroma [Dog]

# 9 Ophthalmological Principal Symptoms

Anisocoria .....	230
Ocular Discharge .....	233
Reddening of the Eye .....	234
Cataract .....	238
Enophthalmos/Exophthalmos .....	241
Prolapse of the Nictitating Membrane .....	243
Loss of Eyesight/Blindness .....	244
Strabismus .....	248

## Further Relevant Principal Symptoms

Nystagmus (Ch. 7: Neurological Principal Symptoms) .....	
--	--

### Anisocoria

Uneven pupillary size

Common Causes	
Dog	Cat
+++ Traumatic brain injury	+++ FeLV/FIV, FIP Coronavirus
++ Spinal trauma	++ Traumatic brain injury
++ Encephalitis/ Meningoencephalitis	++ Encephalitis/ Meningoencephalitis
++ Tumours	++ Tumours
++ Eye disease	++ Eye disease

## Unilateral Miosis

### Ocular Disease

- Uveitis anterior/synechia
- Ulcerative keratitis
- Foreign body
- Keratoconjunctivitis sicca
- Pupillary spasm (FeLV) [Cat]

### Sympathetic Nerve Lesion

- Horner syndrome (miosis, ptosis, enophthalmos, prolapse of the nictitating membrane)
  - Brain stem lesion
  - Cervical spinal lesion
  - Thoracic spinal lesion (T1–T3)
  - Nerve root compression syndrome (T1–T3)
  - Brachial plexus lesion
  - Mediastinal disease
  - Middle ear lesion
  - Retrobulbar lesion
- Traumatic brain injury
- Encephalitis/ Meningoencephalitis
- Brain tumours
- Spinal trauma
- Otitis media/interna

- Brachial plexus avulsion/tumours/abscess
- Mediastinitis/ Mediastinal tumours
- Middle ear tumours
- Retrobulbar abscess/tumours

## Unilateral Mydriasis

### Ocular Disease

- Glaucoma
- Lens luxation
- Progressive retinal atrophy
- Eye tumours
- Iridal atrophy/hypoplasia
- Drugs
  - Atropine

### Parasympathetic Nerve Lesion

- Optic nerve (I) lesion (lesion ipsilateral)
- Optic tract lesion (lesion contralateral)
- Oculomotor nerve (III) lesion (lesion ipsilateral)
- Traumatic brain injury
- Tonometry
- Gonioscopy
- Conjunctival smear

## Diagnostic Approach

### Anisocoria

#### 1. Case History

#### 2. General Examination

#### 3. Ocular Examination

- Inspection
- Sight test

- Reflex responses
  - Sight test (II)
  - Menace reflex (II, VII)
  - Blink reflex (V, VII)
  - Corneal reflex (V, VI, VII)

- Pupillary reflex (III,  
Sympathetic nerve)
- Pupillary symmetry/size
- Eye movements (III, IV, VI)
- Facial symmetry (VII)
- Schirmer tear test
- Eversion of the nictitating membrane
- Fluorescein test
- Direct/indirect ophthalmoscopy
- Neuritis
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
- Encephalitis/  
Meningoencephalitis
- Brain tumours
- Retrobulbar abscess/tumours
- Peripheral nerve tumours  
(Neurinoma)
  - Chlamydia sp.
  - Canine distemper virus antigen
  - Feline Herpes virus antigen
  - Cytology
  - Bacterial culture
- Flushing of the tear duct
- Ultrasound
- Puncture of the vitreous body
  - Tumour cytology
  - Bacterial/fungal culture
- Electroretinogram (ERG)

#### **4. Blood Tests**

- Hct, Ery, Leuc
- FIP Profile [Cat]
  - TP
  - Alb/Glob ratio

- Bili
- GOT
- Serum electrophoresis
- Diff BC

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]

#### **5. Pharmacological Function Tests**

- Sympathetic nerve
  - Phenylephrine (1%) test
  - Hydroxyamphetamine test
- Parasympathetic nerve
  - Pilocarpine (1%) test
  - Physostigmine test

#### **6. X-Ray Study**

- Thorax
- Skull
- Spine ± Myelography

#### **7. Ultrasound**

- Orbit
- Thorax

#### **8. Further Tests**

- Liquor puncture/analysis
  - Liquor pressure
  - Leucocyte number + Diff
  - TP, Glucose, CK
  - Globulin (Pandy and Nonne-Apelt reaction)
  - Bacterial/fungal culture
  - Tumour cytology
  - Electrophoresis
  - Canine distemper antibodies [Dog]
- Skull CT/MRT

## Ocular Discharge

**Epiphora:** Overflow of tears above the edge of the lid

Common Causes	
Dog	Cat
+++ Keratoconjunctivitis	+++ Cat flu
++ Foreign body	+ Keratoconjunctivitis
++ Entropium/ectropium	++ Foreign body
++ Conjunctivitis follicularis	++ Ulcerative conjunctivitis
++ Ulcerative keratitis	++ Eosinophilic keratoconjunctivitis
+	++ Nasolacrimal stenosis

### ↑ Tear Production

#### Mechanical Irritation

- Trauma
- Entropium/ectropium
- Distichiasis/Trichiasis
- Foreign body
- Eye lid tumours
- Dermoid cysts
- Eyelid coloboma
- Hordeolum (stye)
- Chalazion
- High nasolabial fold (Pekingese)

#### Infectious Causes

- Viral keratoconjunctivitis
  - Feline Herpes virus [Cat]
  - Canine distemper virus [Dog]
- Bacterial keratoconjunctivitis
  - Staphylococcus spp.
  - Mycoplasma sp. [esp Cat]
  - Chlamydia sp. [Cat]

#### Immunoreactive Causes

- Feline eosinophilic keratoconjunctivitis [Cat]
- Plasmacell keratoconjunctivitis (esp German Shepherd Dog)
- Lymphofollicular hyperplasia (conjunctivitis follicularis) [Dog]
- Dust/Pollen allergy

#### Other Causes

- Rhinitis [esp Cat]
- Blepharitis
- Ulcerative keratitis
- Endonasal foreign body
- Endonasal tumours
- Uveitis anterior

#### Tear Flow Disturbances

#### Congenital Causes

- Tear duct stenosis/absent lacrimal punctum
- Nasolacrimal atresia

- Symblepharon [esp Cat]
- Eyelid agenesis
- Foreign body
- Tumours
- Entropium/ectropium

## Acquired Causes

- Rhinitis/Sinusitis
- Trauma

## Diagnostic Approach

### Ocular Discharge

#### 1. Case History

#### 2. General Examination

#### 3. Ocular Examination

- Inspection
- Sight test
- Schirmer tear test
- Eversion of the nictitating membrane
- Conjunctival smear
  - Chlamydia sp.
  - Canine distemper virus antigen
  - Feline Herpes virus antigen

- Cytology
- Bacterial culture
- Fluorescein test
- Flushing of the tear duct
- Direct/indirect ophthalmoscopy
- Reflex responses
- Tonometry
- Gonioscopy

#### 4. Further Tests

- Ultrasound
- Puncture of the vitreous body + analysis
  - Tumour cytology
  - Bacterial/fungal culture

## Reddening of the Eye

Often in combination with blepharospasm (tight closure of the eye lids) as a result of painful ocular disease

### Common Causes

Dog	Cat
+++ Conjunctivitis	+++ Conjunctivitis
++ Blepharitis	++ Blepharitis
++ Glaucoma	++ Glaucoma
++ Uveitis anterior	++ Uveitis anterior

## Reddening of the Eyelids

### Blepharitis

- Traumatic blepharitis
  - abrasion/scratch/bite
  - wounds/foreign body
- Bacterial blepharitis
  - Staphylococcal pyoderma
  - Hordeolum (sty)
- Mycotic blepharitis
  - Microsporum sp.
  - Trichophyton sp.
- Parasitic blepharitis
  - Demodex sp.
  - Sarcoptes sp.
  - Notoedres sp. [Cat]
- Immunoreactive blepharitis
  - Atopy/inhalation allergy
  - Contact allergy
  - Drug allergy
  - Feline eosinophilic granuloma [Cat]
  - Lupus erythematosus
  - Pemphigus complex
- Eyelid tumours
  - Meibomian gland adenoma/ carcinoma
  - Squamous cell carcinoma
  - Melanoma
  - Warts
- Other Causes
  - Collie dermatomyositis [Dog]
  - Hypothyroidism [Dog]
  - Hypercortisolism (Cushing's disease) [Dog]
  - Diabetes mellitus
  - Zinc deficiency dermatosis [Dog]

## Conjunctival Reddening

### Conjunctivitis

- Traumatic conjunctivitis
  - abrasion/scratch/bite
  - wounds/foreign body
- Mechanical irritation
  - Entropium/ectropium
  - Eyelid tumours
  - Distichiasis/trichiasis
  - Nasolacrimal stenosis/ agenesis
  - Foreign body
  - Draught
  - Hyperplasia of the nictitating gland
  - Eversion of the cartilage of the nictitating membrane [Dog]
- Viral conjunctivitis
  - Canine distemper virus [Dog]
  - Feline herpes virus [Cat]
  - Feline calici virus [Cat]
- Bacterial conjunctivitis
  - Staphylococcus sp.
  - Streptococcus sp.
  - Chlamydia sp. [Cat]
  - Mycoplasma sp. [esp Cat]
- Immunoreactive conjunctivitis
  - Atopy/inhalation allergy
  - Contact allergy
  - Drug allergy (Neomycin eye ointment)
  - Feline eosinophilic conjunctivitis [Cat]
  - Plasmacell keratoconjunctivitis [Dog]

- Lymphofollicular hyperplasia (Conjunctivitis follicularis) [Dog]
  - Lupus erythematosus
- Toxic conjunctivitis
  - Irritant gases/Chemicals
- Conjunctival tumours
  - Melanoma
  - Lymphosarcoma [esp Cat]
  - Haemangioma/  
Haemangiosarcoma
  - Mast cell tumour [esp Dog]
  - Papilloma
  - Histiocytoma

## Scleral Reddening

### Episcleritis

- Immunoreactive Episcleritis
  - Atopy/Inhalation allergy
  - Drug allergy (Neomycin eye ointment)
  - Feline eosinophilic conjunctivitis [Cat]
  - Plasmacell keratoconjunctivitis [Dog]
  - Lupus erythematosus

## Glaucoma

### Primary Glaucoma

- Wide iridocorneal angle
- Narrow iridocorneal angle
- Goniodyplasia

### Secondary Glaucoma

- Lens luxation
- Uveitis anterior
- Hypermature cataract

- Hyphaema
- Neoplasia

## Uveitis anterior

- Trauma
- Viral uveitis
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
  - Canine distemper virus [Dog]
  - CAV-1 (Hepatitis c. c.) [Dog]
- Bacterial uveitis
  - Brucella sp. [Dog]
  - Lyme Borrelia sp. [Dog]
  - Leptospira sp. [Dog]
  - Mycobacterium sp.
- Rickettsial uveitis
  - (Ehrlichia sp. [Dog])
  - (Rickettsia sp. [Dog])
- Mycotic uveitis
  - Candida sp.
  - Cryptococcus sp. [Cat]
  - (Histoplasma sp.)
  - (Blastomyces sp.)
  - (Coccidioides sp.)
- Parasitic uveitis
  - Toxoplasma sp.
  - (Dirofilaria sp. [esp Dog])
  - (Leishmania sp. [esp Dog])
  - Larva migrans
- Immunoreactive uveitis
  - After rupture of the lens capsule
  - Vasculitis
  - Periarteritis nodosa
- Tumours
  - Melanoma
  - Lymphosarcoma [esp Cat]
- Arterial hypertension

## Other Causes

- Lens luxation
- Retrobulbar abscess/tumours
- Trauma

## Corneal Reddening

### Secondary Vascularisation

- Chronic corneal injury
- Chronic ulcerative keratitis
- Chronic keratoconjunctivitis sicca
- Chronic glaucoma
- Corneal acid burn (esp household agents)

## Reddening of the Ocular Chamber

### Anterior Chamber (Hyphaema)

- Trauma
- Coagulopathy
- Lens luxation
- Tumours

- Haemangioma/  
Haemangiosarcoma
- Melanoma
- Lymphosarcoma [esp Cat]
- Haemorrhagic uveitis anterior
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
  - Larva migrans
  - (Ehrlichia sp. [Dog])
- Vasculitis
- Hypertension
  - Renal failure
  - Hyperthyroidism [Cat]

### Posterior Chamber (Fundal Haemorrhage)

- Hyphaema
- Retinal detachment
- Progressive retinal atrophy
- Granulomatous meningoencephalitis (GME)
- Ocular anomaly in the collie [Dog]

## Diagnostic Approach

### *Reddening of the Eye*

#### 1. Case History

#### 2. General Examination

#### 3. Ocular Examination

- Inspection
- Sight test
- Schirmer tear test
- Eversion of the nictitating membrane
- Conjunctival smear

- Chlamydia sp.
- Canine distemper virus antigen
- Feline Herpes virus antigen
- Cytology
- Bacterial culture
- Fluorescein test
- Direct/indirect ophthalmoscopy
- Tonometry
- Gonioscopy

- Reflex responses
- Flushing of the tear ducts
- Ultrasound
- Puncture of the vitreous body
  - Tumour cytology
  - Bacterial/fungal culture

#### **4. Blood Tests**

- Hct, Ery, Leuc
- TP, Alb, Glob
- FIP Profile [Cat]
  - TP
  - Alb/Glob ratio
  - Bili
  - GOT
  - Serum electrophoresis
- Urea, Creatinine
- Diff BC

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]
- Toxoplasma Antibodies

- Ehrlichia Antibodies [Dog]
- Leptospira Antibodies [Dog]
- Lyme Borrelia Antibodies [Dog]
- Brucella Antibodies [Dog]
- Leishmania Antibodies [Dog]

#### **IMMUNOSEROLOGY**

- ANA Test

#### **COAGULATION**

- Bleeding time
- Prothrombin time (PT/Quick)
- (Activated) partial Thromboplastin time (PTT/aPTT)
- Fibrin degradation products (FDP)
- Thrombocyte number

#### **5. Further Tests**

- Blood pressure measurement (indirect/direct)

## Cataract

Cloudiness of the cornea, lens or aqueous fluid

#### **Common Causes**

Dog	Cat
+++ Cataract	+++ Cataract
++ Ulcerative keratitis	++ Ulcerative keratitis
++ Corneal oedema	++ Corneal oedema

#### **Cataract of the Cornea**

#### **Corneal Oedema**

- Mechanical Irritation
  - Entropion
  - Distichiasis
- Trauma
- High nasal fold (Pekingese)
- Glaucoma
- Drugs
  - Dimethylsulfoxide (DMSO)

- Idiopathic in Manx cats
- Endothelial dystrophy

## Keratitis

- Trauma
- Mechanical Irritation
  - Foreign body
  - Entropium/Ectropium
  - Distichiasis/Trichiasis
- Viral Keratitis
  - Canine distemper virus [Dog]
  - Feline Herpes virus [Cat]
  - CAV-1 (Hepatitis c. c.) [Dog]
- Immunoreactive Keratitis
  - Keratoconjunctivitis sicca [esp Dog]
  - Sjögren syndrome [Dog]
  - Drug allergy (Neomycin eye ointment)
  - Feline eosinophilic keratitis [Cat]
  - Plasmacell keratoconjunctivitis [Dog]
- Ulcerative keratitis
- Toxic conjunctivitis
  - Irritant gases/chemicals
- Other Causes
  - Feline corneal sequestrum [Cat]
  - Dermoid

## Infiltrative Corneal Disease

- Lipid deposits
  - Hypothyroidism [Dog]
  - Corneal dystrophy
- Immune complex disease
- Mucopolysaccharidosis [Cat]
- Ganglosidosis
- Mannosidosis

## Cataract of the Anterior Chamber

## Hyphaema (Haemorrhage)

- Trauma
- Coagulopathy
- Lens luxation
- Haemorrhagic uveitis anterior
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
  - Larva migrans
  - (Ehrlichia sp. [Dog])
- Arterial hypertension
  - Renal failure
  - Hyperthyroidism [Cat]
- Tumours
  - Haemangioma/  
Haemangiosarcoma
  - Melanoma
  - Lymphosarcoma [esp Cat]
- Vasculitis

## Hypopyon (Pus)

- Bacterial uveitis
  - Brucella sp. [Dog]
  - Lyme Borrelia sp. [Dog]
  - Leptospira sp. [Dog]
  - Mycobacterium sp.
- Rickettsial Uveitis
  - (Ehrlichia sp. [Dog])
  - (Rickettsia sp. [Dog])
- Mycotic Uveitis
  - Candida sp.
  - Cryptococcus sp. [Cat]
  - (Histoplasma sp.)
  - (Blastomyces sp.)
  - (Coccidioides sp.)
- Parasitic uveitis
  - Toxoplasma sp.
  - (Dirofilaria sp. [esp Dog])

- (Leishmania sp. [esp Dog])
- Larva migrans

## Fibrin

- Chronic inflammation

## Cataract of the Lens

### Cataract

- Senile cataract (senile sclerosis)

- Acquired cataract
  - Diabetes mellitus
  - Chronic uveitis
  - Progressive retinal atrophy
  - Hypocalcaemia
  - Electrical accident
  - Radiation
  - Dinitrophenole
  - Dimethylsulfoxide (DMSO)
  - Selenium deficiency
- Congenital/juvenile cataract

## Diagnostic Approach

### Cataract

- 1. Case History**
- 2. General Examination**
- 3. Ocular Examination**

- Inspection
- Sight test
- Schirmer tear test
- Eversion of the nictitating membrane
- Conjunctival smear
  - Chlamydia sp.
  - Canine distemper virus antigen
  - Feline herpes virus antigen
  - Cytology
  - Bacterial culture
- Fluorescein test
- Direct/indirect ophthalmoscopy
- Tonometry
- Gonioscopy
- Reflex responses
- Flushing of the tear ducts
- Ultrasound

- Puncture of the vitreous body
  - Tumour cytology
  - Bacterial/fungal culture

### 4. Blood Tests

- Hct, Ery, Leuc
- TP, Alb, Glob
- FIP Profile [Cat]
  - TP
  - Alb/Glob ratio
  - Bili
  - GOT
  - Serum electrophoresis
- Diff BC
- Urea, Creatinine

### MICROBIAL SEROLOGY

- FeLV-/FIV antigen [Cat]
- Toxoplasma antibodies
- Ehrlichia antibodies [Dog]
- Leptospira antibodies [Dog]
- Lyme Borrelia antibodies [Dog]
- Brucella antibodies [Dog]
- Leishmania antibodies [Dog]

**IMMUNE SEROLOGY**

- ANA Test
- Coagulation
- Bleeding time
- Prothrombin time (PT/Quick)
- (Activated) partial Thromboplastin time (PTT/aPTT)

- Fibrin degradation product (FDP)
- Thrombocyte number

**5. Further Tests**

- Blood pressure measurement (indirect/direct)

## Enophthalmos/Exophthalmos

**Enophthalmos:** Posterior displacement of the bulbus into the orbit

**Exophthalmos:** Protrusion of the bulbus out of the orbit

**Common Causes****Dog****Cat****Enophthalmos**

- +++ Chronic painful ocular disease
- ++ Orbital fracture

- +++ Chronic painful ocular disease
- ++ Orbital fracture

**Exophthalmos**

- + Retrobulbar abscess
- + Retrobulbar tumours

- ++ Retrobulbar abscess
- + Retrobulbar tumours

### Enophthalmos

### Chronic Painful Ocular Disease

- Infectious keratoconjunctivitis
- Ulcerative keratitis
- Keratoconjunctivitis sicca [esp Dog]
- Entropium/Ectropium
- Distichiasis
- Iridocyclitis
- Chorioretinitis
- Lens luxation

- Horner syndrome (Sympathetic nerve lesion)
  - Brain stem lesion
  - Cervical spine lesion
  - Thoracic spinal lesion (T1–T3)
  - Nerve root compression syndrome (T1–T3)
  - Brachial plexus lesion
  - Mediastinal disease
  - Middle ear lesion
  - Retrobulbar lesion
- Microphthalmus
  - congenital
  - chronic panophthalmia

### Other Causes

- Orbital fracture

- Bulbar rupture
- Orbital fat atrophy (cachexia)

## Exophthalmos

### Bulbar Causes

- Glaucoma
- Bulbar prolapse
  - Trauma
  - Brachycephalic dog breeds [Dog]

### Retrobulbar Causes

- Retrobulbar abscess
  - Foreign body

- Dental abscess
- Mycotic granuloma
- Cryptococcus sp. [Cat]
- Aspergillus sp. [Dog]
- Sialadenitis (Gl. zygomatica)
- Retrobulbar/Orbital tumours
  - Fibrosarcoma
  - Lymphosarcoma
  - Osteosarcoma
  - Squamous cell carcinoma
  - Adenocarcinoma
  - Rhabdomyosarcoma
- Orbital trauma/haemorrhage
- Eosinophilic myositis [Dog]
- Sialocele (Gl. zygomatica)

## Diagnostic Approach

### *Enophthalmos/Exophthalmos*

- 1. Case History**
  - 2. General Examination**
  - 3. Examination of the Oral and Oropharyngeal Cavity**
  - 4. Ocular Examination**
    - Inspection
    - Sight test
    - Reflex responses
    - Schirmer tear test
    - Eversion of the nictitating membrane
    - Fluorescein test
    - Direct/indirect ophthalmoscopy
    - Tonometry
    - Gonioscopy
  - 5. X-Ray Study**
    - Skull (Orbit)
  - 6. Ultrasound**
    - Orbit
  - 7. Blood Tests**
    - FIP Profile [Cat]
      - TP
      - Alb/Glob ratio
      - Bili
      - GOT
      - Serum electrophoresis
- MICROBIAL SEROLOGY**
- FeLV-/FIV Antigen [Cat]

## Prolapse of the Nictitating Membrane

Protrusion of the third eyelid (Membrana nictitans) across the eye

### Common Causes

Dog	Cat
+++ Painful ocular disease	+++ Painful ocular disease
++ Pyrexic systemic disease	++ Pyrexic systemic disease
++ Sedatives/Anticonvulsants	++ Sedatives/Anticonvulsants

### Unilateral prolapse

- Blepharospasm
  - Foreign body
  - Ulcerative keratitis
  - Uveitis anterior
  - Glaucoma
  - Distichiasis/Trichiasis
  - Lens luxation
  - Entropium/Ectropium
- Exophthalmos
  - Retrobulbar abscess/tumours
- Enophthalmos
  - Chronic painful ocular disease
- Horner syndrome (Sympathetic lesion)
  - Brain stem lesion
  - Cervical spinal lesion
  - Thoracic spinal lesion (T1–T3)
  - Nerve root compression syndrome (T1–T3)
  - Brachial plexus lesion
  - Mediastinal disease

- Middle ear disease
- Retrobulbar lesion
- Hyperplasia/tumour/prolapse of the nictitating gland
- Eversion of the cartilage of the nictitating membrane [Dog]
- Symblepharon [esp Cat]
  - Congenital
  - Chronic inflammation

### Bilateral Prolapse

- Blepharospasm
  - Conjunctivitis
  - Keratoconjunctivitis sicca [esp Dog]
  - Lymphofollicular hyperplasia (Conjunctivitis follicularis) [Dog]
  - Uveitis anterior
  - Glaucoma
  - Distichiasis/Trichiasis
  - Entropium/Ectropium
- Pyrexic systemic disease
- Sedatives

- Acepromazine
- Anticonvulsants
- Exophthalmos
  - Eosinophilic myositis [Dog]
- Enophthalmos
- Chronic painful ocular disease
- Feline dysautonomia [esp Cat]
- Tetanus [Dog]
- (Intestinal parasites)

## Diagnostic Approach

### *Prolapsed Nictitating Membrane*

#### 1. Case History

#### 2. General Examination

#### 3. Ocular Examination

- Inspection
- Sight test
- Reflex responses
- Schirmer tear test
- Eversion of the nictitating membrane
- Conjunctival smear
  - Chlamydia sp.
  - Canine distemper virus antigen
  - Feline Herpes virus antigen
  - Cytology
  - Bacterial culture
- Fluorescein test
- Direct/indirect ophthalmoscopy
- Tonometry
- Gonioscopy

- Ultrasound
- Puncture of the vitreous body
  - Tumour cytology
  - Bacterial/fungal culture

#### 4. Blood Tests

- Hct, Ery, Leuc
- Na, K, Ca
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- Diff BC
- FIP Profile [Cat]
  - TP
  - Alb/Glob ratio
  - Bili
  - GOT
  - Serum electrophoresis

#### **MICROBIAL SEROLOGY**

- FeLV-/FIV Antigen [Cat]

#### **FAECAL EXAMINATION**

- Flotation

## Loss of Eyesight/Blindness

Reduced to complete lack of vision (Amaurosis)

## Common Causes

Dog	Cat
+++ Cataract	+++ Optic neuritis (FeLV/FIV, FIP Coronavirus)
++ Retinal detachment/atrophy	++ Encephalitis/ meningoencephalitis
++ Glaucoma	
++ Uveitis	
++ Tumours	++ Tumours
++ Granulomatous meningo- encephalitis	++ Cataract
	++ Arterial hypertension
	++ Retinal detachment/atrophy
	++ Glaucoma

## Unilateral Loss of Eyesight

### Acute Causes

- Acute trauma
- Hyphaema
- Acute glaucoma
- Lens luxation
- Traumatic cataract
- Sudden acute retinal detachment/atrophy (SARD)
- Optical nerve (HN-II) lesion
  - Bulbus prolapse
  - Head trauma
- Central nervous lesions (Occipital cortex)
  - Traumatic brain injury
  - Cerebral haemorrhage
  - Cerebral abscess
  - Brain tumours

### Chronic Causes

- Keratitis
- Corneal oedema
- Clouding of the anterior chamber
  - Hyphaema

- Hypopyon (Uveitis anterior)
- Fibrin/synechia
- Cataract
  - Traumatic cataract
  - Cataract as a result of uveitis
- Retinal detachment/atrophy
  - Glaucoma
  - Fundal haemorrhage
  - Chorioretinitis
  - Collie eye anomaly [Dog]
  - Progressive retinal atrophy
- Optical nerve lesion (HN-II)
  - Tumours
  - Retrobulbar abscess/tumour
  - Congenital hypoplasia/aplasia

## Bilateral Loss of Eyesight

### Acute Causes

- Traumatic Brain Injury
- Acute glaucoma
- Cataract
  - Traumatic cataract
  - Diabetic cataract

- Lens luxation
- Sudden acute retinal detachment/atrophy (SARD)
- Optical nerve (HN-II) lesion
  - Bulbus prolapse
  - Head trauma
- Central nervous lesions (Occipital cortex)
  - Traumatic brain injury
  - Cerebral haemorrhage
  - Cerebral abscess
  - Brain tumours
- Hypoxia
  - Anaesthetic incident
  - Drowning
- Poisoning
  - Lead
  - Organophosphates
  - Ethylene glycol
  - Toxic plants
- Retinal detachment/atrophy
  - Canine distemper virus [Dog]
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
  - Cryptococcus sp. [Cat]
  - (Blastomyces sp.)
  - (Coccidioides sp.)
  - (Ehrlichia sp. [Dog])
  - Brucella sp. [Dog]
  - Lyme Borrelia sp. [Dog]
  - Immunoreactive chorioretinitis
  - Tumours
  - Arterial hypertension [esp Cat]
  - Hypercortisolism (Cushing's disease) [Dog]
  - Collie eye anomaly [Dog]
  - Progressive retinal atrophy
  - Taurine deficiency [Cat]
  - Vitamin A/E deficiency
  - Fundal haemorrhage
- Optical nerve neuritis
  - Canine distemper virus [Dog]
  - FIP Coronavirus [Cat]
  - Cryptococcus sp. [Cat]
  - Toxoplasma sp.
  - Neospora sp. [Dog]
  - Granulomatous meningoencephalitis (GME)
  - Lead poisoning
  - Tumours
  - Congenital hypoplasia
- Central nervous disturbances

## Chronic Causes

- Chronic glaucoma
- Corneal opacity
  - Keratitis
  - Corneal oedema
  - Infiltrative disease
- Cataract
  - Congenital cataract
  - Senile cataract
  - Diabetic cataract
  - Cataract as a result of uveitis
  - Cataract as a result of progressive retinal atrophy
  - Cataract as a result of hypocalcaemia

- Chronic Causes
  - Canine distemper virus [Dog]
  - FIP Coronavirus [Cat]
  - Cryptococcus sp. [Cat]
  - Toxoplasma sp.
  - Neospora sp. [Dog]
  - Granulomatous meningoencephalitis (GME)
  - Lead poisoning
  - Tumours
  - Congenital hypoplasia
- Central nervous disturbances

- Granulomatous meningoencephalitis (GME)
- Hydrocephalus
- Encephalitis
- Endocrine encephalopathy
- Chronic lead poisoning
- Brain tumours
- Hypoxia

## Diagnostic Approach

### *Loss of Eyesight/Blindness*

- 1. Case History**
- 2. General Examination**
- 3. Ocular Examination**

- Inspection
- Sight test
- Reflex responses
  - Sight test (II)
  - Menace response (II, VII)
  - Blink reflex (V, VII)
  - Corneal reflex (V, VII)
  - Pupillary reflex (II, III)
  - Pupillary symmetry/width
  - Eye movements (III, IV, VI)
  - Facial symmetry (VII)
- Schirmer tear test
- Eversion of the nictitating membrane
- Fluorescein test
- Direct/indirect ophthalmoscopy
- Tonometry
- Gonioscopy
- Ultrasound
- Electrotretinography (ERG)
- Conjunctival smear
  - Chlamydia sp.
  - Canine distemper virus antigen
  - Feline Herpes virus antigen
  - Cytology
  - Bacterial culture

- Flushing of the tear duct
- Puncture of the vitreous body
  - Tumour cytology
  - Bacterial/fungal culture

### **4. Blood Tests**

- Hct, Ery, Leuc, Hb
- Na, K, Ca, P
- TP, Alb, Glob
- GPT, AP, Urea, Crea, BG
- FIP Profile [Cat]
  - TP
  - Alb/Glob ratio
  - Bili
  - GOT
  - Serum electrophoresis
- Diff BC

### **MICROBIAL SEROLOGY**

- FeLV-/FIV antigen [Cat]
- Toxoplasma antibodies
- Dirofilaria antigen [Dog]
- Lyme Borrelia antibodies [Dog]
- Ehrlichia antibodies [Dog]

### **FUNCTION TESTS**

- Adrenal gland function tests [Dog]
  - Dexamethasone Suppression test
  - ACTH Stimulation test

- Cortisol/Creatinine Ratio
  - T<sub>4</sub>, fT<sub>4</sub>
  - TSH/TRH Stimulation test [Dog]
  - T<sub>3</sub> Suppression test [Cat]
  - Nonne-Apelt Reaction)
  - Bacterial/fungal culture
  - Tumour cytology
  - Electrophoresis
  - Canine distemper antibodies [Dog]
  - Skull CT/MRT
  - X-Ray Study
  - (skull, thorax)
  - (Doppler) Echocardiography
  - Measure of blood pressure (indirect/direct)
- 5. Further Tests**
- Liquor puncture/analysis
    - Liquor pressure
    - Leucocyte number + Diff
    - TP, Glucose, CK
    - Globulin (Pandy and

## Strabismus

### Common Causes

Common Causes	
Dog	Cat
+++ Retrobulbar abscess/tumours	+++ Physiological in Siamese
++ Traumatic causes	++ Retrobulbar abscess/tumours
++ Cerebral causes	++ Traumatic causes
	++ Cerebral causes

## Unilateral Strabismus

### Towards medial

- Abducens nerve (CN VI) paralysis

### Towards ventrolateral

- Oculomotor nerve (CN-III) paralysis

- Facial nerve (CN-VII) paralysis

### Multidirectional

- Retrobulbar abscess/tumours/haemorrhage
- Orbital fracture
- Bulbus prolapse
- Trochlear (CN-IV) paralysis

## Bilateral Strabismus

### Towards medial

- Congenital defect in Siamese cats

### Towards ventrolateral

- Hydrocephalus

### Multidirectional

- Otitis interna
- Encephalitis
- Brain tumours

## Diagnostic Approach

### *Strabismus*

#### 1. Case History

#### 2. General Examination

#### 3. Ocular Examination

- Inspection
- Sight test
- Reflex responses
  - Sight test (II)
  - Menace reflex (II, VII)
  - Blink reflex (V, VII)
  - Corneal reflex (V, VII)
  - Pupillary reflex (II, III)
  - Pupillary symmetry/width
  - Eye movements (III, IV, VI)
  - Facial symmetry (VII)
- Direct/indirect ophthalmoscopy
- Ultrasound (Orbit)

#### 4. X-Ray Study

- Skull

# 10 Otological Principal Symptoms

Aural Discharge ..... 250

## Further Relevant Principal Symptoms

Ataxia (Ch. 7: Neurological Principal Symptoms) .....  
Loss of Hearing/Deafness (Ch. 7: Neurological Principal Symptoms) ....  
Head Tilt (Ch. 7: Neurological Principal Symptoms) .....  
Nystagmus (Ch. 7: Neurological Principal Symptoms) .....

## Aural Discharge

### Otorrhoea

#### Common Causes

Dog	Cat
+++ Bacterial Otitis	+++ Ear mite Otitis
++ Ear mite Otitis	++ Bacterial Otitis
++ Immunoreactive Otitis	++ Mycotic Otitis
++ Foreign body Otitis	++ Immunoreactive Otitis
++ Mycotic Otitis	+ Foreign body Otitis

## Ceruminal Discharge

### Otitis Externa

- Congenital Causes
  - Floppy ears
  - Anomalies of the ear canal
- Foreign body Otitis
  - Grass seeds
  - Hair
- Bacterial Otitis
  - *Staphylococcus* sp.
  - *Pseudomonas* sp.
- Mycotic Otitis
  - *Malassezia* sp.

- Candida sp.
- Aspergillus sp.
- Parasitic Otitis
  - Otodectes sp.
  - Notoedres sp. [Cat]
  - Demodex sp.
  - Sarcoptes sp.
  - Fly larvae
- Immunoreactive Otitis
  - Atopy
  - Ear mite allergy
  - Bacterial/fungal allergy
  - Drug allergy (topical aural medication)
- Tumours of the external ear canal
  - Polyp
  - Ceruminal adenoma/ carcinoma
  - Squamous cell carcinoma
  - Papilloma
  - Fibroma/Fibrosarcoma
- Seborrhoea

## Purulent Discharge

### Otitis Externa/Media

- Foreign body Otitis
  - Grass seeds
  - Hair
- Bacterial Otitis
  - Staphylococcus sp.

- Proteus sp.
- Pseudomonas sp.
- Parasitic Otitis
  - Otodectes sp.
  - Notoedres sp. [Cat]
  - Demodex sp.
  - Sarcoptes sp.
  - Fly larvae
- Tumours of the external ear canal
  - Polyp
  - Ceruminal adenoma/ carcinoma
  - Squamous cell carcinoma
  - Papilloma
  - Fibroma/Fibrosarcoma

## Haemorrhagic Discharge

- Traumatic Causes
  - Head injury
  - Foreign body
- Chronic bacterial Otitis
- Tumours of the external ear canal
  - Polyp
  - Ceruminal adenoma/ carcinoma
  - Squamous cell carcinoma
  - Papilloma
  - Fibroma/Fibrosarcoma

## Diagnostic Approach

### Aural Discharge

- 1. Case History**
- 2. General Examination**
- 3. Otoscopic Examination**
- 4. Examination of the Ear Secretion**
  - Cytology
  - Ear mites
  - Bacterial/fungal culture
- 5. Pharyngeal Examination**
- 6. X-Ray Study**
  - Skull (Tympanic bulla)
- 7. Blood Tests**
  - Hct, Ery, Leuc
  - Diff BC
  - TP
  - FC Receptor test

# 11 Dermatological Principal Symptoms

Hair Loss .....	253
Pruritus.....	255
Dermal Efflorescences.....	257
Topographic Distribution Pattern of Skin Diseases.....	261

## Hair Loss

### Alopecia

Common Causes	
Dog	Cat
Hair Loss with Pruritus	
+++ Ectoparasitosis	+++ Ectoparasitosis
+++ Pyoderma	+++ Allergy
++ Pyotraumatic Dermatitis	+ Dermatophytosis
++ Allergy	
+ Autoimmune Disease	
+ Dermatophytosis	
Hair Loss without Pruritus	
+++ Endocrine Causes	++ Psychogenic Causes
+++ Psychogenic Causes	+ Endocrine Causes
+ Toxic Causes	+ Toxic Causes

### Hair Loss with Pruritus

#### Infectious Causes

- Parasitic Dermatitis

#### Ticks

- Ixodes sp.
- Rhipicephalus sp.

**Mites**

- Demodex sp.
- Sarcoptes sp.
- Cheyletiella sp.
- Notoedres sp. [Cats]
- Neotrombicula sp.
- Dermatomyssus sp.
- Otodectes sp.

**Fleas**

- Ctenocephalides sp.
- Pulex sp.
- Archaeopsylla sp.
- Ceratophyllus sp.

**Lice**

- Linognathus sp. [Dog]

**Biting Lice**

- Trichodectes sp. [Dog]
- Felicola sp. [Cat]

**Protozoa**

- (Leishmania sp. [esp Dog])

**Nematodes (Larva migrans)**

- Ancylostoma sp.
- Uncinaria sp.
- Pelodera sp.
- Strongyloides sp.
- Trichobilharzia sp.
- (Dirofilaria sp.)
- (Dracunculus sp.)

- Mycotic Dermatitis
  - Microsporum sp.
  - Trichophyton sp.
  - Sporothrix sp.
  - Candida sp.
  - Mallassezia sp.
- Bacterial Dermatitis/ Pyoderma
  - Staphylococcus sp.
  - Streptococcus sp.

**E. coli**

- Proteus sp.
- Pseudomonas sp.
- Lyme Borrelia sp.  
[Dog]
- Rickettsial Dermatitis
  - (Ehrlichia sp. [esp Dog])
  - (Rickettsia sp.)

**Immunoreactive Causes**

- Atopy/Inhalation allergy
  - House dust, House dust mites
  - Epithelium (Dog, Cat, Human)
  - Feathers
  - Mould fungus
  - Pollen
- Parasitic allergy
  - Fleas/Ticks/Mites
  - Round-/Tapeworms
  - (Dirofilaria Microfilaria)
- Bacterial allergy
  - Staphylococcus sp.
- Food allergy
  - Soya/Maize/Oat meal
  - Peanuts
  - Animal Protein
  - Mould fungus
  - Food mites
  - Food additives
- Contact allergy
  - Plants
  - Local medication
  - Shampoo
  - Flea/Tick collars
  - Cat litter
  - Washing agents
  - Fertilizer
  - Household detergents

- Hormonal allergy
  - Endogenous progesterone
  - Endogenous oestrogens
- Fungal allergy
  - *Microsporum* sp.
  - *Candida* sp.
  - *Malassezia* sp.
- Autoimmune disease
  - Systemic Lupus erythematosus
  - Discoid Lupus erythematosus
  - Pemphigus foliaceus
  - Pemphigus vulgaris
  - Pemphigus erythematosus
  - (Pemphigus vegetans)
  - Bullous Pemphigoid [Dog]

## Other Causes

- Pyotraumatic dermatitis (hot spots)
- Keratinisation disturbances
  - Primary idiopathic Seborrhoea
  - Secondary keratinisation disturbances
- Skin tumours
  - Mast cell tumour
  - Basal cell tumour
  - Squamous cell carcinoma
  - Mycosis fungoides
  - Epitheliotrophic lymphoma

## Hair Loss Without Pruritus

### Congenital Causes

- Feline generalised alopecia [Sphinx cat]
- Alopecia of colour mutants
- Follicular dysplasia of the black hair
- Hairless dog breeds
- Feline hypotrichosis [Siamese Cat]
- Ectodermal defects (Ehlers-Danlos syndrome)
- Epidermal dysplasia [West Highland White Terrier]
- Lichenoid psoriasisiform
- Dermatosis [Springer Spaniel]
- Hypophyseal dwarfism [German Shepherd Dog]
- Dermatomyositis [Collie]

### Endocrine Causes

- Hypercortisolism (Cushing's disease) [esp Dog]
- Hypothyroidism [Dog]
- Hypophyseal dwarfism (STH deficiency) [Dog]
- Hyperoestrogenism
  - Sertoli cell tumour [Dog]
  - Cryptorchism
  - Ovarian cysts
  - Granulosa cell ovarian tumour
- Hypoestrogenism [esp Dog] Ovariectomy
- Hypoandrogenism [esp Dog]
- Hyperthyroidism [Cat]
- Diabetes mellitus

## Nutritional Causes

- Deficiency of essential fatty acids
- Vitamin A deficiency
- Vitamin E deficiency
- Biotin deficiency
- Zinc deficiency

## Psychogenic Causes

- Acral lick dermatitis [esp Dog]
- Feline neurodermatitis? [Cat]
- Feline psychogenic alopecia [Cat]
- Telogen/anagen defluvium [esp Cat]

## Toxic Causes

- Thallium poisoning

## Traumatic Causes

- Abrasive/bite/lick wounds
- Burns
- Chemical burns
- Solar dermatitis

## Other Causes

- Eosinophilic Granuloma [Cat]
- Paraneoplastic syndrome (Pancreatic tumour) [Cat]
- Pattern baldness [Dachshund]
- Yorkshire Terrier alopecia
- Acanthosis nigricans [Dachshund]

## Diagnostic Approach

### Hair Loss

#### 1. Case History

#### 2. General Examination

#### 3. Skin/Hair Examination

- Characterisation of the lesions
- Distribution
- Pattern of the lesions
- Flea comb examination
- Wood lamp
- Multiple Skin scrapes  
+/- Bacterial/fungal culture
- + Parasitological Examination
- + Cytological Examination
- Trichogram
- Skin biopsy

- Intracutaneous Allergy test (Prick Test)

#### 4. Blood Tests

- Hct, Ery, Leuc
- Diff BC
- TP, Alb, Glob
- Cholesterol
- GPT, AP, Urea, Crea, BG
- Serum electrophoresis
- Zinc, copper
- Thallium

## MICROBIAL SEROLOGY

- Sarcoptes antibodies [Dog]
- FeLV-/FIV Antigen [Cat]

- Leishmania antibodies [Dog]

**IMMUNOSEROLOGY**

- FC Receptor test
- Monoclonal antibodies Allergy test
- ANA-Test

**FUNCTION TESTS**

- T<sub>4</sub>, fT<sub>4</sub> [Dog]
- Thyroglobulin antibodies [Dog]

- TRH/TSH Stimulation test [Dog]
- Adrenal gland function tests [Dog]
  - Dexamethasone Suppression test
  - ACTH Stimulation test
  - Cortisol Creatinine Ratio
- STH Stimulation test [Dog]
- Oestradiol

**FAECAL EXAMINATION**

- Flotation

## Dermal Efflorescences

### Morphological classification of skin lesions

**Primary Efflorescences**

Patch (Macula):	Area of different colour, but with the same consistency and skin level
Pimple (Papula):	Up to pea sized, solid, non-mobile matter in the epidermis/dermis
Plaque:	Slab-like expansion of papules
Nodule (Nodus):	Larger than pea-sized, circumscribed, dermal/subcutaneous matter
Wheal (Urtica):	Circumscribed oedema of the upper dermis
Vesicle (Vesicula):	Fluid-filled intraepidermal/subepidermal cavity
Pustule (Pustula):	Pus-filled epidermal hollow
Atrophy:	Thinning of the skin (Ehlers-Danlos Syndrome)
Scales (Squama):	Loose epidermal components (exfoliation)

**Secondary Efflorescences**

Scales (Squama):	Loose epidermal components (exfoliation)
Scab (Crusta):	Dried secretion, blood, pus, cells and scales
Scar (Cicatrix):	Replacement tissue built of connective tissues after deep skin lesions have healed

Erosion (Erosio):	Superficial skin defect reaching the lower epidermal border (heals without scar)
Ulcer (Ulcus):	Deep skin defect reaching under the epidermal border (heals with scar formation)
Excoriation (Excoriatio):	Superficial separation of the epidermis by abrasion/licking or scratching

### Secondary Efflorescences

Rhagade/Fissure (Fissura):	Stab-like tearing of skin
Atrophy:	Thinning of the skin
Lichenification:	Areal skin thickening with hyperpigmentation
Hyper-/Hypopigmentation:	Patch-like colour changes of the skin
Necrosis:	dead tissue

## Primary Efflorescences

### Patch (Macula)

- Hyperpigmentation
  - Lentigo
  - (Melanoma)
- Hypopigmentation
  - Albinism
  - Alopecia of the colour mutants
  - Tyrosinase deficiency [Chow Chow]
  - Chediak-Higashi syndrome [Persian cats]
  - Cyclic neutropenia [Grey Collie]
  - Vitiligo

### Nodule (Nodus)

- Skin tumours
  - Squamous cell carcinoma
  - Basalioma
  - Mast cell tumour
  - Histiocytoma

- Cutaneous lymphosarcoma
- Lipoma/Liposarcoma
- Fibroma/Fibrosarcoma
- Melanoma
- Papilloma
- Trichoepithelioma
- Adenoma/adenocarcinoma (sebaceous/sweat/hepatoid gland, anal sac)
- Haemangioma/Haemangiosarcoma
- Intracutaneous cornifying epithelioma
- Dermal cysts
  - Sweat gland cyst
  - Sebaceous gland retention cyst [esp Dog]
  - Hair follicle cyst
  - Dermoid cyst [Dog]
- Granulomata
  - Bacterial granuloma
  - Actinomycosis
  - Callus/hygroma

- Eosinophilic granuloma [esp Cat]
- Foreign body granuloma
- Lick granuloma
- Mycobacterial granuloma [esp Cat]
- Sterile pyogranuloma
- Systemic mycosis
- Inflamed sebaceous gland [esp Dog]
- Larva migrans
- Other skin nodules
  - Nodular panniculitis [Dog]
  - Abscess
  - Haematoma
  - Furunculosis
  - Insect sting
  - Calcinoses cutis (Cushing's disease) [esp Dog]

### **Pimple (Papula)**

- Parasitic dermatitis
  - Ticks
  - Larva migrans
- Acne

### **Wheal (Urtica)**

- Allergic dermatitis
  - Food allergy
  - Contact allergy
  - Insect bite/sting allergy
  - Drug allergy
  - Intracutaneous allergy test

### **Small Vesicle/Vesicle (Vesicula/Bulla)**

- Allergic dermatitis
  - Contact allergy
- Autoimmune dermatitis

- Pemphigus vulgaris
- Bullous Pemphigoid [Dog]
- Viral dermatitis
  - Feline pox [Cat]
- Burn

### **Pustule (Pustula)**

- Bacterial dermatitis/ Pyoderma [esp Dog]

### **Scales (Squama)**

#### **Primary Keratinisation Disorders**

- Primary idiopathic seborrhoea
- Follicular dystrophy
- Vitamin A deficiency dermatosis
- Zinc deficiency dermatosis [Dog]
- Epidermal dysplasia [West Highland White Terrier]
- Lichenoid psoriasisiform dermatosis [Springer Spaniel]
- Schnauzer comedo syndrome [Dog]
- Canine ichthyosis [Dog]
- Idiopathic nasodigital hyperkeratosis [Dog]
- Canine seborrhoea of the ear edges [Dog]

#### **Secondary Efflorescences**

#### **Scales (Squama)**

#### **Secondary Keratinisation Disorder**

- Ectoparasitic dermatitis
- Bacterial dermatitis/ pyoderma [esp Dog]

- Allergic dermatitis
- Autoimmune dermatitis
- Endocrine dermatosis
- Supracaudal gland (Violet gland) dermatosis
- Inflamed sebaceous gland [esp Dog]
- (*Leishmania* sp. [esp Dog])

### **Scab (Crusta)**

- Bacterial dermatitis/Pyoderma [esp Dog]
- Parasitic dermatitis
  - Mites
- Autoimmune dermatitis
  - Pemphigus complex
  - Lupus erythematosus

### **Ulcer (Ulcus)**

- Bacterial dermatitis [esp Dog]
  - Folliculitis/Furunculosis
  - Pyotraumatic dermatitis (Hot spots)
- Parasitic dermatitis
  - Mites
- Viral dermatitis
  - Feline pox [Cat]
- Allergic dermatitis
  - Drug allergy
  - Flea allergy
- Autoimmune dermatitis
  - Pemphigus complex
- Skin tumours
- Granulomata
- Burns
- Toxic epidermal necrolysis
- Acral lick dermatitis

### **Erosion (Erosio)**

- Scratched/burst pustules, small vesicles, vesicles

### **Rhagade/Fissure (Fissura)**

- Dermatoses of the edge of the ear
- Pododermatitis
- Hyperkeratosis

### **Excoriation (Excoriatio)**

- Traumatic skin lesions
- Scratch wounds with pruritus

### **Scar (Cicatrix)**

- Traumatic skin lesion
- Deep pyoderma
- Secondary with Ehlers-Danlos syndrome
- Ulcers

### **Atrophy**

- Hypercortisolism (Cushing's disease) [esp Dog]
- Glucocorticoid long term therapy
- Lupus erythematosus

### **Necrosis**

- Traumatic skin lesions
- Burn/chemical burn
- Solar dermatitis
- Contact allergy dermatitis
- Toxic epidermal necrolysis
- Lupus erythematosus
- Deep pyoderma
- Vasculitis/Thromboembolism
- Gangrene

### **Lichenification**

- Chronic inflammation
- Acanthosis nigricans [Dog]
- Acral lick dermatitis
- Atopy/Inhalation allergy
- Flea allergy
- Sertoli cell tumour [Dog]

### **Hyperpigmentation**

- Chronic demodicosis [esp Dog]

- Chronic sarcoptic mange
- Chronic dermatophytosis
- Chronic pyoderma [esp Dog]
- Acanthosis nigricans [Dog]
- Hypercortisolism (Cushing's disease) [esp Dog]
- Sertoli cell tumour [Dog]
- Hypothyroidism [Dog]
- Hyperoestrogenism [esp Dog]

## Topographic Distribution Pattern of Skin Disease

### Head Region

- Parasitic dermatitis
  - Demodex sp. [esp Dog]
  - Notoedres sp. [Cat]
- Bacterial dermatitis
  - Pyoderma [esp Dog]
  - Pyotraumatic dermatitis (Hot spots) [Dog]
  - Feline Leprosy [Cat]
- Mycotic dermatitis
  - Microsporum sp.
  - Trichophyton sp.
  - Malassezia sp.
  - Sporothrix sp.
- Immunoreactive dermatitis
  - Atopy/inhalation allergy
  - Contact allergy
  - Food allergy
  - Pemphigus foliaceus
  - Pemphigus erythematosus
  - Discoid lupus erythematosus
- Skin tumours
  - Papilloma
  - Mast cell tumour
  - Histiocytoma [esp Dog]
  - Fibrosarcoma [esp Cat]
  - Melanoma [esp Dog]
  - Basal cell tumour [esp Dog]
- Nutritionally caused dermatosis
  - Zinc deficiency [Dog]

- Other skin disease
  - Trauma

### Auricular Region

- Parasitic dermatitis
  - Sarcoptes sp.
  - Notoedres sp. [Cat]
  - (Leishmania sp. [esp Dog])
- Skin tumours
  - Squamous cell carcinoma
  - Adenoma
- Autoimmune dermatitis
  - Pemphigus foliaceus
  - Pemphigus erythematosus
  - Lupus erythematosus
- Other skin diseases
  - Burn
  - Frost bite
  - Yorkshire Terrier alopecia
  - Otitis externa
  - Solar dermatitis
  - Dermatosis of the ear edge
  - Othaematoma
  - Local seborrhoea

### Ocular Region

- Parasitic dermatitis
  - Demodex sp. [esp Dog]
- Bacterial dermatitis/
  - Blepharitis/Folliculitis
- Mycotic dermatitis/ Blepharitis

- Microsporum sp.
- Trichophyton sp.
- Malassezia sp.
- Sporothrix sp.
- Candida sp.
- Immunoreactive dermatitis
  - Contact allergy
  - Pemphigus foliaceus
  - Pemphigus erythematosus
  - Lupus erythematosus
- Skin tumours
  - Sebaceous gland adenoma
  - Melanoma
- Other skin diseases
  - Conjunctivitis
  - Skin tumours
  - Chalazion/hordeolum
  - Seborrhoea

## Nasal Region

- Parasitic dermatitis
  - Demodex sp. [esp Dog]
  - Notoedres sp. [Cat]
  - (Leishmania sp. [Dog])
- Bacterial dermatitis
  - Pyoderma [esp Dog]
  - Folliculitis/furunculosis [esp Dog]
- Mycotic dermatitis
  - Microsporum sp.
  - Trichophyton sp.
  - Malassezia sp.
  - Sporothrix sp.
  - Candida sp.
- Immunoreactive dermatitis
  - Contact allergy
  - Insect sting/bite allergy
  - Pemphigus foliaceus
  - Pemphigus erythematosus

- Discoid Lupus erythematosus
- Skin tumours
  - Squamous cell carcinoma
  - Papilloma [esp Dog]

## Mucocutaneous Junctions

- Immunoreactive dermatitis
  - Contact allergy
  - Drug allergy
  - Pemphigus vulgaris
  - Bullous Pemphigoid [Dog]
  - Systemic Lupus erythematosus
  - Eosinophilic granuloma [esp Cat]
- Other skin diseases
  - Thallium poisoning
  - Skin tumours
- Skin tumours
  - Melanoma
  - Sarcoma

## Chin Region

- Parasitic dermatitis
  - Demodex sp. [esp Dog]
- Bacterial dermatitis/ Pyoderma [esp Dog]
- Other skin diseases
  - Acne

## Throat/Neck Region

- Immunoreactive dermatitis
  - Contact allergy (collar)
  - Flea allergy
  - Food allergy
- Bacterial dermatitis/ Pyoderma [esp Dog]
- Skin Tumours

- Basal cell tumour
- Fibroma/sarcoma [esp Cat]
- Cutaneous lymphosarcoma
- Epithelioma
- Dermal cysts
  - Dermoid cysts [esp Rhodesian Ridgeback]

## Axillar Region

- Immunoreactive dermatitis
  - Contact allergy
  - Atopy/Inhalation allergy
  - Pemphigus vulgaris
  - Bullous pemphigoid [Dog]
- Other skin diseases
  - Automutilation in case of pruritus
  - Acanthosis nigricans

## Sternal Region

- Immunoreactive dermatitis
  - Contact allergy
- Other skin diseases
  - Pressure sores (Callus) [Dog]

## Abdominal Region

- Immunoreactive dermatitis
  - Contact allergy
  - Food allergy
  - Drug allergy
  - Atopy/Inhalation allergy
  - Flea allergy
  - Eosinophilic granuloma/ Plaque [Cat]
  - Bullous pemphigoid [Dog]
- Bacterial dermatitis
  - Pyoderma [esp Dog]
  - Feline leprosy [Cat]

- Psychogenic Causes
  - Lick dermatitis [esp Cat]
- Endocrine dermatosis
  - Hypercortisolism (Cushing's disease) [esp Dog]
  - Symmetric alopecia [Cat]
- Parasitic dermatitis
  - Larva migrans
- Other skin diseases
  - Skin tumours (carcinoma, melanoma)

## Flank Region

- Endocrine dermatosis
  - Hypercortisolism (Cushing's disease) [esp Dog]
  - Hypothyroidism [Dog]
  - Hypophyseal dwarfism (STH deficiency) [Dog]
  - Hyperoestrogenism
  - Sertoli cell tumour [Dog]
  - Cryptorchism
  - Ovarian cysts
  - Granulosa cell ovarian tumour
  - Hypoestrogenism [esp Dog]
  - Hypoandrogenism [esp Dog]

## Dorsal Region

- Parasitic dermatitis
  - Fleas/Ticks/Mites/ Lice/ Biting lice
- Immunoreactive dermatitis
  - Flea allergy
  - Food allergy
  - Atopy/Inhalation allergy
- Psychogenic Causes

- Lick dermatitis [Cat]
- Mycotic dermatitis
  - Microsporum sp.
  - Trichophyton sp.
  - Malassezia sp.
  - Sporothrix sp.
- Bacterial dermatitis
  - Pyoderma/Folliculitis [esp Dog]
- Skin tumours
  - Cutaneous lymphosarcoma
  - Epithelioma
  - Mast cell tumour
  - Haemangioma [esp Dog]
  - Adenoma [esp Dog]
  - Fibrosarcoma [esp Cat]
  - Lipoma
- Other skin diseases
  - Seborrhoea
  - Dermal cysts/atheroma
  - Abscesses

## Tail Region

- Parasitic dermatitis
  - Fleas, intestinal parasites (esp Trichuris sp.)
- Bacterial dermatitis
  - Pyotraumatic dermatitis (Hot spots)
- Immunoreactive dermatitis
  - Flea allergy
  - Cold agglutination
- Psychogenic dermatosis
  - Lick dermatitis
- Other skin diseases
  - Tail tip necrosis
  - Hyperplasia of the supracaudal gland (Violet gland)
  - Perianal diseases

## Anal Region

- Anal sac abscess
- Perianal fistula [Dog]
- Perianal adenoma [Dog]
- Immunoreactive dermatitis
  - Bullous pemphigoid [Dog]
- Other diseases
  - Lick dermatitis
  - Chronic diarrhoea

## Limbs

- Psychogenic dermatosis
  - Acral lick dermatitis
- Other skin disease
  - Pressure sores (decubitus)
  - Hygroma
  - Haematoma
  - Phlegmon/abscess/foreign body
- Parasitic dermatitis
  - Demodex sp. [esp Dog]
  - Sarcoptes sp. [esp Dog]
  - Larva migrans
  - (Leishmania sp. [esp Dog])
- Bacterial dermatitis
  - Pyoderma/Folliculitis [esp Dog]
  - Pyotraumatic dermatitis (Hot spots)
  - Feline leprosy [Cat]
- Immunoreactive dermatitis
  - Contact allergy
  - Food allergy
  - Linear granuloma [Cat]
  - Pemphigus foliaceus
- Skin tumours
  - Squamous cell carcinoma
  - Melanoma

- Fibrosarcoma
- Lipoma

## Pads

- Hyperkeratosis
  - Canine distemper virus [Dog]
  - (*Leishmania* sp. [Dog])
- Pododermatitis [esp Cat]

## Claws

- Bacterial Paronychia
- Onychomycosis
  - *Trichophyton* sp.
  - *Microsporum* sp.
  - *Candida* sp.
- Onychorrhexis (brittle claws)
- Nutritional causes

- Microangiopathy (esp Diabetes mellitus, Autoimmune diseases, lymphatic leukaemia)

- Onychomadesis (shedding of the claws)
  - Autoimmune disease
  - Trauma
  - Bacterial/mycotic infection
- Hyperkeratosis
  - Hyperthyroidism [Cat]
  - Zinc deficiency [Dog]
  - Acromegaly [Dog]
  - (*Leishmania* sp. [esp Dog])
- Claw tumours
  - Squamous cell carcinoma
  - Melanoma

# **12 Toxicological Principal Symptoms**

---

Miscarriage .....	267
Anaemia, Aplastic .....	267
Anaemia, Haemolytic .....	268
Anaemia/Methaemoglobinæmia .....	268
Anaphylaxis .....	269
Ataxia .....	269
Respiratory Distress/Dyspnoea .....	270
Coagulopathies .....	271
Intestinal Spasms .....	272
Vomitus.....	272
Vomitus and Diarrhoea.....	273
Hair Loss .....	274
Skin Reactions, Allergic .....	274
Cardiac Arrhythmias, Bradycardic .....	275
Cardiac Arrhythmias, Tachycardic .....	276
Hypersalivation.....	276
Coma .....	277
Seizures .....	277
Hepatic Damage .....	279
Miosis.....	280
Mydriasis .....	280

Paresis/Paralysis .....	281
Tremor.....	281
Central Nervous Depression .....	282
Central Nervous Excitation .....	283
Cyanosis .....	283

# Symptoms of Poisoning

Common Causes	
Dog	Cat
+++ Medicines	+++ Medicines
+++ Dicoumarin derivatives (rat poison)	+++ Organophosphates (insecticides)
++ Metaldehyde (slug pellets)	++ Phenols (household cleaners)
++ Organophosphates (insecticides)	++ (Organic) chlorinated hydrocarbons
++ Heavy metals	++ Thallium (rat poisons)
++ Ethylene glycol (antifreeze)	++ Dicoumarin derivatives (rat poison)
+ Methanol (Alcohol)	+ Toxic plants
+ Toxic plants	

## Miscarriage

### Medicines

- Ergotamine
- Prostaglandins
- Cytostatics
- Bromocriptine
- Glucocorticoids
- Oestrogens
- Cabergoline
- Chloramphenicol

### Household Agents

- Fertilizers (Nitrites, Nitrates)

### Toxic Plants/Animals

- Ergot (*Secale alkaloids*)
- Parsley (*Petroselinum spp.*)
- Spanish Fly (*Cantharidin sp.*)
- Nutmeg (*Myristica sp.*)
- Juniper (*Juniperus spp.*)

- Toxic fungi (*Amanita spp.*, *Clitocybe spp.*)

### Other Poisons

- Heavy metals
  - Lead
  - Mercury
- Rodenticides
  - Thallium
  - Dicoumarin derivatives
- Toxic gases
  - CO<sub>2</sub>
  - NO<sub>2</sub>
- Nitrites/Nitrates

### Anaemia, Aplastic

### Medicines

- Antibiotics
  - Chloramphenicol
  - Tetracyclines
  - (Sulfonamides)

- NSAID
  - Phenylbutazone
  - Metamizole
  - Acetylsalicylic acid
- Cytostatics
- Ionising radiation
- Other medicines
  - Primidone
  - Oestrogens
  - Arsenic derivatives
  - Griseofulvin [esp Cat]

### **Other Toxins**

- Heavy metals
  - Lead
  - Aluminium
  - Cadmium

### **Anaemia, Haemolytic**

#### **Medicines**

- NSAID
  - Acetylsalicylic acid
  - Paracetamol
- Other medicines
  - Zinc
  - Benzocaine
  - Methionine [Cat]
  - Water enema [Cat]
  - Propylene glycol
  - Antiarrhythmics
  - Anticonvulsants
  - Cimetidine
  - Levamisole
  - Metronidazole
  - Griseofulvin [Cat]
  - Phenothiazine
  - Methylene blue
  - Vitamin K

### **Household Agents**

- Paint solvent (turpentine)
- Moth powder (naphthalene)
- Matches (potassium chlorate)
- Anionic detergents (quaternary ammonium cations)
- Furniture/Shoe polish
- Coins (Cu, Zn, Ni)

### **Toxic Plants/Animals**

- Snake venom
  - Common european viper (Vipera sp.)
  - Horn-nosed viper (Vipera sp.)
- Onions/Garlic/Broccoli
- Soft Maple (Acer sp.)
- Red Sage (Lantana sp.)
- Oleander (Nerium sp.)

### **Other Poisons**

- Heavy metals
  - Lead
  - Copper
  - Zinc
- Total herbicides
  - Sodium chlorate
  - Potassium chlorate

### **Anaemia/ Methaemoglobinæmia**

#### **Medicines**

- Paracetamol
- Methylene blue
- Toluidine blue
- Local anaesthetics
  - Benzocaine
  - Lidocaine

## Household Agents

- Fertilizer (Nitrates, Nitrites)
- Photo developer (p-Methylphenol)
- Shoe polish (Phenols)
- Household cleaners (Phenols)
- Matches (Potassium chloride)
- Cured products (Nitrites)

## Toxic Plants/Animals

- Solanum (Solanum sp.)
- Fool's Parsley (Aethusa sp.)

## Other Poisons

- Heavy metals
  - Copper
- Herbicides
  - Sodium chlorate
  - Potassium chlorate
- Aniline/Aniline dyes
- Nitrates/Nitrites

## Anaphylaxis

### Medicines

- Antibiotics
- Medicines
  - Penicillins
  - Cephalosporins
  - Sulfonamides
  - Local anaesthetics
  - Iron preparations
  - Dextranes
  - Organ extracts
  - Vaccines
  - Iodine preparations
  - Vitamin K<sub>1</sub> (i. v.)

- Radiographic contrast medium
- Hyposensibilisation antigens

## Household Agents

- Disinfection agents
- Household cleaner (Phenols)

## Toxic Plants/Animals

- Insect toxins
  - Wasp venom (Vespa sp.)
  - Bee venom (Apis sp.)
- Snake venom (Vipera sp.)
- Brown tail larva (Euproctis sp.)

## Ataxia

### Medicines

- Antibiotics/ Chemotherapeutic drugs
  - Metronidazole
  - Aminoglycosides
- Antiparasitic drugs
  - Praziquantel
  - Amitraz
  - Pyrethroids
  - Ivermectin
- NSAID
  - Acetylsalicylic acid
- Anticonvulsants
- Antihistamines
- Sedatives/Narcotics
- Other Medicines
  - Theophylline
  - Lidocaine
  - Tricyclic antidepressants
  - Dextromethorphan
  - Propylene glycol
  - H<sub>1</sub> Antagonists
  - Sodium phosphate [Cat]

## Household Agents

- Coffee/Tea (Caffeine)
- Chocolate (Theobromine)
- Tobacco (Nicotine)
- Drugs  
(Cannabis, LSD, Heroin)
- Moth Powder (Naphthalene)
- Alcohol
- Insect repellent  
(Diethyltoluamide, DEET)
- Furniture polish/Paint solvent  
(Turpentine)
- Fuel (petrol)
- Antifreeze  
(Ethylene glycol)
- Deodorant (p-Dichlorbenzole)
- Fertiliser (Nitrites/Nitrates)
- Disinfection agents (Phenols)
- Coins (Cu, Zi, Ni)

## Toxic Plants/Animals

- Chestnuts (*Aesculus* sp.)
- Lobelia (*Lobelia* sp.)
- Black Bindweed (*Tamus* sp.)
- Hemp (*Cannabis* sp.)
- Fool's Parsley (*Aethusa* sp.)
- Mistletoe (*Viscum* sp.)
- Corn lilies (*Veratrum* sp.)
- Spurge (*Euphorbia* sp.)
- Snake venoms (*Vipera* sp.)
- Spider venoms  
(esp *Loxosceles* spp.)
- Ochratoxins
- Botulism toxins

## Other Toxins

- Insecticides
  - Organophosphates
  - Carbamates
- Nicotine sulphates
- Pyrethrins/Pyrethroids
- Rodenticides
  - Thallium
  - Crimidine
  - ANTU
  - Sodium fluoroacetate
- Herbicides
  - Arsenic preparations
  - Diazine
- Heavy metals
  - Lead
  - Cadmium
  - Paraquat
  - Phenoxyacetate
  - Copper
- Toxic Gases
  - CO
  - NO/NO<sub>2</sub>
  - H<sub>2</sub>S

## Dyspnoea/Respiratory distress

## Medicines

- Antiparasitics
  - Ivermectin
  - Amitraz
  - Pyrethroids
  - Levamisole
- NSAID
  - Acetylsalicylic acid
  - Paracetamol
- Beta blockers  
(esp propranolol, metoprolol)
- Beta<sub>2</sub> Agonists
- Barbiturates
- Morphine/Morphine derivatives
- Curare/Succinylcholine

## Household Agents

- Fuel (petrol)
- Alcohols
- Sun screen products (Phenylbenzimidazoles)
- Fertiliser (Nitrates/Nitrites)
- Lamp/engine oils (Petrol distillates)
- Fire extinguisher (Chlorobromomethane)
- Sprays (Dichlormethane)
- Drain unblockers (NaOH, KOH)
- Furniture/Shoe polish (Turpentines)
- Firelighters (Metaldehyde)
- Matches (Potassium chlorate)

## Toxic Plants/Animals

- Lupines (*Lupinus* sp.)
- Yew tree (*Taxus* sp.)
- Hemp (*Cannabis* sp.)
- Golden chain (*Laburnum* sp.)
- Ground ivy (*Glechoma* sp.)
- Bitter almond tree (*Prunus* sp.)
- Fool's parsley (*Aethusa* sp.)
- Further high nitrate/nitrite containing plants
- Snake venoms (*Vipera* sp.)
- Spider venoms (esp *Loxosceles* sp.)

## Other Toxins

- Insecticides
  - Organophosphates
  - Carbamates
  - Nicotine sulphate
  - Pyrethrin/Pyrethroids
  - Rotenone

- Rodenticides
  - Dicoumarin derivatives
  - Strychnine
  - Phosphorus
  - Alpha-naphthylthiourea (ANTU)
  - Sodiumfluoroacetate
- Herbicides
  - Paraquat
  - Sodiumchlorate/Potassium chlorate
  - Nitrophenols
- Toxic gases
  - CO/CO<sub>2</sub>
  - H<sub>2</sub>S
  - HCN
  - Smoke
- Molluscicides
  - Metaldehyde
- Nitrates/Nitrites (Drinking water)

## Coagulopathies

### Medicines

- NSAID
  - Acetylsalicylic acid
- Heparin
- Warfarin/further coumarins/indandiones
- Further medicines
  - oestrogens
  - sulfonamides

## Toxic Plants/Animals

- Box wood (*Buxus* sp.)

## Other Toxins

- Rodenticides

- Dicoumarin derivatives
- Indandione derivatives

## Intestinal Spasms

### Medicines

- Theophylline
- Acetylcysteine

### Household Agents

- Coffee/Tea (Caffeine)
- Chocolate (Theobromine)
- Tobacco (Nicotine)
- Sun screen products (Phenylbenzimidazoles)
- Alcohols
- Detergents (cationic)
- Furniture polish/paint solvents (Turpentine)
- Glues (Acetone)
- Antifreeze (Ethylene glycol)
- Descaling agents (formic/acetic/oxalic acid)
- Bleaching agents (Hyperchloride)
- Metaldehyde
- Coins (Cu, Zi, Ni)
- Fireworks (Heavy metals, Salts)

### Toxic Plants/Animals

- Crown imperial (Gloriosa sp.)
- Wisteria (Wisteria sp.)
- Pokeweed (Phytolacca sp.)
- Elder (Sambucus sp.)
- Meadow Saffron (Colchicum sp.)
- Oleander (Nerium sp.)
- Irises (Iris sp.)

- Mistletoe (*Viscum* sp.)
- Privet (*Ligustrum* sp.)
- Corn lilies (*Veratrum* sp.)
- Cedars (*Thuja* sp.)
- Tulips (*Tulipa* sp.)
- Ricinus (*Ricinus* sp.)
- Solanum (*Solanum* sp.)
- Fruit pips/stones

### Other Toxins

- Insecticides
  - Organophosphates
  - Carbamates
  - Nicotine sulphate
- Rodenticides
  - Thallium
  - Zinc phosphide
- Herbicides
  - Paraquat
  - Nachlorate
- Heavy metals
  - Lead
  - Copper
- Molluscicides
  - Metaldehyde

## Vomitus

### Medicines

- Antibiotics
  - Tetracyclines
  - Chloramphenicol [Cat]
- Antiparasitics
- NSAID
  - Acetylsalicylic acid
  - Paracetamol
  - Ibuprofen
  - Indomethacin
- Cytostatics
- Beta<sub>2</sub> Agonists

- Apomorphine [Dog]
- Xylazine
- Syrup of Ipecac [Cat]
- Ephedrine
- Local anaesthetics
- Tricyclic Antidepressants
- Loperamide
- Bromocriptine
- Digitalis glycosides
- Ephedrine

### **Household Agents**

- Firelighters (Metaldehyde)
- Drain unblocking agents (NaOH, KOH)
- Spray solvents (Tetra)
- De-icing salts (NaCl, CaCl<sub>2</sub>)
- Denture cleaners (Perborate)
- Fireworks (Heavy metals, Salts)
- Antifreeze (Ethylene glycol)

### **Toxic Plants/Animals**

- European/English yew (*Taxus* sp.)
- Crown imperial (*Gloriosa* sp.)
- Daphne (*Daphne* sp.)
- Wild sage (*Lantana* sp.)

### **Other Toxins**

- Molluscicides
  - Metaldehyde
- Insecticides
  - Organophosphates
  - Carbamates

### **Vomitus and Diarrhoea**

### **Medicines**

- Antibiotics

- Antiparasitics
- NSAID/Glucocorticoids
- Cytostatics
- Theophylline
- Digitalis

### **Household Agents**

- Coffee/Tea (Caffeine)
- Chocolate (Theobromine)
- Tobacco (Nicotine)
- Moth balls (Naphthalene)
- Alcohols
- Insect repellent (Diethyltoluamide)
- Furniture polish/Paint solvent (Turpentine)
- Engine oils/fuels (Petrol distillates + Benzines)
- Antifreeze (Ethylene glycol)
- Detergents (anionic)
- Matches (Potassium chlorate)
- Glues (Acetone)
- Coins (Cu, Zi, Ni)
- Fertiliser (Nitrites, Nitrates)
- Photo developer (Boric acid, p-Methylphenol)

### **Toxic Plants/Animals**

- Aflatoxins
- Holly (*Ilex* sp.)
- Crab's Eye (*Abrusus* sp.)
- Nightshade family (*Solanum* sp.)
- Hortensia (*Hydrangea* sp.)
- Sheep laurel (*Kalmia* sp.)
- Chestnuts (*Aesculus* sp.)
- Rhododendron (*Rhododendron* sp.)
- Ranunculus (*Ranunculus* sp.)

- Manchineel tree  
(Hippomane sp.)
  - Primroses (Primula sp.)
  - Crown imperial (Gloriosa sp.)
  - Wisteria (Wisteria sp.)
  - Pokeweed (Phytolacca sp.)
  - Elder (Sambucus sp.)
  - Meadow saffron  
(Colchicum sp.)
  - Iris (Iris sp.)
  - Mistletoe (Viscum sp.)
  - Privet (Ligustrum sp.)
  - Boxwood (Buxus sp.)
  - Tetterwort (Chelidonium sp.)
  - Red bryony (Bryonia sp.)
  - Hemp (Cannabis sp.)
  - Lily of the Valley  
(Convallaria sp.)
  - Cedars (Thuja sp.)
  - Tulips (Tulipa sp.)
  - Onions/Garlic (Allium sp.)
  - Fruit pips/stones
- Nitrophenols
  - Heavy metals
    - Lead
    - Copper
    - Zinc
  - Fertilisers
    - NaCl
    - Nitrite
  - Toxic gases
    - CO/CO<sub>2</sub>
    - H<sub>2</sub>S
    - HCN
    - Smoke
  - Molluscicides
    - Metaldehyde

## Hair Loss

### Household Agents

- Household cleaners  
(Phenols)

### Other Toxins

- Insecticides
  - Organophosphates
  - Carbamates
  - Pyrethrin/Pyrethroids
  - Rotenone
  - Scilliroside
  - Bromethalin
- Rodenticides
  - Thallium
  - Zinc phosphide
  - Cholecalciferol
  - ANTU
  - Sodium fluoroacetate
- Herbicides
  - Arsenic preparations
  - Phenoxyacetate/carbonate

### Skin Reactions, Allergic

### Medicines

- Antibiotics
- Local anaesthetics  
(esp Benzocaine)
- Propylene glycol

## Household Agents

- Glues (Acetones)
- Furniture polish/Paint solvent (Turpentine)
- Fuels (petrols)
- Deodorants (p-Dichlorbenzole)
- Detergents (cationic)
- Disinfection agents (Phenols, Formaldehyde)
- Paint strippers (Phenols)
- Household cleaners (Phenols)
- Sprays (Xylool)

## Toxic Plants/Animals

- Ivy (*Toxicodendron* sp.)
- Calla lily (*Zantedeschia* sp.)
- Alocasia (*Alocasia* sp.)
- Elephant ear (*Caladium* sp.)
- Woolflowers (*Colocasia* sp.)
- Dumb canes (*Dieffenbachia* sp.)
- Philodendron (*Philodendron* sp.)
- Epipremnum (*Epipremnum* sp.)
- Chrysanthemum (*Chrysanthemum* sp.)
- Ranunculus (*Ranunculus* sp.)
- Machineel tree (*Hippomane* sp.)
- Primroses (*Primula* sp.)
- Amaryllis (*Hippeastrum* sp.)
- Brown tail caterpillar (*Euproctis* sp.)

## Other Toxins

- Anilin/Anilin dyes

### Cardiac Arrhythmias, Bradycardic

## Medicines

- Sedatives/Narcotics
  - Xylazine
  - Acepromazine
  - Halothane
  - Diazepam
- Atropine (paradoxic reaction)
- Butylscopolamine [Cat]
- Beta blockers
  - Propranolol/Metoprolol
- Lidocaine
- Phenytoin
- Procainamide
- Potassium chloride

## Household Agents

- Spray propellant gases (Propane, Butane)
- Spray solvents (Tri, Tetra)

## Toxic Plants/Animals

- Rhododendron (*Rhododendron* sp.)
- Bog Rosemary (*Kalmia* sp.)
- Monk's hood (*Aconitum* sp.)
- Calycanthus sp.
- Oleander (*Nerium* sp.)
- Corn Lilies (*Veratrum* sp.)
- Ground ivy (*Glechoma* sp.)
- Vipera sp.

## Cardiac Arrhythmias, Tachycardic

### Medicines

- Atropine
- Adrenalin
- Theophylline
- Calcium chloride
- Digitalis
- Beta<sub>2</sub> Agonists
- Tricyclic Antidepressants
- Antiectoparasitics  
(Pyrethrroids)

### Household Agents

- Coffee/Tea (Caffeine)
- Chocolate (Theobromine)
- Tobacco (Nicotine)
- Antifreeze (Ethylene glycol)
- Fire Lighters  
(Metaldehyde)

### Toxic Plants/Animals

- Belladonna (*Atropa* sp.)
- Fools' Parsley (*Aethusa* sp.)
- Jimson weed (*Datura* sp.)
- Oleander (*Nerium* sp.)
- Lily of the valley  
(*Convallaria* sp.)
- Tulips (*Tulipa* sp.)
- Crown imperial (*Gloriosa* sp.)
- Helleborus (*Helleborus* sp.)
- Red bryony (*Bryonia* sp.)
- Sea onion (*Urginea* sp.)
- Adder venom (*Vipera* sp.)
- Nose horned viper venom  
(*Vipera* sp.)
- Wasp venom (*Vespa* sp.)
- Toad venom (*Bufo* sp.)

## Other Toxins

- Rodenticides
  - Thallium
  - Scilliroside
- Molluscicides
  - Metaldehyde

## Hypersalivation

### Medicines

- Antiparasitics
  - Arecolin
  - Ivermectin
- Pyrethrin/Pyrethrroids

### Household Agents

- Insect repellent  
(Diethyltoluamide)
- Furniture polish/Paint solvent  
(Turpentine)
- Fuels (Petrol)
- Household cleaners (NaOH, KOH)
- Denture cleaners  
(Perborate)
- Sprays (Dichlormethane)
- Glass fibre wool
- Cured products (Nitrites)

### Toxic Plants/Animals

- Aflatoxins
- Rhododendrons  
(*Rhododendron* sp.)
- Bog Rosemary (*Kalmia* sp.)
- Monk's hood (*Aconitum* sp.)
- Dumb canes  
(*Dieffenbachia* sp.)
- Daphne (*Daphne* sp.)
- Larkspur (*Delphinium* sp.)

- Philodendrons (*Philodendron* sp.)
- Fungi (*Amanita* sp.)
- Rhubarb (*Rheum* sp.)
- Oleander (*Nerium* sp.)
- Fool's parsley (*Aethusa* sp.)
- Hemp (*Cannabis* sp.)
- Cedars (*Thuja* sp.)
- Tulips (*Tulipa* sp.)
- Monstera (*Monstera* sp.)
- Corn lilies (*Veratrum* sp.)
- Brown tail larvae (*Euproctis* sp.)

### Other Toxins

- Avicides
  - Aminopyridine
- Insecticides
  - Nicotine sulphate
  - Organophosphates
  - Carbamates
  - Pyrethroids
- Rodenticides
  - ANTU
  - Crimidine
- Molluscicides
  - Metaldehyde
- Herbicides
  - Phenoxyacetate
- Heavy metals
  - Copper (acute)

### Coma

### Medicines

- Narcotics
  - Barbiturates
- Antiectoparasitics
  - Ivermectin
  - Amitraz

- Theophylline
- Phenytoin
- Paracetamol

### Household Agents

- Coffee/Tea (Caffeine)
- Chocolate (Theobromine)
- Alcohols
- Furniture polish/Paint solvents (Turpentines)
- Engine oils (Petrol distillates)
- Fuels (petrols)
- Antifreeze (Ethylene glycol)
- Firelighters (Metaldehyde)
- Fire extinguisher (Chlorobromomethane)

### Toxic Plants/ Animals

- Rhododendrons (*Rhododendron* sp.)
- Belladonna (*Atropa* sp.)
- Helleborus (*Helleborus* sp.)
- Spider venoms

### Other Toxins

- Toxic Gases
  - $\text{H}_2\text{S}$
  - $\text{CO}/\text{CO}_2$
- Rodenticides
  - Zinc phosphide
  - HCN Gas
- Molluscicides
  - Metaldehyde

### Seizures

### Medicines

- Sedatives/Narcotics
  - Ketamine

- Antiparasitics
  - Praziquantel
  - Organophosphates
  - Carbamates
- Methylxanthins [Cat]
  - Caffeine
  - Theophylline
  - Theobromine
- NSAID
  - Acetylsalicylic acid [Cat]
  - Paracetamol [Cat]
- Cytostatics
  - 5-Fluorouracil
- Local anaesthetics
  - Lidocaine
- Pentetrazole
- Tricyclic antidepressants
- Lobelia (*Lobelia* sp.)
- Bog Rosemary (*Kalmia* sp.)
- Lupines (*Lupinus* sp.)
- Sweetshrub (*Calycanthus* sp.)
- Golden chain tree (*Laburnum* sp.)
- Oleander (*Nerium* sp.)
- Bitter almond tree (*Prunus* sp.)
- Cherry laurel (*Prunus* sp.)
- Helleborus (*Helleborus* sp.)
- Poinsettia plant (*Euphorbia* sp.)
- Dumb canes (*Dieffenbachia* sp.)
- Philodendron (*Philodendron* sp.)
- Monstera (*Monstera* sp.)

## Household Agents

- Coffee/Tea (Caffeine)
- Chocolate (Theobromine)
- Tobacco (Nicotine)
- Moth balls (Naphthalene)
- Alcohols
- Insect repellent  
(Diethyltoluamide)
- Furniture polish/paint solvents  
(Turpentine)
- Engine oils (Petrol distillates)
- Fuels (petrols)
- Antifreeze (Ethylene glycol)
- Anti-rust agents (Oxalic acid, NaF)
- Detergents (cationic)
- Disinfecting agents (Phenols)
- De-icing salts (NaCl, CaCl<sub>2</sub>)

## Toxic Plants/Animals

- Rhododendrons  
(*Rhododendron* sp.)

## Other Toxins

- Avicides
  - Aminopyridine
  - Cyanide/hydrocyanic acid
- Insecticides
  - Organophosphates
  - Carbamates
  - Pyrethrins/Pyrethroids
  - Nicotine sulphate
  - Chlorinated hydrocarbons
- Rodenticides
  - Thallium
  - Zinc phosphide
  - Cholecalciferol
  - Strychnine
  - Sodium fluoroacetate
  - Bromethaline
  - Crimidine
- Herbicides
  - Paraquat
  - Sodium chlorate
  - Diazine
- Heavy metals

- Lead
- Copper
- Arsenic
- Toxic gases
  - CO
  - H<sub>2</sub>S
  - NO/NO<sub>2</sub>
- Molluscicides
  - Metaldehyde
- Diazepam [Dog]
- Glucocorticoids
- Cytostatics
- Other medicines
  - Procainamide
  - Warfarin
  - Haloperidol
  - Phenothiazides
  - Cimetidine
  - Vitamin A
  - Megestrol acetate
  - Butylscopolamin [Cat]

## Hepatic Damage

### Medicines

- Antibiotics
  - Ampicillin
  - Erythromycin
  - Nitrofurantoin
  - Tetracyclines
  - Cyclosporin A [Cat]
- Antimycotics
  - Griseofulvin [Cats]
  - Ketoconazole
- Antiparasitics
  - Mebendazole
  - Oxibendazole
- NSAID
  - Paracetamol
  - Phenylbutazone
  - Naproxen
  - Acetylsalicylic acid
  - Ibuprofen
  - Indometacin
- Inhalation anaesthetics
  - Halothane
  - Methoxyflurane
- Anticonvulsants
  - Phenobarbitone [Dog]
  - Primidone

### Household Agents

- Paint solvents (Turpentine)
- Alcohols
- Fuels (Petrols)
- Dentures cleaners (Perborates)
- Sprays/Stain removers (Tetrachlorethylene)
- Coins (Cu, Zn)

### Toxic Plants/Animals

- Death cap fungus (*Amanita* sp.)
- Blue-green Algae
- Aflatoxins
- Ricinus (*Ricinus* sp.)
- Wild sage (*Lantana* sp.)

### Other Toxins

- Halogenated hydrocarbons
- Phosphorus
- Heavy metals
  - Iron
  - Copper
  - Zinc

**Miosis****Medicines**

- Pilocarpine
- Neostigmine
- Physostigmine
- Pyridostigmine
- Morphine/Morphine derivatives

**Household Agents**

- Tobacco (Nicotine)
- Recreational drugs (Heroin)

**Toxic Plants/Animals**

- Toadstool (*Amanita* sp.)
- Inocybe fungi (*Inocybe* sp.)
- Clitocybe mushroom (*Clitocybe* sp.)
- Panther cap (*Amanita* sp.)

**Other Toxins**

- Insecticides
  - Organophosphates
  - Carbamate

**Mydriasis****Medicines**

- Atropine
- Butylscopolamine
- Adrenalin
- Ephedrine/Pseudoephedrine
- Cyclic antidepressants

**Toxic Plants/Animals**

- Belladonna (*Atropa* sp.)
- Fungi (*Amanita* sp.)
- Fool's parsley (*Aethusa* sp.)

- Ground ivy (*Glechoma* sp.)
- Mistletoe (*Viscum* sp.)
- Jimson weed (*Datura* sp.)
- Solanum (*Solanum* sp.)

**Renal Damage****Medicines**

- Antibiotics
  - Ampicilline
  - Cephaloridine
  - Gentamicin
  - Kanamycin
  - Neomycin
  - Vancomycin
  - Bacitracin
  - Oxacillin
  - Penicillin
  - Polymyxin B
  - Sulfonamides
  - Tetracycline
- Antimycotics
  - Amphotericin B
- NSAID
  - Paracetamol
  - Phenylbutazone
  - Naproxen
  - Acetylsalicylic acid
  - Ketoprofen
  - Ibuprofen
- Methylxanthines
  - Caffeine
  - Theophylline
  - Theobromine
- Cytostatics
- Sodium phosphate [Cat]
- Other Medicines
  - Furosemide
  - Mannitol
  - Dextrans
  - Thiazide

- Captopril
- Penicillamin

- Lead
- Cadmium

## Household Agents

- Furniture polish/Paint solvent (Turpentine)
- Antifreeze (ethylene glycol)
- Deodorant (p-Dichlorbenzol)
- Alcohols
- Sun screen (Phenylbenzimidazoles)
- Anti-rust agents (Oxalic acid, NaF)
- Dentures cleaners (Perborates)
- Matches (Potassium chlorate)

## Toxic Plants/Animals

- Ochratoxins
- Crown Imperial (*Gloriosa* sp.)
- Dumb canes (*Dieffenbachia* sp.)
- Philodendron (*Philodendron* sp.)
- Flamingo plant (*Anthurium* sp.)
- Elephant ear (*Alocasia* sp.)
- Daphne (*Daphne* sp.)
- Ricinus (*Ricinus* sp.)
- Snake venom (*Vipera* sp.)

## Other Toxins

- Rodenticides
  - Thallium
  - Cholecalciferol
- Herbicides
  - Arsenic preparations
  - Paraquat
  - Sodium chlorate
- Heavy metals

## Paresis/Paralysis

### Medicines

- Curare
- Antiectoparasitics
  - Organophosphates
  - Carbamates
  - Pyrethroids
  - Ivermectin

## Toxic Plants/Animals

- Lupines (*Lupinus* sp.)
- Mistletoe (*Viscum* sp.)
- Snake venom (*Vipera* sp.)
- Tick venoms
- Botulism toxins

## Other Toxins

- Insecticides
  - Organophosphates
  - Carbamates
  - Pyrethroids
  - Chlorinated hydrocarbons
- Rodenticides
  - Thallium
  - Strychnine
  - Bromethalin
- Herbicides
  - Arsenic preparations
  - Nitrophenols
- Tricresyl phosphate

## Tremor

### Medicines

- Local anaesthetics

- Lidocaine
- Antiparasitics
  - Amitraz
  - Ivermectin
  - Pyrethroids
  - Lindane
- Beta<sub>2</sub> Agonists
- Tricyclic antidepressants
- Cytostatics
  - 5-Fluorouracil
- Theophylline
- Metoclopramide
- Diphenhydramine
- Ephedrine

### **Household Agents**

- Coffee/Tea (caffeine)
- Chocolate (Theobromine)
- Tobacco (Nicotine)
- Insect repellent  
(Diethyltoluamide)
- Paint solvent (Turpentine)
- Fuels (petrols)
- Moth balls (Naphthalene)
- Disinfection agents (Phenols)
- Spray propellant gas  
(propane, butane)

### **Toxic Plants/Animals**

- Lobelia (*Lobelia* sp.)
- Hemp (*Cannabis* sp.)
- Rushfoil (*Codium* sp.)
- Poinsettia plant (*Euphorbia* sp.)
- Jimson weed seeds  
(*Datura* sp.)

### **Other Toxins**

- Insecticides
  - Pyrethrins/Pyrethroids

- Nicotine sulphate
- Organophosphates
- Carbamates
- Molluscicides
  - Metaldehyde
- Herbicides
  - Phenoxyacetate
- Heavy metals
  - Lead

## **Central Nervous Depression**

### **Medicines**

- Sedatives/Narcotics
- Digitalis glycosides
- Loperamide
- Apomorphines
- Antihistamines
- Anticonvulsants

### **Household Agents**

- Antifreeze (ethylene glycol)
- Alcohols
- Detergents (quaternary ammonium cations)
- Furniture/Shoe polish  
(Turpentine, Turpentine alcohols)
- Engine oils (Petrol distillates)
- Fire extinguisher  
(Chlorobromomethane)
- Sour dough starter  
(Ethanol)

### **Toxic Plants/Animals**

- Black bryony (*Tamus* sp.)
- English yew (*Taxus* sp.)
- Japanese yew (*Taxus* sp.)

## Other Toxins

- Rodenticides
  - Cholecalciferol
- Heavy metals
  - Zinc
  - Cadmium
- Toxic gases
  - CO/CO<sub>2</sub>

## Central Nervous Excitation

### Medicines

- Paradox reactions
  - Acepromazine
  - Morphine [Cat]
- Methylxanthins
  - Caffeine
  - Theophylline
  - Theobromine
- Local anaesthetics

### Household Agents

- Coffee/Tea (Caffeine)
- Chocolate (Theobromine)
- Tobacco (Nicotine)
- Drugs (Amphetamines, Cocaine)
- Fuel fumes (petrols)
- Alcohols
- Furniture/Shoe polish (Turpentine)
- Disinfection agents (Phenols)
- Paint stripper (Phenols)

### Toxic Plants/Animals

- Lobelia (Lobelia sp.)
- Mistletoe (Viscum sp.)
- Cat mint (Nepeta sp.)

- Valerian (Valeriana sp.)
- Cat thyme (Teucrium sp.)
- Hemp (Cannabis sp.)

## Other Toxins

- Insecticides
  - Nicotine sulphates
  - Chlorinated hydrocarbons
- Rodenticides
  - Strychnine
  - Sodium fluoroacetate
- Herbicides
  - Paraquat
  - Nitrophenols
- Heavy metals
  - Lead
  - Copper
- Toxic gases
  - H<sub>2</sub>S

## Cyanosis

### Medicines

- Antiparasitics
  - Pyrethroids
- Paracetamol
- Barbiturates

### Household Agents

- Antifreeze (ethylene glycol)
- Matches (Potassium chlorate)
- Cured meats (Nitrites)
- Fertiliser (Nitrates/Nitrites)

### Toxic Plants/Animals

- Fool's parsley (Aethusa sp.)
- English yew (Taxus sp.)

## Other Toxins

- Insecticides
  - Organophosphates
  - Carbamates
- Rodenticides
  - Dicoumarin derivatives
  - ANTU
  - Zinc phosphide
- Herbicides
  - Paraquat
  - Sodium/Potassium chlorate
- Toxic gases
  - CO
  - NO<sub>2</sub>
  - H<sub>2</sub>S

# 13 Behavioural Disorders

---

Aggression .....	285
Allotriophagia.....	285
Fearfulness .....	286
Automutilation .....	286
Barking, Continuous .....	286
Micturition Problems.....	287
Hypersexuality/Nymphomania.....	287
Infanticide .....	287
Personality Change.....	287

## Behavioural Disorders

### Aggression

#### Psychogenic Causes

- Territorial behaviour
- Dominance behaviour
- Protective behaviour
- Competitive behaviour
- Playfulness
- Fear
- Attention seeking
- Envy
- Conditioning/Training
- Frustration
- Antisocial behaviour

#### Organic Causes

- Pain
- Postictal seizure phase
- Encephalitis

– Rabies

- Metabolic causes
  - Hypoglycaemia
- Toxic encephalopathy
  - Lead poisoning
  - Organophosphate poisoning
- Brain tumours
- Genetic/hormonal causes
  - Maternal protective instinct
  - Puppy's self-protective instinct
  - Breed predisposition?

### Allotriophagia (Compulsive Ingestion of Foreign Bodies)

#### Psychogenic Causes

- Stress
- Playfulness

## Organic Causes

- Exocrine pancreatic insufficiency
- Hypercortisolism (Cushing's disease) [Dog]
- Glucocorticoid therapy
- Enteral malabsorption
- Intestinal parasites
- Diabetes mellitus
- Hyperthyroidism [Cat]
- Crude fibre deficiency (Grass)
- Thiamine deficiency [Cat]
- Encephalitis
  - Rabies
- Brain tumours
- Neurotransmitter disturbances

## Fearfulness

### Psychogenic Causes

- Separation anxiety
- Understimulated/unsociable rearing
- Negative experiences [pain association]
- Phobias
  - Thunder/lightning phobia
  - Noise phobia
  - Stair/lift phobia

## Organic Causes

- Painful disease
- Encephalitis
- Metabolic encephalopathy
  - Thiamine deficiency [Cat]
- Toxic encephalopathy
  - Lead poisoning
  - Organophosphate poisoning
- Hyperthyroidism [Cat]

- Brain tumours
- Respiratory distress/Dyspnoea
- Congestive heart failure

## Aut mutilation

### Psychogenic Causes

- Acral lick dermatitis [Dog]
- Feline neurodermatitis [Cat]
- Feline lick granuloma [Cat]

## Organic Causes

- Pruritus
- Arthritis/Arthrosis
- Bone diseases
- Paronychia/Onychomycosis
- Neurotransmitter disturbances
  - Dopamine
  - Serotonin
  - Endorphines
- Sensibility disturbances
  - Feline neurodermatitis [Cat]
  - Polyneuropathy
  - Paresis

## Barking, Continuous

### Psychogenic Causes

- Separation anxiety
- Frustration/Boredom
- Territorial behaviour
- Fear
- Conditioning/Training
- Attention seeking

## Organic Causes

- Deafness
- Toxic encephalopathy
  - Lead poisoning

## Micturition Problems

### Psychogenic Causes

- Insufficient toilet training
- Excitement
  - fear
  - joy
- Territorial marking behaviour
- Unsuitable cat litter tray [Cat]
  - dirty
  - disturbing factors
- Frustration

### Organic Causes

- Urinary incontinence
- Polydipsia/Polyuria
- Painful muscular/ skeletal disease

## Hypersexuality/Nymphomania

### Psychogenic Causes

- Sexual frustration
- Bitch in season/queen on heat

### Organic Causes

- Ovarian cysts

## Infanticide (Killing and Ingestion of the Puppies/ Kittens)

### Psychogenic Causes

- Overreactive nesting behaviour

- Overreactive protective instinct
- Environmental disturbances

### Organic Causes

- Hormonal infantophobia
- Caesarian section
  - Ketamine anaesthesia

## Personality Change

### Psychogenic Causes

- Personality change in the attachment figure
- Stress
  - Household changes
  - New family member
  - Altered daily routine
  - Disturbing factors

### Organic Causes

- Brain tumours
- Encephalitis
- Granulomatous meningoencephalitis (GME)
- Metabolic encephalopathy
- Toxic encephalopathy
- Degenerative encephalopathy
- Congenital encephalopathy
- Cerebral circulatory disorder
- Traumatic brain injury
- Systemic disease
- Seizures

# 14 Paediatrics

Paediatric Diseases .....	288
Cardiac Diseases .....	289
Respiratory Diseases .....	289
Gastrointestinal, Liver and Pancreatic Diseases.....	289
Urinary Tract Diseases .....	290
Muscular/Bone Diseases .....	290
Skin Diseases.....	291
Central Nervous Diseases.....	292
Spinal Diseases .....	292
Ocular Diseases.....	293
Infectious Diseases .....	293
Metabolic Diseases.....	298
Immune System Diseases .....	299
Coagulopathies .....	299

## Paediatric Diseases

Important puppy/kitten diseases (from birth up to 6 months of age)

Common Causes	
Dog	Cat
+++ Gastrointestinal foreign bodies	+++ Cat flu
	++ FeLV/FIV
++ Intestinal parasites	++ Gastrointestinal foreign bodies
++ Invagination	
++ Hernias	++ Intestinal parasites
++ Hypertrophic osteodystrophy	++ Invagination
++ Hip dysplasia (HD)	++ Hernias
++ Cleft palate	++ Infectious skin diseases
++ Congenital cardiac deformation	++ Portosystemic shunt
++ Infectious skin disease	

<b>Common Causes</b>	
Dog	Cat
++ Portosystemic shunt	
+ Tumours (Histiocytoma, Papilloma)	

## Cardiac Diseases

### Congenital Diseases

- Patent ductus arteriosus (PDA)
- Subaortic stenosis [Dog]
- Stenosis of the pulmonary arteries
- Atrial septal defect (ASD)
- Ventricular septal defect (VSD)
- Dysplastic valves
- Tetralogy of Fallot
- Persistent right aortic arch
- Endocardial fibroelastosis [Cat]
- Ebstein anomaly

### Acquired Diseases

- Secondary cardiomyopathy
  - Parvovirus
  - Toxoplasma sp.
  - Electric shock
  - Trauma
  - Cor pulmonale
- Primary cardiomyopathy
  - Dilated cardiomyopathy
  - Hypertrophic cardiomyopathy

## Respiratory Diseases

### Congenital Diseases

- Tracheal hypoplasia [esp Dog]
- Diaphragmatic hernia
- Brachycephalic syndrome

- Stenotic nares
- Conchal anomalies
- Short pharyngeal space
- Mucosal hyperplasia
- Overlong soft palate
- Laryngeal collapse
- Tracheal hypoplasia
- Tracheal collapse [Dog]
- Laryngeal paralysis
- Ciliar dyskinesia
- Laryngeal stenosis
- Laryngeal hypoplasia
- Bronchial collapse
- Pulmonary emphysema
- Pectus excavatum

### Acquired Diseases

- Infectious rhinitis/sinusitis
- Trauma
- Foreign body rhinitis
- Infectious tracheobronchitis (Kennel cough) [Dog]
- Infectious pneumonia
- Aspiration pneumonia
- Pleuritis

## Gastrointestinal, Liver and Pancreatic Diseases

### Congenital Diseases

- Cleft palate
- Cleft lip

- Dental malposition
- Jaw anomalies
  - Prognathia superior/inferior
  - Brachygnathia superior/inferior
- Megaoesophagus
- Hiatic hernia
- Megacolon
- Portosystemic shunt
- Cricopharyngeal achalasia
- Oesophageal diverticuli
- Lymphangiectasia [Dog]
- Atresia ani/coli
- Rectovaginal fistula
- Hepatic cysts
- Pancreatic hypoplasia
- Copper storage disease [Dog]
- Glycogen storage disease

### **Acquired Diseases**

- Infectious stomatitis
- Toxic stomatitis
- Persistent deciduous teeth
- Dental enamel defects
- Tonsillitis
- Foreign bodies
- Hiatic hernia
- Gastrointestinal invagination
- Infectious gastroenteritis
- Overeating
- Intestinal parasites
- Lactose intolerance
- Infectious hepatitis
- Hepatic abscesses
- Neonatal icterus [esp Cat]
- Juvenile diabetes mellitus
- Oral papilloma [Dog]
- Rectal prolapse

## **Urinary Tract Diseases**

### **Congenital Diseases**

- Renal amyloidosis
- Polycystic kidneys
- Ectopic ureters
- Renal dysplasia
- Renal agenesis
- Cystine tubular resorption disturbance (Cystine uroliths) [esp Dog]
- Dalmatian urate defect (Urate uroliths) [Dog]
- Fanconi syndrome
- Nephroblastoma
- Persistent urachus

### **Acquired Diseases**

- (Struvite) Urolithiasis
- Infectious cystitis
- FLUTD [Cat]
- Trauma
- Pyelonephritis

## **Muscular/Bone Diseases**

### **Congenital Diseases**

#### **Bones**

- Chondrodysplasia [esp Dog]
- Hip dysplasia (HD) [esp Dog]
- Congenital patellar luxation
- Shoulder joint dysplasia [esp Dog]
- Elbow dysplasia [esp Dog]
- Tibial dysplasia [esp Dog]
- Radial agenesis
- Juvenile bone cysts
- Dwarfism (STH deficiency [Dog])
- Acromegaly (STH excess)

- Mucopolysaccharidosis Type I, VI [Siamese cat]
- Osteogenesis imperfecta
- Osteopetrosis
- Polydactyly

### **Muscles**

- Scotty Cramp [Dog]
- Golden Retriever myopathy [Dog]
- Labrador Retriever myopathy [Dog]
- Irish Terrier myopathy [Dog]
- Collie dermatomyositis [Dog]
- X-chromosomal muscular dystrophy [Dog]
- Congenital myotonia
- Glycogen storage disease
- Contraction of the infraspinous muscle [Dog]
- Contraction of the quadriceps muscle [Dog]

### **Neuromuscular**

- Myasthenia gravis

### **Acquired Diseases**

#### **Bones**

- Bone/Joint trauma
- Hypertrophic osteodystrophy [Dog]
- Osteochondrosis dissecans (OCD) [Dog]
- Isolated anconeal process [Dog]
- Fragmented medial coronoid process [Dog]
- Premature distal ulnar growth plate closure [Dog]
- Premature distal radial growth plate closure [Dog]
- Panosteitis [Dog]

- Aseptic femoral head necrosis (Legg–Calvé–Perthes Disease) [Dog]
- Weakness of the flexor tendon (Hyperextension syndrome)
- Growth plate damage/ premature closure
- Malnutrition
  - Vitamin A deficiency/ overload
  - Ca:P imbalance
  - Protein overload
- Craniomandibular osteopathy [Dog]
- Hypervitaminosis A [Cat]

### **Muscles**

- Feline hypokalaemia [Cat]
- Toxoplasma myositis
- Autoimmune myositis

### **Skin Diseases**

#### **Congenital Diseases**

- Acanthosis nigricans [Dog]
- Collagenoses/Collagenopathies (Ehlers–Danlos syndrome)
- Epitheliogenesis imperfecta
- Canine ichthyosis [Dog]
- Epidermolysis bullosa
- Acrodermatitis
- Congenital seborrhoea
- Acromutilation syndrome
- Dermoid cyst [esp Dog]
- Chediak–Higashi syndrome [Persian cats]
- Canine colour mutant alopecia [Dog]
- Hypotrichosis
- Hairless dog/cat breeds
- Follicular dysplasia of the black hair [Dog]

- Pattern baldness [Dachshund]
- Alopecia [Yorkshire terrier]
- Tyrosinaemia [Dog]
- Zinc reactive dermatosis [Dog]
- Vitiligo [Rottweiler]
- Paw collagenosis [German Shepherd Dog]
- Digital hyperkeratosis [Irish Terrier]
- Epidermal dysplasia [West Highland White Terrier]
- Cyclic neutropenia [Grey Collie]
- Psoriasisiform lichenoid dermatosis [Springer Spaniel]
- Mucinosis [Shar Pei]
- Hypophyseal dwarfism [German Shepherd Dog]
- Congenital hypothyroidism [Dog]
- Cerebellar hypoplasia
- Epilepsy
- Congenital vestibular disturbances/deafness
- Lissencephaly
- Meningoencephalocele
- Narcolepsy/Cataplexy
- Dys-/Hypomyelinogenesis
- Lysosomal storage disease
- Cerebellar abiotrophies
- Neuroaxonal dystrophy [Dog]
- Cerebellar degeneration [Bull Mastiff]
- Leucoencephalomyopathy [Rottweiler]
- White Dog Shaker syndrome [Dog]
- Necrotising encephalopathy [Yorkshire Terrier]

## Acquired Diseases

- Viral dermatitis
- Bacterial dermatitis
- Mycotic dermatitis
- Parasitic dermatitis
- Allergic dermatitis
- Toxic dermatitis
- Diet related dermatoses
- Puppy/kitten pyoderma/juvenile cellulitis
- Infantile pustulosis
- Feline eosinophilic granuloma [esp Cat]
- Traumatic skin diseases

## Central Nervous Diseases

### Congenital Diseases

- Hydrocephalus

### Acquired Diseases

- Parvoviral cerebellar hypoplasia
- Infectious encephalitis
- Meningoencephalitis
- Granulomatous meningoencephalitis (Reticulosis)
- Toxic encephalopathy
- Metabolic encephalopathy
- Head trauma

### Spinal Diseases

### Congenital Diseases

- Wobbler syndrome (atlantoaxial instability) [Dog]
- Atlantoaxial subluxation [Dog, Miniature breeds]
- Spina bifida
- Meningomyelocele

- Multiple cartilaginous exostoses (Osteochondromatosis)
- Fused/Hemivertebrae
- Lordosis/Kyphosis/Scoliosis
- Miniature poodle:  
Demyelopathy [Dog]
- Neuroaxonal dystrophy  
[Rottweiler]
- Hereditary ataxia
- [Jack Russell/Fox terrier]
- Myelomalacia [Afghan]
- Mucopolysaccharidosis  
[Siamese cats]
- Myelodysplasia [Weimaraner]
- Dermoid cysts [esp Dog]
- Feline sacrocaudal dysgenesis  
[Cat]
- Arachnoidal cysts
- Spinal stenosis
- Congenital corneal opacity
- Progressive retinal atrophy
- Coloboma
- Retinal dysplasia
- Eye anomaly [Collie/  
Sheltie]
- Eyelid agenesia
- Microphthalmus
- Enophthalmos
- Strabismus
- Feline mucopolysaccharidosis  
[Cat]
- Gangliosiderosis
- Mannosiderosis
- Congenital glaucoma
- Congenital lens opacity  
(cataract)
- Juvenile cataract
- Hypo-/aplasia of the optical  
nerve
- Congenital xerophthalmia

## Acquired Diseases

- Infectious meningoencephalitis
- Granulomatous meningoencephalomyelitis
- Discospondylitis/Osteomyelitis
- Feline hypervitaminosis A [Cat]
- Lymphosarcoma [esp Cat]
- Spinal trauma
- Necrotising vasculitis

## Ocular Diseases

### Congenital Diseases

- Distichiasis
- Entropium/ectropium
- Symblepharon
- Corneal/conjunctival dermoid
- Nasolacrimal duct stenosis
- Congenital keratoconjunctivitis  
sicca [esp Dog]

### Acquired Diseases

- Infectious keratoconjunctivitis
- Ulcerative keratitis
- Keratoconjunctivitis sicca
- Infectious uveitis
- Glaucoma
- Juvenile cataract

## Infectious Diseases

### Puppies

#### Viruses

- Distemper
  - Paramyxovirus
- Canine Parvovirosis
  - Parvovirus
- Canine Herpesvirosis
  - Herpes virus

- Canine Coronavirosis
    - Coronavirus
  - Canine infectious tracheobronchitis (CAV-2)
    - Canine parainfluenza virus
  - (Rabies
    - Rabies virus)
  - Pseudorabies/Aujeszky-Disease
    - Herpes virus suis
  - Hepatitis contagiosa canis
    - CAV-1
  - Tick borne encephalitis (TBE)
    - Flavivirus
- Bacteria**
- Coliform infections
    - *E. coli*, *Enterobacter* spp., *Klebsiella* spp., *Proteus* spp.
  - Lyme Borreliosis
    - *Borrelia burgdorferi*
  - Bordetellosis
    - *Bordetella bronchiseptica*
  - Streptococcosis
    - *Streptococcus* spp.  
Serogroup G, C, B
  - Staphylococcosis
    - *Staphylococcus* sp.
  - Salmonellosis
    - *Salmonella* spp.
  - Campylobacteriosis
    - *Campylobacter jejuni*
  - Mycobacteriosis
    - *Mycobacterium tuberculosis*, *M. bovis*, *M. avium*
  - Brucellosis
    - *Brucella canis*
  - Tyzzer Disease
    - *Bacillus piliformis*
  - Leptospirosis
    - *Leptospira* spp.
- Listeriosis
    - *Listeria monocytogenes*
  - Clostridiosis
    - *Clostridium difficile*, *Cl. perfringens*
  - Pasteurellosis
    - *Pasteurella multocida*
  - Mycoplasmosis
    - *Mycoplasma* spp.
  - Yersiniosis
    - *Yersinia* spp.
  - Tularaemia
    - *Francisella tularensis*
  - Actinomycosis
    - *Actinomyces* spp.
  - Nocardiosis
    - *Nocardia* spp.
  - L-phase infections
  - Tetanus
    - *Clostridium tetani*
  - Botulism
    - *Clostridium botulinum*
  - Helicobacteriosis
    - *Helicobacter pylori*
- Rickettsia**
- Q Fever
    - *Coxiella burnetti*
  - Ehrlichiosis
    - *Ehrlichia canis*
    - *Anaplasma phagocytophilum*
  - Rocky Mountain Spotted Fever
    - *Rickettsia rickettsii*
- Fungi**
- Dermatomycosis
    - *Microsporum* sp., *Trichophyton* sp., *Candida* sp., *Malassezia* sp.
  - Systemic mycosis
    - *Cryptococcus* sp., *Blastomycetes* sp.,

Coccidioides sp.,  
Histoplasma sp., Aspergillus  
sp., Sporothrix sp.

### **Protozoa**

- Giardiose
  - Giardia duodenalis
- Coccidiosis
  - Cystoisospora spp.,  
Toxoplasma sp.,  
Hammondia sp.,  
Sarcocystis sp.,  
Cryptosporidium sp.
- Babesiosis
  - Babesia canis
- Balantidiosis
  - Balantidium coli
- Pneumocystosis
  - Pneumocystis carinii
- Leishmaniosis
  - Leishmania donovani
- Amoebic dysentery
  - Entamoeba histolytica
- Hepatozoonosis
  - Hepatozoon canis
- Encephalitozoonosis
  - Encephalitozoon cuniculi

### **Trematodes**

- Liver fluke infestation
  - Opisthorchis sp.
- Intestinal fluke infestation
  - Alaria sp., Nanophyeltus sp.,  
Heterophyes sp.
- Lung fluke
  - Paragonimus sp.

### **Tape worms (Cestodes)**

- Dipylidiosis
  - Dipyldium caninum,  
Joyeuxiella spp.,  
Diplopylidium spp.
- Taeniose

– Taenia pisiformis, T. ovis,  
T. cervi, T. multi-ceps, T.  
hydatigena, T. serialis, T.  
crassiceps

- Mesocestoidosis
  - Mesocestoides lineatus, M.  
litteratus
- Echinococcosis
  - Echinococcus granulosus,  
(E. multilocularis)
- Diphyllobothriosis
  - Diphyllobothrium latum
- Spirometrosis
  - Spirometra spp.

### **Round Worms (Nematodes)**

- Round worm infestation
  - Toxocara canis, Toxascaris  
leonina
- Hook worm infestation
  - Ancylostoma caninum,  
Uncinaria stenocephala
- Whip worm infestation
  - Trichuris vulpis
- Lung worm infestation
  - Capillaria aerophila,  
Filaroides osleri, Crenosoma  
vulpis, Angiostrongylus  
vasorum
- Strongyloidosis
  - Strongyloides stercoralis
- Trichinellosis
  - Trichinella spiralis
- Stomach worm infestation
  - Spirocerca lupi
- Giant kidney worm infestation
  - Dioctophyme renale,  
Capillaria plica
- Heart worm infestation
  - Dirofilaria immitis
- Tongue worm infestation
  - Linguatula serrata

**Ticks**

- Common wood tick infestation
  - *Ixodes ricinus*
- Brown dog tick infestation
  - *Rhipicephalus sanguineus*

**Mites**

- Mange
  - *Demodex canis*, *Sarcoptes canis*, *Cheyletiella* sp.
- Harvest mite infestation
  - *Neotrombicula autumnalis*
- Red mite infestation
  - *Dermanyssus gallinae*
- Ear mite infestation
  - *Otodectes cynotis*

**Fleas**

- Dog flea infestation
  - *Ctenocephalides canis*
- Infestation with other species
  - *Pulex irritans*,
  - Ctenocephalides felis*,
  - Archaeopsylla erinacei*,
  - Ceratophyllus gallinae*

**Lice**

- Dog louse infestation
  - *Linognathus setosus*

**Biting lice**

- Canine chewing louse infestation
  - *Trichodectes canis*

**Kittens****Viruses**

- Cat flu
  - Calici virus, Herpes virus, Reovirus, Parainfluenza virus
- Feline Leukaemia
  - FeLV
- Feline Immunodeficiency
  - FIV

- Feline Infectious peritonitis
  - FIP Coronavirus
- Parvovirosis/feline panleucopenia
  - Parvovirus
- (Rabies)
  - Rabies virus)
- Pocks
  - Orthopoxvirus
- Feline Rotavirosis/feline astrovirosis
  - Rotavirus/Astrovirus
- Pseudorabies/Aujeszky-Disease
  - Herpes virus suis

**Bacteria**

- Streptococcosis
  - *Streptococcus* spp.  
Serogroup G, C, B
- Staphylococcosis
  - *Staphylococcus* spp.
- Chlamydiosis
  - *Chlamydia psittaci*
- Pasteurellosis
  - *Pasteurella multocida*
- Mycoplasmosis
  - *Mycoplasma* spp.
- Salmonellosis
  - *Salmonella* spp.
- Campylobacteriosis
  - *Campylobacter jejuni*
- Coliform infections
  - *E. coli*, *Enterobacter* sp., *Klebsiella* sp., *Proteus* sp.
- Mycobacteriosis
  - *Mycobacterium tuberculosis*, *M. bovis*, *M. avium*, *M. lepraeumurium*
- Tyzzer Disease
  - *Bacillus piliformis*
- Lyme Borreliosis
  - *Borrelia burgdorferi*

- Listeriosis
  - *Listeria monocytogenes*
- Clostridiosis
  - *Clostridium difficile*
- Bordetellosis
  - *Bordetella bronchiseptica*
- Yersiniosis
  - *Yersinia* spp.
- Tularaemia
  - *Francisella tularensis*
- Actinomycosis
  - *Actinomyces* spp.
- Nocardiosis
  - *Nocardia* spp.
- L-phase infections
- Helicobacteriosis
  - *Helicobacter pylori*

### Rickettsia

- Haemobartonellosis
  - *Haemobartonella felis*
- Ehrlichiosis
  - *Ehrlichia canis*
- Q Fever
  - *Coxiella burnetii*

### Fungi

- Dermatomycosis
  - *Microsporum* sp.,  
*Trichophyton* sp., *Candida*  
 sp., *Malassezia* sp.
- Systemic mycosis
  - *Cryptococcus* sp.,  
*Blastomyces* sp.,  
*Coccidioides* sp.,  
*Histoplasma* sp., *Aspergillus*  
 sp., *Sporothrix* sp.

### Protozoa

- Giardiosis
  - *Giardia duodenalis*
- Coccidiosis
  - *Cystoisospora* spp.,  
*Toxoplasma* sp.,

*Hammondia* sp., *Besnoitia*  
 sp., *Sarcocystis* sp.,  
*Cryptosporidium* sp.

- Leishmaniosis
  - *Leishmania donovani*
- Pneumocystosis
  - *Pneumocystis carinii*
- Babesiosis
  - *Babesia felis*
- Cytauxzoonosis
  - *Cytauxzoon felis*

### Trematodes

- Liver fluke infestation
  - *Opisthorchis felineus*,  
*Heterophyes* sp.

### Tapeworms (Cestodes)

- Dipylidiosis
  - *Dipylidium caninum*,  
*Joyeuxiella* spp.,  
*Diplopylidium* spp.
- Taeniosis
  - *Taenia taeniaeformis*
- Diphyllobothriosis
  - *Diphyllobothrium latum*
- (Echinococcosis)
  - *Echinococcus multilocularis*
- Mesocestoidosis
  - *Mesocestoides lineatus*, *M. litteratus*

### Round Worms (Nematodes)

- Common round worm infestation
  - *Toxocara cati*, *Toxascaris leonina*
- Hook worm infestation
  - *Ancylostoma tubaeforme*, *Uncinaria stenocephala*
- Stomach worm infestation
  - *Ollulanus tricuspis*

- Giant kidney worm infestation
  - Dioctophyme renale,
  - Capillaria plica
- Lung worm infestation
  - Capillaria aerophila,
  - Crenosoma vulpis,
  - Aelurostrongylus abstrusus
- Heart worm infestation
  - Dirofilaria immitis
- Tongue worm infestation
  - Linguatula serrata
- Trichinellosis
  - Trichinella spiralis

### Ticks

- Common wood tick infestation
  - Ixodes ricinus
- Brown dog tick infestation
  - Rhipicephalus sanguineus

### Mites

- Mange
  - Demodex cati, Sarcoptes spp., Cheyletiella sp., Notoedres cati
- Harvest mite infestation
  - Neotrombicula autumnalis
- Red mite infestation
  - Dermanyssus gallinae
- Ear mite infestation
  - Otodectes cynotis

### Fleas

- Cat flea infestation
  - Ctenocephalides felis
- Infestation with other species
  - Pulex irritans,
  - Ctenocephalides canis,
  - Archaeopsylla erinacei,
  - Ceratophyllus gallinae

### Biting Lice

- Cat chewing louse
  - Felicola subrostratus

## Metabolic Diseases

### Congenital Diseases

- Enzyme deficiency diseases (Fructose-/lactose intolerance)
- Hypophyseal dwarfism [Dog]
- Congenital diabetes insipidus centralis/renalis [Dog]
- Congenital primary hyperparathyroidism
- Congenital hypothyroidism
- Glycogen storage disease

### Acquired Diseases

- Juvenile diabetes mellitus
- Hypoglycaemia
- Hypophyseal dwarfism [Dog]
- Secondary parathyroidism (alimentary/renal causes)
- Hypocortisolism (Addison's disease) [Dog]

### Diet-Related Diseases

- Hypertrophic osteodystrophy [Dog]
  - Calcium excess, phosphate deficiency, protein excess
- Feline hypokalaemia [Cat]
- Malnutrition
- Secondary parathyroidism (Calcium deficiency, Phosphate excess)
- Hypervitaminosis D
- Osteomalacia/Rachitis (Vitamin D deficiency)
- Thiamine deficiency/Vitamin B1 deficiency [Cat]
- Taurine deficiency [esp Cat]
- Carnitine deficiency [esp Dog]

- Hypervitaminosis A [Cat]
- Vitamin E deficiency [Cat]

## Immune System Diseases

### Congenital Immunosuppression

- X-chromosomal combined immune deficiency [Basset Hound]
- Cyclic neutropenia [Grey Collie]
- Thymal hypoplasia
- IgA deficiency [German Shepherd Dog, Beagle, Shar Pei]
- IgM deficiency [Dobermann]
- C3 deficiency [Brittany Spaniel]
- Chediak-Higashi syndrome [Persian cat]
- Mucopolysaccharidosis [Siamese cat, Short-haired cat]
- Leucocyte adhesion defect [Irish Setter]

### Acquired Immunosuppression

- Malnutrition/ Colostrum deficiency
- Viral immunosuppression
  - FeLV/FIV [Cat]
  - Canine distemper virus [Dog]
  - Parvovirus
- Associated pathogens
  - Demodex sp.
  - Toxoplasma sp.
  - Microsporum sp.
  - Trichophyton sp.
  - Aspergillus sp.
  - Candida sp.

- Cryptococcus sp.
- Nocardia sp.
- Pneumocystis sp.
- Listeria sp.
- Pseudomonas sp.
- Staphylococcus sp.
- (Ehrlichia sp.)
- Medical immunosuppression
  - Glucocorticoids
  - Cytostatics
- Other Causes
  - Splenectomy
  - Bone marrow damage
  - Bone tumours/malignant tumours

## Allergic Diseases

- Neonatal isoerythrolysis [Cat]
- Atopy/Inhalation allergy
- Contact allergy
- Flea allergy
- Drug allergy
- Food allergy
- Insect bite/sting allergy
- Blood transfusion incompatibility

## Coagulopathies

### Congenital Diseases

#### Thrombocytopenia

- Cyclic neutropenia [Grey Collie]

#### Thrombocytopathy

- Von Willebrand syndrome [esp Dog]
- Canine thrombopathy [Dog]
- Thrombasthenia (Glanzmann) [Dog]

- Chediak-Higashi syndrome [Cat]
- Ehlers-Danlos syndrome

### **Plasmatic Coagulopathies**

- Factor VIII deficiency (Haemophilia A)
- Factor IX deficiency (Haemophilia B)
- Von Willebrand syndrome [esp Dog]
- Factor VII deficiency [Dog]
- Factor X deficiency [Dog]
- Factor XI deficiency [Dog]
- Factor XI deficiency (Hagemann) [Cat]

## **Acquired Diseases**

### **Thrombocytopenia**

- Infectious thrombocytopenia
- Immunothrombocytopenia
- Disseminated intravasal coagulation (DIC)
- Bone marrow damage

### **Thrombocytopathy**

- Drugs
- Hyperviscosity syndrome
- Organ failure

### **Plasmatic Coagulopathies**

- Disseminated intravasal coagulation (DIC)
- Vitamin K deficiency/antagonism
- Drugs

# 15 Geriatrics

## Geriatric Diseases

Important illnesses of advanced age

### Common Causes

Dog	Cat
+++ Hip joint arthrosis (Coxarthrosis)	+++ Diabetes mellitus
++ Dilated cardiomyopathy	++ Hyperthyroidism
++ Mitral valve fibrosis	++ Feline asthma
++ Diabetes mellitus	++ Hypertrophic/dilated cardiomyopathy
++ Tumour disease	++ Chronic renal failure
++ Prostatic disease	
++ Chronic gastroenteritis	++ Cholangiohepatitis
++ Hypercortisolism	++ Tumour disease

<b>Common Causes</b>	
Dog	Cat
++ Cardiac Arrhythmias (Cushing's disease)	++ Cardiac Arrhythmias
++ Lens opacity/cataract	
+ Hearing loss	

## Cardiac Diseases

### Acquired Diseases

- Primary cardiomyopathy
  - Dilated cardiomyopathy [esp Dog]
  - Hypertrophic cardiomyopathy [esp Cat]
  - Restrictive cardiomyopathy
- Secondary cardiomyopathy
  - Toxoplasmosis
  - Taurine/Carnitine deficiency
  - Cor pulmonale
  - Hyperthyroidism [Cat]
  - Hypothyroidism [Dog]
  - Hypo-/Hyperkalaemia
  - Hypo-/Hypercalcaemia
  - Diabetes mellitus
  - Hypercortisolism (Cushing's disease) [Dog]
  - Uraemia
  - Renal hypertension
  - Acromegaly
  - Glycogen storage disease
  - Infectious myocarditis
  - Allergic myocarditis
  - Toxic myocarditis
  - Traumatic myocarditis

- Heart valve diseases
  - Mitral valve fibrosis
  - Tricuspid valve fibrosis
  - Bacterial endocarditis
- Cardiac arrhythmias
- Feline aortic thrombosis [esp Cat]
- Pericardial diseases

### Tumour Diseases

- Haemangiosarcoma [esp Dog]
- Heart base tumour (Chemodectoma [esp Dog])
- Thyroid carcinoma
- Mesothelioma
- Lymphosarcoma [esp Cat]
- Tumour metastasis

## Respiratory Diseases

### Acquired Diseases

- Tracheal collapse
- Infectious bronchopneumonia
- Allergic bronchopneumonia (feline asthma)
- Pulmonary oedema
- Pleuritis/Mediastinitis
- Chronic rhinitis/sinusitis

- Laryngeal paralysis
- Pulmonary thromboembolism

## Tumour Diseases

### Tumours of the Nasal Cavity

- Squamous cell carcinoma
- Adenocarcinoma
- Osteosarcoma
- Chondrosarcoma
- Fibrosarcoma
- Myxosarcoma
- Haemangioendothelioma
- Lymphosarcoma [esp Cat]
- Nasopharyngeal polyps [Cat]

### Laryngeal Tumours

- Lymphosarcoma [esp Cat]
- Squamous cell carcinoma
- Adenocarcinoma

### Tracheal Tumours

- Squamous cell carcinoma
- Adenocarcinoma

### Primary Lung Tumours

- Squamous cell carcinoma
- Adenocarcinoma

### Metastatic Lung Tumours

- Mammary carcinoma
- Prostatic carcinoma
- Thyroid carcinoma
- Lymphosarcoma [esp Cat]
- Malignant histiocytosis [Bernese Mountain Dog]
- Malignant melanoma
- Haemangioendothelioma

### Mediastinal Tumours

- Heart base tumour (Chemodectoma) [esp Dog]
- Thyroid carcinoma
- Mesothelioma
- Lymphosarcoma [esp Cat]

## Gastrointestinal Diseases

### Acquired Diseases

- Periodontal Disease
  - Plaque/tartar
  - Feline odontoclastic resorptive lesions [Cat] (FORL)
  - Decay
  - Dental abscess
  - Dental fracture
  - Oronasal fistula
  - Periodontitis
- Stomatitis/Gingivitis/Glossitis
- Pharyngitis/Laryngitis
- Chronic gastroenteritis/ colitis
  - Pyloric stenosis [esp Dog]
  - Motility disturbances
  - Gastric-/intestinal ulcer
  - Infectious gastroenteritis
  - Allergic gastroenteritis
  - Toxic gastroenteritis
  - Lymphangiectasia [Dog]
  - Hyperthyroidism [Cat]
  - Organ failure
- Gastric dilation/volvulus [Dog]
- Constipation
- Anal sac impaction/abscess
- Perineal hernia
- Megaoesophagus
- Megacolon

## Tumour Diseases

### Tumours of the Oral Cavity

- Epulis [esp Dog]
- Papilloma [esp Dog]
- Squamous cell carcinoma
- Fibrosarcoma

- Melanoma
- Salivary gland adenoma/  
carcinoma

### **Pharyngeal Tumours**

- Nasopharyngeal polyps [Cat]
- Squamous cell carcinoma
- Tonsillar carcinoma
- Lymphosarcoma

### **Oesophageal Tumours**

- Squamous cell carcinoma

### **Gastric/Intestinal Tumours**

- Adenocarcinoma
- Squamous cell carcinoma
- Lymphosarcoma [esp Cat]
- Leiomyoma
- Polyps

### **Perianal Tumours**

- Hepatoid gland adenoma/  
carcinoma [Dog]
- Anal sac carcinoma

## **Hepatic/Exocrine Pancreatic Diseases**

### **Acquired Diseases**

- Liver cirrhosis
- Cholangitis/cholangiohepatitis [esp Dog]
- Secondary hepatopathy
  - Diabetes mellitus
  - Hypercortisolism (Cushing's disease) [Dog]
  - Right-sided heart failure
  - Lipidosis
  - Hyperthyroidism [Cat]
  - Acute pancreatitis
- Acute pancreatitis
- Exocrine pancreatic insufficiency
- Infectious hepatitis

- Toxic hepatitis
- Liver cysts/Bile duct cysts

### **Tumour Diseases**

- Hepatocellular adenoma/  
carcinoma
- Cholangioadenoma/-  
carcinoma
- Haemangioma/  
Haemangiosarcoma
- Pancreatic adenoma/  
carcinoma
- Lymphosarcoma  
[esp Cat]
- Tumour metastasis

## **Urinary Tract Disease**

### **Acquired Diseases**

- Acute/chronic renal failure
- Cystitis
- Pyelonephritis
- Urolithiasis
- Feline lower urinary tract disease (FLUTD) [Cat]
- Urinary incontinence

### **Tumour Diseases**

#### **Renal Tumours**

- Renal cell carcinoma
- Nephroblastoma
- Lymphosarcoma [esp Cat]
- Tumour metastasis

## **Urinary Bladder Tumours**

- Transitional cell carcinoma
- Papilloma
- Lymphosarcoma [esp Cat]

## Blood/Splenic Diseases

### Acquired Diseases

- Anaemia
  - Haemolytic anaemia
  - Aplastic anaemia
  - Blood loss anaemia
- Splenic rupture  
[esp Dog]
- Coagulopathies
  - Thrombocytopenia
  - Thrombocytopathy
  - Plasmatic coagulopathy

### Tumour Diseases

#### Lymphatic Tumours

- Lymphosarcoma/Leukaemia  
[esp Cat]
- Lymphatic leukaemia  
[esp Cat]
- Plasmacytoma/multiple myeloma [esp Dog]
- Thymoma

#### Myeloid Tumours

- Myeloid leukaemia
- Erythroid leukaemia
- Polycythaemia vera
- Megakaryocyte leukaemia
- Monocyte leukaemia

#### Splenic Tumours

- Haemangioendothelioma  
[esp Dog]
- Lymphosarcoma  
[esp Cat]

#### Other Tumours

- Mast cell tumour [esp Dog]
- Malignant histiocytosis  
[Bernese Mountain Dog]

## Metabolic Diseases

### Acquired Diseases

#### Primary Metabolic Diseases

- Diabetes mellitus
- Hyperthyroidism [Cat]
- Hypoglycaemia  
(Hyperinsulinism)
- Hypercortisolism (Cushing's disease) [Dog]
- Feline hypokalaemia [Cat]
- Obesity
- Diabetes insipidus (central/renal)
- Hypothyroidism [Dog]
- Secondary parathyroidism (alimentary/renal)
- Hypocortisolism (Addison's disease) [Dog]
- Glycogen storage disease

#### Diet-Related Diseases

- Hypervitaminosis A [Cat]
- Thiamine deficiency [Cat]
- Taurine deficiency
- Carnitine deficiency

### Tumour Diseases

- Hypophyseal adenoma
- Thyroid adenoma/carcinoma
- Parathyroid adenoma
- Phaeochromocytoma (tumour of the adrenal medulla)
- Insulinoma
- Gastrinoma

## Central Nervous Diseases

### Acquired Diseases

- Metabolic encephalopathy

- Granulomatous meningoencephalitis/reticulosis
- Geriatric peripheral vestibular syndrome
- Gradual age-related hearing loss (Presbyacusis)
- Cerebral circulatory disorders
- Seizures
- Encephalomeningitis

## Tumour Diseases

- Lymphosarcoma [esp Cat]
- Meningeoma [esp Cat]
- Ependymoma
- Astrocytoma
- Oligodendrogioma
- Medulloblastoma
- Vestibular Schwannoma

## Spinal Diseases

### Acquired Diseases

- Spondylosis deformans
- Degenerative discopathy
- Lumbosacral stenosis (Cauda equina syndrome)
- Degenerative myelopathy
- Dura mater ossification
- Discospondylitis/Osteomyelitis
- Fibrocartilaginous embolism
- Thromboembolism
- Spinal trauma

## Tumour Diseases

- Lymphosarcoma [v. a. Cat]
- Osteosarcoma
- Osteochondrosarcoma
- Multiple myeloma [esp Dog]

## Bone/Muscular Diseases

### Acquired Diseases

- Arthrosis/Degenerative joint disease
  - Hip arthrosis (Coxarthrosis) [esp Dog]
  - Shoulder arthrosis [esp Dog]
  - Other Arthroses [esp Dog]
- Pathological fractures
  - Osteomyelitis
  - Senile osteoporosis
  - Bone tumours
- Cruciate ligament rupture (degenerative)
- Degenerative meniscal damage
- Hygroma [esp Dog]
- Senile osteoporosis
- Arthritis
  - Infectious arthritis
  - Immunoreactive arthritis (rheumatoid arthritis)
- Traumatic fractures
- Hypertrophic pulmonary osteopathy
- Patellar luxation
- Tendovaginitis/bursitis
- Polymyopathy
- Polyneuropathy

## Tumour Diseases

### Bone Tumours

- Osteoma/Osteosarcoma
- Chondroma/Chondrosarcoma
- Osteochondroma
- Fibrosarcoma
- Haemangiosarcoma
- Fibrosarcoma
- Synovial cell sarcoma

## Muscle Tumours

- Rhabdomyoma/  
Rhabdomyosarcoma

## Ocular Diseases

### Acquired Diseases

- Glaucoma
- Lens opacity/cataract
- Progressive retinal atrophy
- Keratoconjunctivitis sicca
- Plasmacellular  
keratoconjunctivitis [Dog]
- Hypertension [esp Cat]
- Senile corneal degeneration
- Senile iridal atrophy
- Conjunctival granuloma  
[Collie]
- Lens luxation
- Uveitis anterior

## Tumour Diseases

### Eyelid Tumours

- Papilloma
- Adenoma/carcinoma of the Meibomian gland
- Squamous cell carcinoma
- Lymphosarcoma [esp Cat]
- Melanoma
- Mast cell tumour [esp Dog]
- Basalioma

### Conjunctival Tumours

- Papilloma
- Squamous cell carcinoma
- Lymphosarcoma [esp Cat]
- Melanoma
- Haemangioma

### Ocular Tumours

- Melanoma
- Papilloma

- Lymphosarcoma [esp Cat]
- Ciliary body adenoma/  
carcinoma
- Haemangioma/  
Haemangiosarcoma
- Retinoblastoma
- Medulloepithelioma
- Optic nerve glioma/  
meningioma

## Orbital Tumours

- Fibrosarcoma
- Lymphosarcoma [esp Cat]
- Osteosarcoma
- Squamous cell carcinoma
- Adenocarcinoma

## Reproductive Tract Diseases

### Acquired Diseases

#### Female Genitalia

- Mastitis
- Pyometra endometritis complex
  - Chronic endometritis
  - Glandular cystic endometrial hyperplasia [Dog]
  - Pyometra
- Ovarian cysts

#### Male Genitalia

- Prostatic enlargement [Dog]
  - Prostatic hyperplasia
  - Prostatic cysts
  - Prostatitis/Prostatic abscess
  - Prostatic tumours
  - Paraprostatic cyst
- Balanoposthitis

## Tumour Diseases

### Female Genitalia

- Ovarian tumours

- Granulosa cell tumour
- Cystadenoma/carcinoma [Dog]
- Uterine tumours
  - Leiomyoma
  - Polyps
  - Adenoma/Adenocarcinoma
  - Fibrosarcoma
- Vaginal/vulval tumours
  - Leiomyoma
  - Fibroma/Fibrosarcoma
  - Papilloma
  - Squamous cell carcinoma
  - Canine transmissible venereal tumour [Dog]
- Mammary tumours
  - Feline fibroadenoma [Cat]
  - Adenoma/Adenocarcinoma
  - Benign/malignant mixed tumours

### **Male Genitalia**

- Testicular tumours [esp Dog]
  - Leydig cell tumour
  - Sertoli cell tumour
  - Seminoma
- Prostatic tumours [Dog]
  - Adenocarcinoma
- Penile tumours [Dog]
  - Canine transmissible venereal tumour
  - Squamous cell carcinoma
  - Papilloma
  - Adenocarcinoma

### **Skin Diseases**

#### **Acquired Diseases**

- Seborrhoea
- Infectious dermatitis
- Allergic dermatitis
- Autoimmune diseases

- Metabolic dermatosis
- Pigment disturbances
- Otitis externa

### **Tumour Diseases**

- Atheroma
  - Epidermoid cyst
  - Sebaceous gland adenoma
  - Sebaceous gland retention cyst
- Basal cell tumour
- Squamous cell carcinoma
- Mast cell tumour
- Histiocytoma [Dog]
- Fibroma/Fibrosarcoma
- Lipoma/Liposarcoma
- Melanoma
- Papilloma
- Cutaneous Lymphosarcoma [esp Cat]
- Hepatoid gland adenoma [esp Dog]
- Sweat gland adenoma
- Trichoepithelioma
- Haemangioma/ Haemangiofibroma/ Haemangiosarcoma
- Intracutaneous keratinised epithelioma
- Anal sac carcinoma
- Dermal leukaemia
- Canine transmissible venereal tumour

### **Immunoreactive Diseases**

#### **Acquired Diseases**

- Viral Immunosuppression
  - FeLV/FIV [Cat]
  - Canine distemper virus [Dog]
  - Parvovirus

- Drug-related immunosuppression
  - Glucocorticoids
  - Cytostatics
- Other Causes
  - Splenectomy
  - Bone marrow damage
  - Tumour disease
  - Diabetes mellitus
  - Hyperoestrogenism
  - Liver cirrhosis
  - Chronic renal failure

### Allergic Diseases

- Atopy/Inhalation allergy
- Food allergy
- Contact allergy
- Flea allergy
- Drug allergy
- Blood transfusion
- incompatibility

- Insect sting/Insect bite allergy

### Autoimmune Diseases

- Lupus erythematosus
  - Systemic lupus erythematosus
  - Discoid lupus erythematosus
- Pemphigus complex
  - Pemphigus vulgaris
  - Pemphigus foliaceus
  - Pemphigus erythematosus
  - Pemphigus vegetans
  - Bullous pemphigoid
- Autoimmune haemolytic anaemia
- Autoimmune thrombocytopenia
- Rheumatoid arthritis
- Polyarteritis nodosa
- Myasthenia gravis

# 16 Zoonoses

---

Dog † Human .....	310
Cat † Human .....	311
Rodents † Human.....	312
Domestic birds † Human.....	312

## Zoonoses

Infectious diseases that are transmissible from animals to humans

### Dog † Human

#### Viruses

- (Rabies virus [bite])

#### Bacteria

- Brucella canis [contact]
- Leptospira sp. [urine]
- Salmonella sp. [contact]
- Campylobacter jejuni [contact]
- Streptococcus sp. Group A [contact]
- Bordetella bronchiseptica [contact]
- Borrelia burgdorferi [ticks]
- Pasteurella multocida [bite]
- Francisella tularensis [ticks]
- Yersinia pestis [fleas, bite]
- Mycobacterium sp. [contact]

### Rickettsia

- (Ehrlichia canis [ticks])

### Fungi

- Microsporum canis [contact]
- Trichophyton mentagrophytes [contact]
- Malassezia pachydermatis [contact]
- Candida albicans [contact]
- Aspergillus fumigatus [contact]

### Ectoparasites

- Fleas
  - Ctenocephalides canis/felis
  - Pulex irritans
  - Others
- Lice
  - Linognathus setosus

- Biting Lice
  - *Trichodectes canis*
- Mites
  - *Sarcoptes* sp.
  - *Cheyletiella* sp.
  - *Neotrombicula autumnalis*
  - *Dermanyssus gallinae*
- *Bordetella bronchiseptica* [contact]
- *Borrelia burgdorferi* [ticks]
- *Pasteurella multocida* [bite]
- *Francisella tularensis* [ticks]
- *Yersinia pestis* [fleas, bite]
- *Mycobacterium* sp. [contact]
- *Afipia felis* [bite/scratch]

## Endoparasites

- Protozoa
  - *Cryptosporidia* sp. [contact]
  - *Giardia duodenalis* [contact]
  - (*Leishmania* sp. [sand flies])
  - (*Entamoeba histolytica* [contact])
- Round worms
  - *Toxocara canis* [contact]
  - *Toxascaris leonina* [contact]
  - *Ancylostoma* sp. [contact]
  - (*Dirofilaria* sp. [mosquitos])
- Tape worms
  - *Dipylidium caninum* [fleas, contact]
  - *Taenia* sp. [contact]
  - *Echinococcus* sp. [contact]

## Cat † Human

### Viruses

- Rabies Virus [Bite]
- Orthopoxvirus *bovis* [contact]

### Bacteria

- *Brucella* sp. [contact]
- *Salmonella* sp. [contact]
- *Campylobacter jejuni* [contact]
- *Listeria monocytogenes* [contact]

- *Bordetella bronchiseptica* [contact]
- *Borrelia burgdorferi* [ticks]
- *Pasteurella multocida* [bite]
- *Francisella tularensis* [ticks]
- *Yersinia pestis* [fleas, bite]
- *Mycobacterium* sp. [contact]
- *Afipia felis* [bite/scratch]

## Rickettsia/Chlamydia

- *Chlamydia psittaci* [contact]
- *Bartonella henselae* [bite/scratch]
- *Coxiella burnetii* [contact]

## Fungi

- *Microsporum canis* [contact]
- *Trichophyton mentagrophytes* [contact]
- *Cryptococcus neoformans* [contact]
- *Pneumocystis carinii* [contact]
- *Sporothrix schenckii* [contact]

## Ectoparasites

- Fleas
  - *Ctenocephalides canis/felis*
  - *Pulex irritans*
  - Others
- Biting lice
  - *Felicola subrostratus*
- Mites
  - *Notoedres cati*
  - *Otodectes cynotis*
  - *Sarcoptes* sp.
  - *Cheyletiella* sp.
  - *Neotrombicula autumnalis*
  - *Dermanyssus gallinae*

## Endoparasites

- Protozoa
  - Toxoplasma sp. [contact]
  - Cryptosporidia sp. [contact]
  - Giardia duodenalis [contact]
- Roundworms
  - Toxocara cati [contact]
  - Toxascaris leonina [contact]
  - Ancylostoma sp. [contact]
- Tapeworms
  - Dipylidium caninum [fleas, contact]
  - (Echinococcus multilocularis) [contact]

## Rodents † Human

### Viruses

- Lymphocytic choriomeningitis [contact]

### Bacteria

- Salmonella sp. [contact]
- Campylobacter jejuni [contact]
- Listeria monocytogenes [contact]
- Bordetella bronchiseptica [contact]
- Leptospira sp. [urine]
- Pasteurella multocida [bite]
- Francisella tularensis [ticks]
- Yersinia sp. [contact]
- Mycobacterium sp. [contact]
- Spirillum minus [rat bite]

### Chlamydia

- Chlamydia psittaci [contact]

## Fungi

- Microsporum canis [contact]
- Trichophyton mentagrophytes [contact]

## Ectoparasites

- Fleas
- Biting lice
- Mites

## Domestic Birds † Human

### Viruses

- Influenza A Virus
- Avian influenza (Paramyxovirus)

### Bacteria

- Salmonella sp. [contact]
- Campylobacter jejuni [contact]
- Pasteurella multocida [bite]
- Mycobacterium sp. [contact]

### Chlamydia

- Chlamydia psittaci [contact]

## Fungi

- Trichophyton mentagrophytes [contact]

## Ectoparasites

- Fleas
- Biting lice
- Mites

## Endoparasites

- Cryptosporidia sp. [contact]

Bile Acid Stimulation Test.....	380

# Haematology

## Red Blood Cell Count

### Haematocrit (Hct)

#### Reference Parameters

Dog: 44–52% (0,44–0,52 l/l)

Cat: 30–45% (0,30–0,45 l/l)

#### ↑ Parameters

- Physiological
  - Greyhounds
  - Training
  - Excitement (splenic contraction)
- Dehydration
- Shock
- Congenital heart disease (Right-left shunt)
- Chronic pulmonary disease
- Hypercortisolism (Cushing's disease) [Dog]
- Hyperthyroidism [Cat]
- Renal tumours
- Altitude sickness
- Polycythaemia vera

#### ↓ Parameters

- Physiological: puppies/kittens, pregnancy, sedation/anaesthesia
- Anaemia

#### Reference Parameters

Dog:  $5,5\text{--}8,5 \times 10^6 \mu\text{l}$  ( $\times 10^{12} \text{l}$ )

Cat:  $5,0\text{--}10,0 \times 10^6 \mu\text{l}$  ( $\times 10^{12} \text{l}$ )

#### ↑ Parameters

- Physiological
  - Greyhounds

- Training
- Excitement (splenic contraction)

- Dehydration
- Shock
- Congenital heart disease (Right-left shunt)
- Chronic pulmonary disease
- Hypercortisolism (Cushing's disease) [Dog]
- Hyperthyroidism [Cat]
- Renal tumours
- Altitude sickness
- Polycythaemia vera

#### ↓ Parameters

- Physiological: puppies/kittens, pregnancy, sedation/anaesthesia
- Anaemia

### Haemoglobin (Hb)

#### Reference Parameters

Dog: 15,0–19,0 g/dl  
 (9,3–11,8 mmol/l)

Cat: 9,0–15,0 g/dl  
 (5,6–9,3 mmol/l)

#### ↑ Parameters

- Physiological
  - Greyhounds
  - Training
  - Excitement (splenic contraction)
- Dehydration
- Shock

- Congenital heart disease (Right-left shunt)
- Chronic pulmonary disease
- Hypercortisolism (Cushing's disease) [Dog]
- Hyperthyroidism [Cat]
- Renal tumours
- Altitude sickness
- Polycythaemia vera

#### ↓ Parameters

- Physiological: puppies/kittens, pregnancy, sedation/anaesthesia
- Anaemia

## Mean Corpuscular Volume (MCV)

### Calculation

$$\text{MCV } (\text{fL}/\mu\text{m}^3) = \frac{\text{Hct } (\%) \times 10}{\text{Erythrocyte number}} \times 10^6 / \mu\text{l}$$

## Reference Parameters

Dog: 67–80 fL/ $\mu\text{m}^3$

Cat: 40–55 fL/ $\mu\text{m}^3$

#### ↑ Parameters

- Physiological
  - Puppies/kittens
- Regenerative anaemia (reticulocytes, normoblasts)
- Folic acid deficiency anaemia
  - Malabsorption syndrome
  - Folic acid antagonism (Sulfonamides/Trimethoprim, Phenytoin)
- Erythroleukaemia
- Hyperthyroidism [Cat]
- Congenital macrocytosis

#### ↓ Parameters

- Haemobartonella felis [Cat]
- Iron deficiency anaemia
- Vitamin B<sub>6</sub> deficiency

## Mean Corpuscular Haemoglobin Concentration (MCHC)

### Calculation

$$\text{MCHC } (\text{g/dL}) = \frac{\text{Hb } (\text{g/dL}) \times 100}{\text{Hct } (\%)}$$

## Reference Parameters

Dog: 32–36 g/dL

Cat: 30–36 g/dL

#### ↑ Parameters

- Measuring error
- Haemolysis
- Lipidaemia
- Heinz bodies [Cat]

#### ↓ Parameters

- Regenerative anaemia (reticulocytes, normoblasts)
- Iron deficiency anaemia
- Vitamin B<sub>6</sub> deficiency anaemia
- Hypoalbuminaemia
- Congenital hypochromic anaemia

## Reticulocyte Number

### Method

Vital stain (Brilliant cresyl blue)

## Reference Parameters

Dog: 5–10/1000 Ery

Cat: 5–20/1000 Ery

#### ↑ Parameters

- Regenerative anaemia
  - Haemolytic anaemia

- Blood loss anaemia
  - Therapeutic success in non-regenerative anaemias
  - Physiological
    - Pregnancy
    - Neonates/puppies/ kittens
  - Chronic pulmonary disease
  - Lead poisoning
  - Congenital diseases
    - Cyclic neutropenia [Grey Collie]
    - Pyruvate kinase deficiency [Basenji, Beagle]
    - Porphyria [Siamese cat]
    - Stomatocytosis [Alaska Malamute]
- ↓ Parameters
- Non-regenerative anaemia
    - Aplastic anaemia/bone marrow insufficiency

## Reticulocyte Index (RI)

### Calculation

$$RI = \frac{\text{Reticulocyte number (\%)} \times \text{Hct (\%)}}{\text{Reticulocyte maturation time (days) } \times \text{normal Hct (\%)}}$$

Reticulocyte maturation time =

with Hct 45%: 1 day

with Hct 25%: 2 days

with Hct 15%: 2,5 days

normal Hct = Dog: 45%

Cat: 40%

### ↑ Parameters

- RI > 2 (regenerative anaemia)
- RI > 3 (haemolytic anaemia)

### ↓ Parameters

- RI < 2 (non-regenerative anaemia)

## Distinguishing Features of Anaemia

Findings	Haemolytic Anaemia insufficiency	Acute Haemorrhage	Chronic Haemorrhage	Bone Marrow
<b>Blood Laboratory</b>				
Haematocrit	↓	↓	↓	↓
Erythrocytes	↓	↓	↓	↓
<b>Findings</b>				
Findings	Haemolytic Anaemia insufficiency	Acute Haemorrhage	Chronic Haemorrhage	Bone Marrow
Haemoglobin (HB)	↓	↓	↓	↓
MCH	—	—	↓	—
MCV	—	—	—/↑	—
MCHC	—	—	↓	—
Protein (TP)	—	↓	↓	—
Bilirubin	↑	—	—	—
Coombs Test	(+)	—	—	—

LDH	↑	—	—	—
Serum iron	↑	—	↓	—
<b>Blood Smear</b>				
Reticulocyte Index	↑ > 2,5	—	↑ > 2,5	↑ > 2,5
Blood parasites	(+)	—	—	—
Autoagglutination	(+)	—	—	—
Spherocytes	+	—	—	—
Macrocytosis	—	—	—	+
Microcytosis	+	—	+	—
Anisocytosis	(+)	—	(+)	—
Heinz bodies	(+)	—	—	(+)
<b>Urinalysis</b>				
Haemoglobin/ Bilirubinuria	+	—	—	—
<b>Bone marrow smear</b>	active	—	active	Low in cell

## White Blood Cell Count

### Leucocyte Number

#### Reference Parameters

Dog: 6000–12000 /µl

Cat: 6000–11000 /µl

#### ↑ Parameters (Leucocytosis)

- Bacterial infectious diseases
- Lymphatic leukaemia/ lymphosarcoma
- Physiological
  - Excitement (stress-leucogram)
  - Pregnancy
- Glucocorticoids
  - Chronic stress
  - Glucocorticoid/ACTH Therapy
  - Hypercortisolism (Cushing's disease) [esp Dog]

- Non-infectious inflammations
- Hyperthyroidism [Cat]
- FIP [Cat]

#### ↓ Parameters (Leucopenia)

- Viral infectious diseases
- Septicaemia/Endotoxaemia
- Anaphylaxis
- Bone marrow insufficiency/ infiltration
- Parasitic infectious diseases
  - Toxoplasma sp.
  - (Leishmania sp.)

### Neutrophil Granulocytes

#### Reference Parameters

Dog: banded: 0–4%

segmented: 50–75%

Cat: banded: 0–4%  
segmented: 60–75%

### ↑ Parameters (Neutrophilia)

- Infectious diseases (esp bacterial)
- Regenerative anaemia
  - Haemolytic anaemia
  - Blood loss anaemia
- Leukaemia
  - Myeloid leukaemia
- Physiological
  - Excitement (stress leucogram)
  - Pregnancy
- Glucocorticoids
  - Chronic stress
  - Glucocorticoid/ACTH Therapy
  - Hypercortisolism (Cushing's disease) [esp Dog]
- Other medicines
  - Anabolics
  - Oestrogen
- Hyperthyroidism [Cat]
- Lupus erythematosus
- Non-infectious inflammation
  - Burns
  - Acute pancreatitis
  - Necrosis
  - Tumours
  - Uraemia
  - Diabetic ketoacidosis

### Left Shift (↑banded)

- Acute infectious diseases (esp bacterial)
- Regenerative anaemias
- Non-infectious inflammation
- Viral infectious diseases (Recovery phase)

### Right Shift

### (Hypersegmentation)

- Glucocorticoids
- Old stale blood sample
- Folic acid deficiency
- ↓ Parameters (Neutropenia)
  - Septicaemia/Endotoxaemia
  - Infectious diseases (esp viral, Toxoplasma sp., Ehrlichia sp.)
  - Anaphylaxis
  - Lupus erythematosus
  - Toxic causes
    - Uraemia
    - Medicines
    - Poisoning
    - Oestrogens (Testicular tumours)
    - Radiation
  - Bone marrow insufficiency
  - Cyclic neutropenia [Grey Collie]

## Eosinophil Granulocytes

### Reference Parameters

Dog: 0–4%

Cat: 0–4%

### ↑ Parameters (Eosinophilia)

- Allergy
  - Atopy/Inhalation allergy
  - Food allergy
  - Contact allergy
  - Hormone allergy
  - Parasitic allergy (Ectoparasites, Larva migrans)
  - Bacterial/fungal allergy
- Eosinophilic granuloma complex
- Eosinophilic pneumonia/feline asthma
- Eosinophilic gastroenteritis

- Hypocortisolism (Addison's disease) [Dog]
- Eosinophilic myositis [Dog]
- Panosteitis [Dog]
- Medicines (esp Methimazole, Carbimazole) [Cat]
- Breed predisposition in the German Shepherd Dog

↓ **Parameters (Eosinopenia)**

- Glucocorticoids
  - Chronic stress
  - Glucocorticoid/ACTH Therapy
  - Hypercortisolism (Cushing's disease) [esp Dog]
- Acute stress (Adrenalin)
- Acute infectious diseases

## Basophil Granulocytes

### Reference Parameters

Dog: 0–1%

Cat: 0–1%

↑ **Parameters (Basophilia)**

- (Dirofilaria immitis [Dog])
- Basophilic leukaemia
- Allergy
- Hyperlipidaemia
- Abscess
- Basenji puppies
- Differentiation: Mast cells

## Lymphocytes

### Reference Parameters

Dog: 13–30%

Cat: 15–30%

↑ **Parameters**

### (Lymphocytosis)

- Physiological
  - Puppies/kittens

- Excitement
- Lymphatic leukaemia
- Chronic inflammation
  - Chronic infectious diseases
  - Chronic allergy
  - Autoimmune diseases
  - Vaccination reactions
- Hypocortisolism (Addison's disease) [Dog]
- Medicines (esp Methimazole, Carbimazole) [Cat]

↓ **Parameters (Lymphopenia)**

- Glucocorticoids
  - Chronic stress
  - Glucocorticoid/ACTH Therapy
  - Hypercortisolism (Cushing's disease) [esp Dog]
- Acute infectious diseases (esp viral)
- Cytostatics
- Septicaemia/Endotoxaemia
- Radiation
- Exposure to the heat/cold
- Primary/secondary immunodeficiency
- Chronic renal failure
- Lymphatic congestion

## Monocytes

### Reference Parameters

Dog: 0–4%

Cat: 0–4%

↑ **Parameters (Monocytosis)**

- Physiological [old dogs]
- Glucocorticoids
  - Chronic stress
  - Glucocorticoid/ACTH therapy

- Hypercortisolism (Cushing's disease) [esp Dog]
- Chronic infectious diseases
- Necrosis
  - Trauma
  - Tumours
  - Haemolysis
  - Haemorrhage
- Acute stress (Adrenalin)
- Monocytic leukaemia
- Autoimmunohaemolytic anaemia
- Relative monocytosis with neutropenia
- Granulomatous diseases

## Further Examination Parameters

### Blood Sedimentation Rate (BSR)

#### Material

0,4 ml Sodium citrate (3,8%) per 2 ml full blood

#### Method

Westergren method (vertical)  
[Dog]

DeHag method (vertical) [Cat]

#### Reference Parameters

Dog: after 1 h: 0–2 mm after  
2 h: 1–4 mm

Cat: after 1 h: 0–2 mm after  
2 h: 2–10 mm

#### ↑ Parameters

- Physiological (Pregnancy)
- Infectious diseases  
(esp pyometra)
- Tumour diseases (esp leukaemia, plasmacytoma)
- Trauma
- Rheumatoid arthritis

#### ↓ Parameters

- Dehydration
- Polycythaemia vera
- Heart failure (hypoxia)

- Chronic lung disease (hypoxia)
- Allergy

### Blood Parasites (Direct Detection)

#### Buffy Coat

- Microfilaria
  - (*Dirofilaria immitis*  
[esp Dog])
  - (*Dirofilaria repens*  
[esp Dog])
  - (*Dipetalonema reconditum*  
[esp Dog])
  - (*Dipetalonema dracunculoides* [esp Dog])
  - (*Dipetalonema grassi* [esp Dog])
  - (*Brugia phahangi* [esp Dog])
  - (*Wuchereria bancrofti*)  
[esp Dog]
- (*Trypanosoma* spp. [esp Dog])

#### Erythrocytes

- *Haemobartonella felis* [Cat]
- *Babesia* spp.
- *Haemobartonella canis* [Dog]
- (*Cytauxzoon felis* [Cat])

## Leucocytes

- (Ehrlichia canis in lymphocytes, monocytes [Dog])

- (Hepatozoon canis in monocytes [Dog])
- (Leishmania donovani infantum very rare in monocytes [esp Dog])

# Blood Chemistry

## Proteins

### Total Protein (TP)

#### Reference Parameters

Dog: 6,0–8,0 g/dl (60–80 g/l)

Cat: 6,0–8,0 g/dl (60–80 g/l)

#### ↑ Parameters

##### (Hyperproteinaemia)

- with ↑ Haematocrit:
  - Dehydration with normal or ↓ Haematocrit:
  - Masked anaemia + dehydration (hyperalbuminaemia)
  - Hyperglobulinaemia
  - Hyperfibrinogenaemia

#### ↓ Parameters

##### (Hypoproteinaemia)

- With ↓ haematocrit
  - overinfusion
  - haemorrhage
- Physiological: puppies/kittens
- ↓ Protein synthesis
  - Cachexia
  - Malabsorption syndrome
  - Liver cirrhosis/ portosystemic shunt
  - Congestive heart failure
- ↑ Protein loss
  - Burns

- Blood loss
- Protein-losing enteropathy
- Protein-losing nephropathy
- Septicemia/endotoxaemia
- Peritonitis

## Albumin

#### Reference Parameters

Dog: 2,5–4,0 g/dl (25–40 g/l)

Cat: 2,5–4,0 g/dl (25–40 g/l)

#### ↑ Parameters

##### (Hyperalbuminaemia)

- Dehydration
- Anabolic agents therapy

#### ↓ Parameters

##### (Hypoalbuminaemia)

- Physiological (puppies)
- ↓ Protein synthesis
  - Cachexia
  - Malabsorption syndrome
  - Liver cirrhosis/ portosystemic shunt
  - Congestive heart failure
- ↑ Protein loss
  - Burns
  - Blood loss
  - Protein-losing enteropathy
  - Protein-losing nephropathy

- Septicaemia/Endotoxaemia
- Peritonitis
- Dwarfism (STH deficiency)  
[Dog]

## Globulin

### Reference Parameters

Dog: 2,4–4,5 mg/dl (24–45 mg/l)  
Cat: 2,8–5,5 mg/dl (28–55 mg/l)

#### ↑ Parameters

##### (Hyperglobulinaemia)

- Physiological (neonates)
- Acute inflammation ( $\alpha$ -Globulins)
- Chronic inflammation ( $\gamma$ -Globulins)
- Liver diseases
  - Acute hepatitis ( $\alpha$ -Globulins)
  - Chronic hepatitis ( $\beta_2$ -Globulins)
  - Liver cirrhosis ( $\gamma$ -Globulins)
  - Liver tumours ( $\beta_1$ -Globulins)
- Tumours
  - esp lymphatic leukaemia/lymphosarcoma
  - Multiple myeloma/plasmacytoma (monoclonal hypergammaglobulinaemia)
- Infectious diseases
  - FIP ( $\gamma$ -Globulins) [Cat]  
Canine Distemper virus ( $\alpha_2$ -,  $\gamma$ -Globulins) [Dog]
  - FeLV/FIV ( $\gamma$ -Globulins) [Cat]
  - Ectoparasites ( $\gamma$ -Globulins)
  - (Leishmania sp.  
[ $\gamma$ -Globulins]) [esp Dog]

- (Ehrlichia sp. [ $\alpha_2$ -,  $\beta$ -,  $\gamma$ -Globulins]) [Dog]
- (Dirofilaria sp. [ $\gamma$ -Globulins]) [esp Dog]
- (Systemic mycoses [ $\gamma$ -Globulins])

- Immunoreactive diseases
  - Lymphocytic cholangitis [Cat]
  - Lupus erythematosus
  - Renal amyloidosis
  - Glomerulonephritis
  - Rheumatoid arthritis

#### ↓ Parameters

##### (Hypoglobulinaemia)

- Primary/secondary immune deficiency
- Blood loss
- Protein-losing enteropathy
- Protein-losing nephropathy

### A/G Ratio

### Reference Parameters

Dog: 0,6–1,1

Cat: 0,6–1,2

#### ↑ Parameters

- Hypoglobulinaemia
- Primary/secondary immune deficiency

#### ↓ Parameters

- Hyperglobulinaemia (< 0,5 FIP suspicion)
- Hypoalbuminaemia

### C-reactive Protein (CRP)

### Reference Parameters

Dog: < 10 µg/ml

#### ↑ Parameters

- Acute inflammatory process

- Bacterial infection
- Autoimmune disease
- Tumour disease
- Encephalitis
- Myocarditis

## Haptoglobin

### Reference Parameters

Dog: 0,3–0,5 mg/dl

### ↑ Parameters

- acute inflammatory process
  - Bacterial infection
  - Autoimmune disease
  - Tumour disease
  - Encephalitis
  - Myocarditis

## Blood Glucose (BG)

### Reference Parameters

Dog: 70–120 mg/dl  
(3,9–6,7 mmol/l)

Cat: 70–150 mg/dl  
(3,9–8,3 mmol/l)

### ↑ Parameters

#### (Hyperglycaemia)

- Physiological
  - Stress [esp Cat]
  - Postprandial
- Diabetes mellitus
- Hypercortisolism (Cushing's disease) [esp Dog]
- Hyperthyroidism [Cat]
- Progesterone (Dioestrus) [Bitch]
- Medicines
  - Glucocorticoids
  - Adrenalin
  - Xylazine
  - Ketamine
  - Alphaxolon/Alphadolon (Saffan®)
  - Thiazides
  - Insulin overdose (Somogyi effect)

- Seizures

- Acromegaly (STH excess)
- Acute Pancreatitis [esp Dog]
- Phaeochromocytoma
- Measuring error (Dextrose DTI, Lipidaemia, Haemolysis)

### ↓ Parameters

#### (Hypoglycaemia)

- Septicaemia/Endotoxaemia
- Hyperinsulinism (Insulinoma, Insulin therapy)
- Liver failure (cirrhosis/portosystemic shunt)
- Malabsorption syndrome
- Cachexia
- Glycogen storage disease
- Hypocortisolism (Addison's disease) [Dog]
- Idiopathic in puppies and small dog breeds
- Seizures (Status epilepticus)
- Polycythaemia
- Ethylene glycol poisoning
- Measuring error (stale blood sample)

## Fructosamine

### Reference Parameters

Dog: up to 340 µmol/l

Cat: up to 340 µmol/l

↑ Parameters (with Hyperglycaemia)

- Longer duration of hyperglycaemia (2–3 weeks) (Diabetes mellitus therapeutic control)

↓ Parameters (with Hyperglycaemia)

- Stress hyperglycaemia [esp Cat]

## Liver Parameters

### Glutamate Pyruvate Transaminase (GPT)/Alanine Aminotransferase (ALT)

### Reference Parameters

Dog: up to 55 U/l

Cat: up to 70 U/l

↑ Parameters

- Hepatitis
  - Infectious hepatitis
  - Leptospira sp. [Dog]
  - FIP Coronavirus [Cat]
  - FeLV/FIV [Cat]
  - CAV-1 (Hepatitis c. c.) [Dog]
  - Toxoplasma sp.
  - Toxic hepatitis
  - Lymphocytic cholangitis [esp Cat]
  - Feline cholangiohepatitis [Cat]
- Hepatoses
  - Congested liver (Right sided heart failure)
  - Feline hepatic lipidosis [Cat]
  - Liver amyloidosis
  - Glycogen storage disease
  - Copper storage disease [Dog]
  - Diabetes mellitus

- Hyperthyroidism [esp Cat]
- Hypercortisolism (Cushing's disease) [esp Dog]

- Liver tumours/Liver cysts
- Bile duct obstruction
  - Intrahepatic cholestasis
  - Extrahepatic cholestasis (stones, tumours)
- Acute pancreatitis [esp Dog]
- Shock
- Fever
- Myocarditis
- Medicines
  - Glucocorticoids
  - Phenobarbital
  - Primidone
  - Mebendazole

### Alkaline Phosphatase (AP)

### Reference Parameters

Adult Dog: up to 110 U/l; Adult Cat: up to 140 U/l; Puppies/kittens: up to 6 times elevated

↑ Parameters

- Physiological (growth, training)
- Liver disease
- Liver regeneration
- Bile duct obstruction
- Bone disease

- Bone regeneration (healing fracture)
- Hypercortisolism (Cushing's disease) [esp Dog]
- Septicaemia/endotoxaemia
- Cachexia
- Pregnancy [esp Cat]
- Hyperthyroidism [Cat]
- Diabetes mellitus
- Medicines
  - Glucocorticoids
  - Phenobarbital
  - Primidone
  - Mebendazole
- Lymphocytic cholangitis [esp Cat]
- Feline cholangiohepatitis [Cat]
- Hepatosis
  - Congested liver (Right sided heart failure)
  - Feline hepatic lipidosis [Cat]
  - Liver amyloidosis
  - Glycogen storage disease
  - Copper storage disease [Dog]
  - Diabetes mellitus
  - Hyperthyroidism [esp Cat]
  - Hypercortisolism (Cushing's disease) [esp Dog]
  - Liver cirrhosis
- Liver tumours/liver cysts
- Bile duct obstruction
  - Intrahepatic cholestasis
  - Extrahepatic cholestasis (stones, tumours)
- Medicines
  - Glucocorticoids
  - Phenobarbital
  - Primidone
  - Mebendazole

## Bilirubin (Total Bilirubin)

### Reference Parameters

Dog: up to 0,2 mg/dl (3,4 µmol/l)

Cat: up to 0,2 mg/dl (3,4 µmol/l)

### ↑ Parameters (Hyperbilirubinaemia)

#### Predominantly indirect (nonconjugated) Bilirubin:

- Acute haemolysis
- Full blood transfusion
- Internal haemorrhage/haematoma

#### Predominantly direct (conjugated) Bilirubin:

- Hepatitis
  - Infectious hepatitis
  - Leptospira sp. [Dog]
  - FIP Coronavirus [Cat]
  - FeLV/FIV [Cat]
  - CAV-1 (Hepatitis c. c.) [Dog]
  - Toxoplasma sp.
  - Toxic hepatitis

- Lymphocytic cholangitis [esp Cat]
- Feline cholangiohepatitis [Cat]
- Hepatosis
  - Congested liver (Right sided heart failure)
  - Feline hepatic lipidosis [Cat]
  - Liver amyloidosis
  - Glycogen storage disease
  - Copper storage disease [Dog]
  - Diabetes mellitus
  - Hyperthyroidism [esp Cat]
  - Hypercortisolism (Cushing's disease) [esp Dog]
  - Liver cirrhosis
- Liver tumours/liver cysts
- Bile duct obstruction
  - Intrahepatic cholestasis
  - Extrahepatic cholestasis (stones, tumours)
- Medicines
  - Glucocorticoids
  - Phenobarbital
  - Primidone
  - Mebendazole

## Ammonium

### Reference Parameters

Dog: up to 100 µg/dl (up to 59 µmol/l); Cat: up to 100 µg/dl (up to 59 µmol/l)

### ↑ Parameters

- Portosystemic shunt
- Liver cirrhosis
- Acute hepatitis
- Extreme uraemia
- Congenital disorders of the urea cycle [Dog]

- Arginine deficiency [Cat]
- Extensive physical strain
- Ammonium poisoning
- Measuring error (stale blood samples)

## Glutamate Oxaloacetate Transaminase (GOT)/Aspartate Aminotransferase (AST)

### Reference Parameters

Dog: up to 25 U/l

Cat: up to 30 U/l

#### ↑ Parameters

- Liver disease
- Skeletal muscle disease
- Myocardial disease (esp myositis, myocardial infarction, aortic thrombosis)
- Extensive physical strain
- Measuring error (haemolysis)

## Gamma Glutamyl Transferase (GGT)

### Reference Parameters

Dog: up to 6 U/l

Cat: up to 6 U/l

#### ↑ Parameters

- Chronic liver disease
- Bile duct obstruction

## Lactate Dehydrogenase (LDH)

### Reference Parameters

Dog: up to 130 U/l

Cat: up to 200 U/l

#### ↑ Parameters

- Physiological (oriental cat breeds)

- Skeletal muscle disease
- Myocardial disease
- Liver disease
- Malignant tumours
- Measuring error (haemolysis)

## Bile Acids

### Reference Parameters

Dog: up to 20 µmol/l  
(12 h fasting value)

Cat: up to 20 µmol/l  
(12 h fasting value)

#### ↑ Parameters

- Physiological (postprandial)
- Hepatitis
  - Infectious hepatitis
  - Leptospira sp. [Dog]
  - FIP Coronavirus [Cat]
  - FeLV/FIV [Cat]
  - CAV-1 (Hepatitis c. c.) [Dog]
  - Toxoplasma sp.
  - Toxic hepatitis
  - Lymphocytic cholangitis [esp Cat]
  - Feline cholangiohepatitis [Cat]
- Bile duct obstruction
  - Intrahepatic cholestasis
  - Extrahepatic cholestasis (stones, tumours)
- Hypercortisolism (Cushing's disease) [esp Dog]
- Glucocorticoid therapy
- Hyperthyroidism [esp Cat]
- Diabetes mellitus
- Portosystemic shunt/liver cirrhosis

## Triglycerides

### Reference Parameters

Dog: 50–100 mg/dl  
(0,6–1,2 mmol/l)

Cat: 50–100 mg/dl  
(0,6–1,2 mmol/l)

#### ↑ Parameters

- Physiological (postprandial)
- Diabetes mellitus
- Hypothyroidism [Dog]
- Acute pancreatitis [esp Dog]
- Hypercortisolism (Cushing's disease) [esp Dog]
- Glucocorticoid therapy
- Bile duct obstruction
- Starvation (with obesity)
- Idiopathic hyperlipidaemia [Miniature Schnauzer]
- Protein-losing nephropathy

## Cholesterol

### Reference Parameters

Dog: 100–300 mg/dl  
(2,5–8,0 mmol/l)

Cat: 75–150 mg/dl  
(2,0–4,0 mmol/l)

#### ↑ Parameters

- Physiological (postprandial)
- Diabetes mellitus
- hypothyroidism [esp Cat]
- Acute pancreatitis [esp Dog]
- Hypercortisolism (Cushing's disease) [esp Dog]
- Glucocorticoid therapy
- Bile duct obstruction
- Starvation (with obesity)
- Idiopathic hyperlipidaemia (Miniature Schnauzer)
- Protein-losing nephropathy

## Cholinesterase

### Reference Parameters

Dog: 1,5–3,0 kU/l

Cat: 1,0–3,0 kU/l

#### ↓ Parameters

- Organophosphate poisoning
- Acute/chronic liver disease

## Beta Hydroxybutyrate(β-HB)

### Reference Parameters

Dog/Cat: laboratory dependent

#### ↑ Parameters

- Diabetic ketoacidosis
- Starvation

## Gastrointestinal Parameters

### Gastrin

### Reference Parameters

Dog: 25–110 ng/l

#### ↑ Parameters

#### (Hypergastrinaemia)

- Gastrinoma (Zollinger-Ellison syndrome) [esp Dog]
- Pyloric stenosis [esp Dog]
- Duodenal ulcer
- Renal failure
- Hyperparathyroidism

- Atrophic gastritis
- Short bowel syndrome (Billroth II) [Dog]

## Folic Acid

### Reference Parameters

Dog: 3,5–11,0 ng/ml  
Cat: 3,2–34,0 ng/ml

#### ↑ Parameters

- Intestinal bacterial overgrowth
- Exocrine pancreatic insufficiency

#### ↓ Parameters

- Malabsorption syndrome
- Folic acid antagonism
  - Sulfonamides/Trimethoprim
  - Phenytoin

## Pancreatic Parameters

### Amylase

### Reference Parameters

Dog: up to 1700 U/l  
Cat: up to 1800 U/l

#### ↑ Parameters (2–3 times)

- Acute pancreatitis [esp Dog]
- Pancreatic necrosis
- Pancreatic tumours
- Renal failure
- Gastric/intestinal perforation
- Glucocorticoid therapy

### Lipase

### Reference Parameters

Dog: up to 300 U/l

## Cobalamin (Vitamin B<sub>12</sub>)

### Reference Parameters

Dog: 300–800 pg/ml  
Cat: 120–1200 pg/ml

#### ↑ Parameters

- Vitamin B<sub>12</sub> supplementation
- Antibiotic therapy

#### ↓ Parameters

- Intestinal bacterial overgrowth
- Intestinal parasites (esp tape worms)
- Malabsorption syndrome
- Exocrine pancreatic insufficiency

Cat: up to 280 U/l

#### ↑ Parameters (2–3 times increased)

- Acute pancreatitis [esp Dog]
- Pancreatic necrosis
- Pancreatic tumours
- Renal failure
- Liver disease (esp Liver tumours)
- Glucocorticoid therapy

## Trypsin-like Immunoreactivity (TLI) Test

### Reference Parameters

Dog: 5–35 µg/l  
Cat: 17–48 µg/l

**↑ Parameters**

- Acute pancreatitis
- Renal failure
- Prerenal azotaemia
- Malnutrition

**↓ Parameters**

- Exocrine pancreatic insufficiency

**Pancreas Specific Lipase (cPL, fPL)****Reference Parameters**

Dog: < 200 µg/l (cPL)

Cat: < 3,5 µg/l (fPL)

**↑ Parameters**

- (Acute) pancreatitis

## Renal Parameters

**Urea****Reference Parameters**

Dog: 20–50 mg/dl  
(3,3–8,3 mmol/l)

Cat: 30–65 mg/dl  
(5,0–11,0 mmol/l)

Urea (mg/dl) =

Urea-N/BUN (mg/dl) × 2,14

**↑ Parameters (Azotaemia)****Prerenal Azotaemia**

- Dehydration
- Shock
- Blood loss
- Congestive heart failure
- Hypocortisolism (Addison's disease) [Dog]
- Hypoalbuminaemia
- Hyperthyroidism [esp Cat]
- Fever
- Diet (Carbohydrate deficiency + Protein excess)
- Extensive physical strain

**Renal Azotaemia**

- Acute renal Failure

- Trauma
- Renal infarction
- Interstitial nephritis
- Toxic nephritis
- Glomerulonephritis
- Pyelonephritis
- Chronic renal failure
  - Interstitial nephritis
  - Glomerulonephritis
  - Pyelonephritis
  - Renal fibrosis
  - Renal amyloidosis
  - Kidney stone (Nephrolithiasis)
  - Renal tumours
  - Renal cysts [esp Cat]

**Postrenal Azotaemia**

- Urinary tract obstruction
  - Urolithiasis
  - FLUTD [Cat]
  - Urinary tract tumours
  - Prostatic enlargement [Dog]
  - Pelvic fracture

- Ruptured bladder /torn ureter/urethra

↓ **Parameters**

- Liver failure (cirrhosis/ portosystemic shunt)
- Polyuria/Polydipsia (esp hypercortisolism, Diabetes insipidus)

## Creatinine

### Reference Parameters

Dog: up to 1,5 mg/dl  
(up to 130 µmol/l)

Cat: up to 2,0 mg/dl  
(up to 170 µmol/l)

↑ **Parameters (Azotaemia)**

#### Prerenal Azotaemia

- Dehydration
- Shock
- Blood loss
- Congestive heart failure
- Hypocortisolism (Addison's disease) [Dog]
- Hypoalbuminaemia
- Hyperthyroidism [esp Cat]
- Fever
- Catabolism
- Diet (Carbohydrate deficiency + Protein excess)
- Extensive physical strain

#### Renal Azotaemia

- Acute renal failure
  - Trauma
  - Renal infarction

- Interstitial nephritis
- Toxic nephritis
- Glomerulonephritis
- Pyelonephritis
- Chronic renal failure
  - Interstitial nephritis
  - Glomerulonephritis
  - Pyelonephritis
  - Renal fibrosis
  - Renal amyloidosis
  - Kidney stones (Nephrolithiasis)
  - Renal tumours
  - Renal cysts [esp Cat]

### Postrenal Azotaemia

- Urinary tract obstruction
  - Urolithiasis
  - FLUTD [Cat]
  - Urinary tract tumours
  - Prostatic enlargement [Dog]
  - Pelvic fracture
- Ruptured bladder/ torn ureter/urethra
- Measuring error (Cephalosporin therapy, diabetic ketoacidosis)

## Cystatin C

### Reference Parameters

Dog: 0,3–1,3 mg/l

Cat: < 1,0 mg/l

↑ **Parameters**

- Early detection parameter of renal failure

## Distinguishing Features of Azotaemia

Findings	Prerenal Causes	Acute Renal Failure	Chronic Renal Failure	Postrenal Causes
<b>Clinical findings</b>				
Fever	(+)	(+)	N	N
Uraemic breath	+	+	+	+
Polydipsia/	N	N	+	N
Polyuria				
Oliguria/Anuria	+	+	(+) final stage	+
Renal size	N	↑	↓	(↑)
Pain on renal palpation	N	+	N	+
Ultrasound	N	Structural change	Structural change	Obstructive causes
Bladder size	N	N	N	Full bladder
Blood pressure	N	N	(≠)	N
Excretion urography	N	↓	↓	N
<b>Blood laboratory</b>				
Urea	↑	↑	↑	↑
Creatinine	↑	↑	↑	↑
Haematocrit	(↑)	N	(↓)	(↑)
Erythrocytes	(↑)	N	(↓)	(↑)
Reticulocytes	N	N	(↓)	N
Potassium	N	↑	↓(↑ final stage)	↑
Phosphorus	N	↑	↑	↑
Blood gas analysis	(metabolic acidosis)	metabolic acidosis	(metabolic acidosis)	metabolic acidosis
<b>Urinalysis</b>				
Specific gravity	> 1,034 [Cat] > 1,029 [Dog]	< 1,034 [Cat] < 1,029 [Dog]	< 1,012 [Cat] < 1,008 [Dog]	irrelevant
Protein	N	+	(+)	irrelevant
Urine sediment	N	active	active	active

## Muscle Parameters

### Creatine Kinase (CK)

#### Reference Parameters

Dog: up to 90 U/l

Cat: up to 130 U/l

#### ↑ Parameters

- Skeletal muscle diseases (Rhabdomyolysis)
  - Muscle trauma
  - Spinal diseases
  - Seizures
  - Myositis
  - Myopathy
  - Extensive physical strain
- Myocardial damage (only CK-MB)

### $\alpha$ -Hydroxybutyrate Dehydrogenase ( $\alpha$ -HBDH)

#### Reference Parameters

Dog: up to 50 U/l

Cat: up to 97 U/l

## Hormones

### Thyroxin (T<sub>4</sub>)

### Free Thyroxin (fT<sub>4</sub>)

#### Reference Parameters

T4: Dog: 1,3–3,6 µg/dl  
(17–46 nmol/l)

Cat: 0,9–4,0 µg/dl  
(12–52 nmol/l)

fT<sub>4</sub>: Dog: 0,6–3,7 ng/dl  
Cat: 0,5–2,6 ng/dl

#### ↑ Parameters

### ↑ Parameters

- Myocardial disease

### Troponin

#### Reference Parameters

Dog: up to 0,6 ng/ml

Cat: up to 0,5 ng/ml

#### ↑ Parameters

- Myocardial disease

### Brain Natriuretic Peptide (BNP)/ Nt-proBNP) [Previously: Atrial Natriuretic Peptide (ANP)]

#### Reference Parameters

Dog: < 900 pmol/l

Cat: < 50 pmol/l

#### ↑ Parameters

- Myocardial disease
- false-positive parameters with renal failure

### Hyperthyroidism

- Thyroid adenoma/carcinoma
- Thyroiditis/abscess
- Physiological (puppies/kittens)
- Hyperoestrogenism
  - Ovarian cysts
  - Ovarian tumours
  - Oestrogen therapy
  - Oestrus [Dog]
- Hyperprogesteronism

- Pregnancy
- Progestagen therapy
- Hyperinsulinism
  - Insulinoma
  - Insulin therapy

↓ **Parameters**

- Primary hypothyroidism
  - Lymphocytic thyroiditis
  - Chronic thyroiditis
  - Follicular atrophy
  - Thyroid carcinoma
  - Iodine deficiency
  - Bilateral thyroidectomy
- Secondary hypothyroidism
  - TSH deficiency  
(Hypophyseal lesion)
  - Autoimmune hypothyroidism
- Congenital hypothyroidism (dwarfism)
- Euthyroid systemic disease
- Medicines
  - Glucocorticoids
  - Anticonvulsants
  - Methimazole/Carbimazole
  - Propylthiouracil
  - Testosterone

## Insulin

### Reference Parameters

Dog: 9–32 mU/l (Fasting value)

Cat: 4–20 mU/l (Fasting value)

↑ **Parameters**  
**(Hyperinsulinism)**

### Hyperinsulinism + Hypoglycaemia

- Physiological (postprandial)
- Insulinoma
  - $\beta$ -Islet cell tumour

- Extrapancreatic tumour  
(paraneoplastic syndrome)

### Hyperinsulinism +

#### Hyperglycaemia

- Diabetes mellitus  
(Type 2: Insulin resistance)
  - Obesity
  - Hypersomatotropism  
(STH)
  - Hyperprogesteronism
  - Hyperthyroidism
  - Glucocorticoid therapy
  - Hypercortisolism  
(Cushing's disease)

↓ **Parameters**  
**(Hypoinsulinism)**

### Hypoinsulinism + Hyperglycaemia

- Diabetes mellitus  
(Insulin deficiency)
- Insulin antagonism
  - esp Adrenalin/  
Noradrenalin
  - Glucocorticoid therapy
  - Hypercortisolism  
(Cushing's disease)
  - Xylazine

## Insulin-Glucose Ratio

### Reference Parameters

Dog: up to 0,3 (Insulin (mU/l):

Glucose (mg/dl))

Cat: up to 0,3

↑ **Parameters**

- Physiological (postprandial)
- Insulinoma
  - $\beta$ -Islet cell tumour
  - Extrapancreatic tumour  
(Paraneoplastic syndrome)

**Beta-Oestradiol ( $17\beta$ -)****Reference Parameters**

Dog: cycle dependent

Cat: cycle dependent

**↑ Parameters****(Hyperoestrogenism)**

- Ovarian cysts
- Ovarian tumours
- Testicular tumours

**Progesterone****Reference Parameters**

Dog: cycle dependent

Cat: cycle dependent

**↑ Parameters ( $> 2 \text{ ng/ml} = 3 \text{ mmol/l}$ )**

- Corpus luteum function (from oestrus for about 60 days)
- LH Peak
  - Ideal mating date about 4 days post LH Peak  
(Progesterone check every 2 days from day 9 of heat)
- Anoestrus
- Luteolysis

**Relaxin****Reference Parameters**Dog/Cat:  $< 20 \%$ **↑ Parameters**

- Pregnancy diagnosis from day 28 in the Dog

**Canine Prostate-Specific Arginine Esterase (CPSE)****Reference Parameters**Dog:  $< 70 \text{ ng/ml}$ **↑ Parameters**

- Early detection of prostatic hyperplasia in the dog

**Erythropoetin****Reference Parameters**

Dog: 0–6 mU/ml (Dog/Cat)

**↑ Parameters**

- Polycythaemia

**↓ Parameters**

- non-regenerative anaemia in renal failure

**Insulin-like Growth Factor (IGF-1)****Reference Parameters**

Dog/Cat: 50–500 ng/ml

**↑ Parameters**

- Acromegaly

**↓ Parameters**

- Dwarfism

**Further Hormones**

- ADH (Vasopressin)
- Parathormone
- Gastrin
- Luteinising hormone (LH)
- Testosterone
- $T_3$ ,  $fT_3$
- ACTH
- Cortisol

## Medications/Toxicology

### Digoxin

#### Therapeutic Plasma Concentration

Dog/Cat: 0,5–2,0 µg/l

##### ↑ Parameters

- Digitalis intoxication
- Renal failure

##### ↓ Parameters

- Subtherapeutic blood level

### Potassium Bromide

#### Therapeutic Plasma Concentration

Dog/Cat: 1000–3000 mg/l

##### ↑ Parameters

- Potassium bromide intoxication

##### ↓ Parameters

- Subtherapeutic blood level

### Phenobarbital

#### Therapeutic Plasma Concentration

Dog: 15–40 mg/l

Cat: 10–30 mg/l

##### ↑ Parameters

- Phenobarbital intoxication

##### ↓ Parameters

- Subtherapeutic blood level

### Cyclosporin

#### Therapeutic Plasma Concentration

Dog: 100–500 ng/ml

Cat: 250–1000 ng/ml

### Further Medicines

- Phenytoin
- Primidon
- Valproic acid
- Benzodiazepines

### Toxicology

- Thallium
- Lead
- Arsenic
- Cadmium
- Chrome
- Cobalt
- Dicoumarols (Rat poisons)
- Mercury
- Nickel
- Organophosphates (see Cholinesterase)
- Methaemoglobin
- Slug pellets/Carbamate

# Electrolytes

## Sodium (Na)

### Reference Parameters

Dog: 140–155 mmol/l

Cat: 145–158 mmol/l

### ↑ Parameters (Hypernatraemia)

- ↑ Water loss
  - Diarrhoea
  - Hyperthermia
  - Fever
  - Panting
  - Diabetes mellitus (insulin therapy)
  - Diabetes insipidus (polyuria)
  - Polyuria without polydipsia (ie pyometra)
  - Hypercortisolism (Cushing's disease)
- ↑ Sodium intake
  - Salty food/water
  - Infusions with hypertonic saline solutions
  - Infusions of sodium bicarbonate solutions
- Primary Hyperaldosteronism

### ↓ Parameters

### (Hyponatraemia)

- ↑ Sodium loss
  - Vomitus/Diarrhoea
  - Chronic renal failure (Polyuria)
  - Acute renal failure (polyuric phase)
  - Hypocortisolism (Addison's disease)
  - Diuretics

- Diluting effect
  - Psychogenic polydipsia
  - Infusions of hypotonic solutions
  - Increased ADH secretion (SIADH)
  - Congestive heart failure (hypertension)
  - Hyperlipidaemia

## Potassium (K)

### Reference Parameters

Dog: 3,5–5,1 mmol/l

Cat: 3,0–4,8 mmol/l

### ↑ Parameters (Hyperkalaemia)

- ↓ Potassium excretion
  - Acute renal failure (Anuria/Oliguria)
  - Urinary tract obstruction (FLUTD, urolithiasis)
  - Bladder rupture
  - Potassium sparing diuretics (spironolactone)
  - ACE inhibitors
  - NSAID
  - Hypocortisolism (Addison's disease)
- ↑ Potassium intake
  - Oral/intravenous potassium substitution
- Potassium shift into extracellular space
  - Metabolic acidosis
  - Diabetic ketoacidosis
  - Muscle trauma

- Hyperosmolarity  
(Hypertonic infusion solution, mannitol, Diabetes mellitus)
- Digitalis intoxication
- Succinylcholine
- Arginine
- Haemolysis (Akita)
- Old stale blood sample  
(Leucocytes, thrombocytes)

#### ↓ Parameters (Hypokalaemia)

- ↑ Potassium excretion
  - Chronic renal failure (polyuria)
  - Postobstructive diuresis
  - Diuretics
  - Infusion of saline solutions
  - Mineralocorticoids
  - Primary hyperaldosteronism
  - Glucocorticoids (Polyuria)
  - Hypercortisolism (Cushing's disease) (Polyuria)
  - Chronic vomitus/  
diarrhoea
- ↓ Potassium intake
  - Potassium poor diet
  - Parenteral nutrition
- Potassium shift into intracellular space
  - Insulin (+ Glucose)
  - Metabolic/respiratory alkalosis
  - Sodium bicarbonate

#### Chloride (Cl)

##### Reference Parameters

Dog: 96–113 mmol/l

Cat: 110–130 mmol/l

#### ↑ Parameters (Hyperchloraemia)

- Metabolic acidosis
  - Diarrhoea
  - Shock
  - Renal failure
  - Diabetic ketoacidosis
  - Lactic acidosis (muscle ache)
  - Ethylene glycol poisoning (anti freeze)
  - Metaldehyde poisoning (slug pellets)
  - Carboanhydrase inhibitor
- Same causes as hypernatraemia

#### ↓ Parameters (Hypochloraemia)

- Metabolic alkalosis
  - Acute vomitus (gastric acid)
- Diuretics
- Same causes as hyponatraemia

#### Calcium (Ca)

##### Reference Parameters

Dog: 2,3–3,0 mmol/l

Cat: 2,3–3,0 mmol/l

#### ↑ Parameters (Hypercalcaemia)

- Malignant tumours
  - Lymphosarcoma
  - Adenocarcinoma
  - Multiple myeloma
- Primary hyperparathyroidism (parathyroid adenoma)
- Osteolysis
  - Bone tumours
  - Osteomyelitis

- Osteoporosis (inactivity osteoporosis)
- Hypocortisolism (Addisonian crisis)
- Seizures (status epilepticus)
- Hypervitaminosis D
  - Calciferol poisoning (Rodenticides)
  - Calcium rich diet/ supplementation
  - Toxic plants (esp jasmine) (*Cestrum* sp.)
- Chronic renal failure
- Hyperalbuminaemia
- Hypothermia

↓ **Parameters**

**(Hypocalcaemia)**

- Eclampsia (peripartal tetany)
- Hypoparathyroidism
  - Autoimmune disease
  - Parathyroidectomy (bilateral thyroidectomy)
  - (Para)thyroid tumour
  - Canine distemper virus
- Secondary parathyroidism
  - Alimentary (calcium deficiency, phosphate excess, malabsorption syndrome)
  - Renal (chronic renal failure)
- Acute renal failure (Hyperphosphataemia)
- Ethylene glycol poisoning (antifreeze)
- Acute pancreatitis
- Hypoalbuminaemia

- Phosphate containing enema [esp Cat]
- Hypercalcitoninaemia (C-cell thyroid adenoma)
- Gastrinoma (Zollinger-Ellison syndrome) [Dog]
- Urinary tract obstruction (hyperphosphataemia)
- Measuring error (EDTA plasma, haemolysis)

## Phosphate (P)

### Reference Parameters

Young dogs < 1 Year: 1,6–3,2 mmol/l

Adult dogs: 0,8–1,6 mmol/l  
Cat: 0,8–1,9 mmol/l

↑ **Parameters**

**(Hyperphosphataemia)**

- Phosphate rich diet
- Renal failure (acute/chronic)
- Urinary tract obstruction (FLUTD, Urolithiasis)
- Ruptured bladder
- Osteolytic bone tumours
  - Mammary carcinoma
  - Prostatic carcinoma
  - Squamous cell carcinoma
  - Fibrosarcoma
  - Lymphosarcoma
  - Multiple myeloma
  - Osteosarcoma
  - Hypervitaminosis D
  - Calciferol poisoning (Rodenticides)
  - Calcium rich diet/ supplementation

- Toxic plants (esp jasmin, Cestrum sp.)
- Hypoparathyroidism
  - Autoimmune disease
  - Parathyroidectomy (bilateral thyroidectomy)
  - Thyroid/parathyroid tumours
  - Canine distemper virus
- Hyperthyroidism [Cat]
- Hypocortisolism (Addison's disease)
- Acromegaly [bitch]
- Measuring error (haemolysis)

↓ Parameters

- (Hypophosphataemia)**
- Antacids (Aluminium hydroxide)
  - Malignant tumours
  - Diabetic ketoacidosis
  - Primary hyper-parathyroidism [Dog]
  - Diuretics
  - Glucocorticoid therapy
  - Hypercortisolism (Cushing's disease) [esp Dog]
  - Hypovitaminosis D/ Rachitis/Osteomalacia
  - Liver cirrhosis
  - Dwarfism (STH deficiency)
  - Respiratory alkalosis (Hyperventilation)

## Magnesium (Mg)

### Reference Parameters

Dog: 0,6–1,3 mmol/l

Cat: 0,6–1,3 mmol/l

↑ Parameters

**(Hypermagnesaemia)**

- Acute renal failure (oliguria/anuria)
- Antacids (magnesium aluminium hydroxide)
- Oral magnesium supplementation
- Hypocortisolism (Addison's disease)

↓ Parameters

**(Hypomagnesaemia)**

- Malabsorption syndrome
- Parenteral nutrition
- Diuretics
- Diarrhoea
- Vomitus
- Pancreatitis
- Hypoparathyroidism
- Medications
  - Cisplatin
  - Aminoglycosides
  - Amphetamins
  - Insulin

## Trace Elements

- Iron
- Zinc
- Copper
- Selenium

# Blood Gas Analysis (BGA)

## Reference Parameters (arterial)

	Dog	Cat
pH	7,36–7,44	7,36–7,44
pCO <sub>2</sub>	4,8–5,3 kPa	3,7–4,3 kPa
pO <sub>2</sub>	11,3–12,7 kPa	11,3–12,7 kPa
Standard bicarbonate:	22–26 mmol/l	22–26 mmol/l
BE (StBicarbonate-24):	+2,5 to -2,5	+2,5 to -2,5
Anion gap Na <sup>+</sup> - (Cl <sup>-</sup> + HCO <sub>3</sub> <sup>-</sup> )	8–12 mmol/l	8–12 mmol/l

## Evaluation

pH	pCO <sub>2</sub>	Standard bicarbonate	BE	Evaluation
↓	↓ (compensation)	↓	↓ (-)	Metabolic acidosis
↓	↑	↑ (renal compensation)	↑ (+) (compensation)	Respiratory acidosis
↑	↑ (compensation)	↑	↑ (+)	Metabolic alkalosis
↑	↓	↓ (compensation)	↓ (-) (compensation)	Respiratory alkalosis

### Metabolic acidosis

#### ↑ Anion Gap (normochloraemic acidosis)

- Diabetic ketoacidosis
- Lactacidosis
  - Heart failure (hypoxia)
  - Respiratory disease (hypoxia)
  - Muscular strain (status epilepticus, dog racing)
  - Liver failure

- Renal failure (uraemia)
- Tumour disease
- Medicines (Acetylsalicylic acid, Paracetamol, Ethylene glycol poisoning, Alcohols)

#### Normal Anion Gap (hyperchloraemic acidosis)

- Diarrhoea
- Renal tubular acidosis
- Hypocortisolism (Addison's disease)

- Medicines (ammonium chloride, calcium chloride, Carboanhydrase inhibitor)
- Parenteral nutrition (Arginine, Lysine, Histidine)

### **Respiratory Acidosis**

- Respiratory obstructive diseases
- Disturbance of the respiratory centre
  - CNS lesion
  - Poisoning (endogenous/exogenous)
  - Hypokalaemia
  - Anaesthesia
- Neuromuscular causes
  - Myasthenia gravis
  - Botulismus
  - Tetanus
  - Hypokalaemia
  - Tick paralysis
  - Phrenic paralysis
  - Poisoning

### **Metabolic Alkalosis**

- Acid loss
  - Chronic vomitus (gastric content)
  - Diuretics
- Potassium deficiency
- Chronic renal failures
- Urinary tract obstruction
- Primary hyperaldosteronism
- Hypercortisolism (Cushing's disease)
- Glucocorticoid therapy
- Alkaline intake
  - Sodium bicarbonate

### **Respiratory Alkalosis**

- Central nervous excitement (Hyperventilation in case of fear, pain)
- Hypoxia
  - Pulmonary disease
  - Congestive heart failure
  - Anaemia
- Disturbance of the respiratory centre
  - CNS lesion
  - Septicaemia/endotoxaemia
  - Hepatic encephalopathy (Liver cirrhosis, portosystemic shunt)
  - Heat stroke
  - Anaesthesia (respiration)
  - Medicines (acetylsalicylic acid, aminophyllines)

## **Serum Electrophoresis**

### **Reference Parameters**

	Dog	Cat
Albumin (g/dl)	2,2–4,4 (47–59%)	2,6–5,6 (45–60%)
$\alpha_1$ -Globulin (g/dl)	0,2–0,5 (4–7%)	0,2–1,3 (4–14%)
$\alpha_2$ -Globulin (g/dl)	0,3–0,9 (5–12%)	0,4–1,1 (7–12%)
$\beta_1$ -Globulin (g/dl)	0,5–1,4 (11–20%)	1,1–1,4 (11–15%)
$\gamma$ -Globulin (g/dl)	0,4–1,4 (8–18%)	0,6–2,6 (10–28%)

**↑ α<sub>1</sub>-Globulin**

- Physiological: Neonates
- Acute/chronic inflammation
- Tumour disease
- Rheumatoid arthritis

**↓ α<sub>1</sub>-Globulin**

- Liver cirrhosis

**↑ α<sub>2</sub>-Globulin**

- Chronic inflammation

- Systemic mycosis

- Tumour disease

**↓ α<sub>2</sub>-Globulin**

- Liver cirrhosis

- Chronic inflammation

- Systemic mycosis

- Protein-losing nephropathy

- Haemolytic anaemia

- Canine distemper [Dog]

- FIP [Cat]

- Rheumatoid arthritis

**↑ β<sub>1</sub>-Globulin**

- Protein-losing nephropathy

**↓ β<sub>1</sub>-Globulin**

- Autoimmune disease

- Haemolytic anaemia

**↑ β<sub>2</sub>-Globulin**

- Acute inflammation

- Protein-losing enteropathy

- Systemic mycosis

- Liver cirrhosis

- Tumour disease

- FIP [Cat]

**↑ γ-Globulin****Monoclonal****Gammaglobulinaemia**

- Multiple myeloma/ plasmacytoma [esp Dog]
- Lymphatic leukaemia/ Lymphosarcoma
- (Ehrlichia sp. [Dog])

**Polyclonal****Gammaglobulinaemia**

- Infectious diseases
  - FIP [Cat]
  - CAV-1 (Hepatitis c. c.) [Dog]
  - Brucella sp. [Dog]
  - Ectoparasitosis
  - (Leishmania sp. [esp Dog])
  - (Ehrlichia sp. [Dog])
  - (Rickettsia sp. [Dog])
  - (Dirofilaria sp. [esp Dog])
- Chronic inflammation
  - Pyometra
  - Feline Cholangiohepatitis [Cat]
  - Pyoderma
- Autoimmune disease
  - Systemic lupus erythematosus
  - Pemphigus complex
  - Rheumatoid arthritis
  - Autoimmune haemolytic anaemia
- Tumour diseases
- ↓ **γ-Globulin**
  - Primary/secondary immune deficiency
  - Neonates (colostrum deficiency)
  - Immunosuppression

# Immunoserology

## ANA Test (Antinuclear Antibodies)

### Reference Parameters

Dog/Cat: negative

#### Positive

- Systemic lupus erythematosus
- Discoid lupus erythematosus
- Pemphigus complex
- Infectious disease
  - Demodex sp.
  - FeLV/FIV [Cat]
  - FIP [Cat]
- Flea allergy
- Immune haemolytic anaemia
- Immune thrombocytopenia
- Rheumatoid arthritis
- Bacterial endocarditis
- Feline cholangiohepatitis [Cat]
- Lymphocytic thyroiditis
- Tumour disease
- False positive
  - Griseofulvin
  - Hydralazine
  - Procainamide
  - Sulfonamide
  - Tetracyclines
  - Propylthiouracil
  - Methimazole/Carbimazole

#### False Negative

- Glucocorticoids
- Cytostatics

## Coombs Test (Direct)

### Reference Parameters

Dog/Cat: negative  
(no agglutination)

## Positive (Erythrocyte Agglutination)

- Immune haemolytic anaemia
- Blood parasites

## Rheumatoid Factor (Rose-Waaler Test)

### Reference Parameters

Dog/Cat: negative

#### Positive

- Rheumatoid arthritis
- Systemic lupus erythematosus

## Blood Types

### Dog

- DEA 1,1
- DEA 1,2
- DEA 3
- DEA 4
- DEA 5
- DEA 6
- DEA 7
- DEA 8 Incompatibility reactions with DEA-1,1-positive donors and DEA-1,1-negative recipients

### Cat

- Blood type A (96% of all cats)
  - Blood type B (esp British Shorthair, Devon Rex)
  - Blood type AB
- Incompatibility reactions with Blood type A donors and blood type B recipients

Neonatal isoerythrolysis in kittens of blood type A fathers and blood type B mothers

### Acetylcholine Receptor Antibody Test

#### Reference Parameters

Dog/Cat: negative

#### Positive

- Myasthenia gravis

### Microscope Slide Agglutination Test

#### Test Proceedings

1. Centrifugation of an EDTA blood sample
2. Pipette the plasma off, add same amount of saline and mix
3. Repeat this 3 × times
4. Produce a microscope slide preparation with a cover slide

#### Positive (Erythrocyte Agglutination)

- Immune haemolytic anaemia

## Microbial Serology

Microbe	Species	Test	Material
<b>Viruses</b>			
Adenovirus I + II	Dog	Antibody Antigen (PCR)	Serum/Plasma EDTA blood, smear

### Thyroglobulin Antibody Test

#### Reference Parameters

Dog/Cat: negative

#### Positive

- Autoimmune hypothyroidism

### (Anti-)Thrombocyte Antibody Test

#### Reference Parameters

Dog/Cat: negative

#### Positive

- Autoimmune thrombocytopenia
- Secondary after Ehrlichiosis/ Anaplasmosis

### Insulin Antibodies

#### Reference Parameters

Dog/Cat: negative

#### Positive

- Insulin resistance with Diabetes mellitus

### Further Immunological Tests

- Allergy test (monoclonal antibody test)
- Immune electrophoresis

Canine Parainfluenza Dog virus (CPIV)	Dog	Antibody Antigen (PCR)	Serum/Plasma Smear
Coronavirus (CCoV, Dog/Cat FECV, FIPV)	Cat	Antibody Antigen (PCR)	Serum/Plasma Faeces/Smear/Effusion
Feline Calici virus (FCV)	Cat	Antibody Antigen (PCR)	Serum/Plasma Smear/ EDTA blood
FeLV	Cat	Antigen (ELISA)	Serum/Plasma
		Antigen (PCR)	EDTA blood, Saliva
FIV	Cat	Antigen (ELISA)	Serum/Plasma
		Antigen (PCR)	EDTA blood
FSME	Dog	Antibody Antigen (PCR)	Serum/Plasma
Herpes virus (CHV, FHV)	Dog/Cat	Antibody Antigen (PCR)	Serum/Plasma
Influenza A	Dog/Cat	Antigen (PCR)	EDTA blood, Smear

### Viruses

Feline cow pox (Orthopoxvirus)	Cat	Antigen (PCR)	Biopsy/Skin scrape
Papilloma virus	Dog	Antigen (PCR)	Biopsy/Skin scrape
Parvovirus (CPV, FPV)	Dog/Cat	Antibody Antigen (PCR)	Serum
Rotavirus	Cat	Antigen	EDTA blood/Faeces
Distemper virus	Dog	Antibody Antigen (PCR)	Faeces Serum/Plasma
			Liquor/Smear

### Bacteria

Anaplasma spp.	Dog/Cat	Antibody Antigen(PCR)	Serum/Plasma EDTA blood,Tick
Bartonella sp.	Cat	Antigen (PCR)	Serum/Plasma
Bordetella sp.	Dog/Cat	Antigen (PCR)	EDTA blood, Smear
Borrelia spp.	Dog	Antibody Antigen (PCR)	Smear
Brucella sp.	Dog	Antibody Antigen (PCR)	Serum/Plasma
Campylobacter sp.	Dog/Cat	Antibody Antigen (PCR)	Synovia/Liquor, Skin biopsy, Tick
Chlamydia/ Chlamydophila spp.	esp Cat/ Dog	Antibody Antigen (PCR)	Serum/Plasma
			Faeces
			Serum/Plasma

Coxiella spp.	Dog/Cat	Antibody Antigen (PCR)	Conjunctival Smear Serum/Plasma
Ehrlichia spp.	Dog/Cat	Antibody Antigen (PCR)	Serum/Plasma EDT
<b>Bacteria</b>			
Helicobacter spp.	Dog/Cat	Antibody Antigen	Serum/Plasma Faeces, Smear, Vomit
Leptospira spp.	Dog	Antibody Antigen (PCR)	Serum/Plasma Smear, Urine
MRSA	Dog/Cat	Antigen (PCR)	Faeces/Smear
Mycoplasma spp.	Dog/Cat	Antigen (PCR)	EDTA blood
Rickettsia spp.	Dog	Antibody	Serum/Plasma
Salmonella spp.	Dog	Antibody Antigen (PCR)	Serum/Plasma Faeces
Staphylococcus spp.	Dog/Cat	Antibody	Serum
Yersinia spp.	Dog/Cat	Antibody Antigen (PCR)	Serum Faeces
<b>Parasites</b>			
Babesia spp.	Dog/Cat	Antibody Antigen (PCR)	Serum/Plasma
Cryptosporidia spp.	Dog/Cat	Antigen (PCR)	EDTA blood, Tick
Dirofilaria sp. (adult)	Dog/Cat	Antigen (ELISA)	Faeces Serum/Plasma
Hepatozoon sp.	Dog	Antigen (PCR)	EDTA blood, Smear, Tick
Leishmania sp.	Dog	Antibody Antigen (PCR)	Serum Biopsy
Neospora sp.	Dog	Antibody Antigen (PCR)	Serum/Plasma Liquor/Faeces
Sarcoptes sp.	Dog	Antibody	Serum
Toxoplasma sp.	Dog/Cat	Antibody Antigen (PCR)	Serum Liquor/Faeces
Tritrichomonas sp.	Cat	Antigen (PCR)	Faeces
<b>Fungi</b>			
Aspergillus sp.	Dog/Cat	Antibody	Serum/Plasma
Microsporum sp./ Trichophyton sp.	Dog/Cat	Antigen (PCR)	Hair/Skin Smear

# Moleculargenetic Examinations

<b>Detection</b>	<b>Species/Breed</b>
Pedigree Certification	Dog/Cat (oral mucosal smear)
Alaskan Malamute Polyneuropathy	Alaskan Malamute
Arrhythmogenic right ventricular Cardiomyopathy (ARVC)	Boxer
Brachyuria	Australian Shepherd et al
Canine Leucocyte Adhesion Deficiency (CLAD)	Irish Setter
Collie Eye Anomalie (CEA)	Collie, Australian Shepherd et al
Congenital Hypothyroidism (CGH)	Spanish Water Dog
Cystinuria	Newfoundland, Landseer
Degenerative Myelopathy (DM)	German Shepherd Dog et al
Dry Eye Curly Coat Syndrome	Cavalier King Charles Spaniel
Episodic Falling (EF)	Cavalier King Charles Spaniel
Hereditary Necrotising Myelopathy (ENM)	Dutch Kooikerhondje
Exercise Induced Collapse (EIC)	Labrador, Retriever, German Wirehaired, Pembroke Welsh Corgie et al
Factor VII Deficiency	Alaskan Klee Kai, Airedale Terrier, Beagle, Giant Schnauzer, Scottish Deerhound
Familial Nephropathy	English Cocker Spaniel, English Springer Spaniel, Samoyed
Coat colour/colour variations/Hair length	Dog/Cat
Fucosidosis	English Springer Spaniel
Brittle Bone Disease (Osteogenesis imperfecta)	Short and Wire Haired Dachshund
Gangliosiderosis (GM1, GM2)	Husky, Portugese Water Dog, Siamese Cat, Burma, Korat, Oriental Shorthair West Highland White Terrier, Cairn Terrier
Globoid cell leucodystrophy (Krabbe disease)	Finnish Lapphund, Swedish Lapphund, Lapp Reindeer Dog, Curly Coated Retriever, Norwegian Forest Cat
Glycogen Storage Disease (GSDII, GSDIIIa)	

Gray Collie Syndrome (Canine Cyclic Neutropenia)	Collie
Haemophilia A (Factor VIII)	Havanese
Haemophilia B (Factor IX)	Rhodesian Ridgeback
Hereditary cataract (HSF4)	Australian Shepherd, Wäller
Hereditary Nasal Parakeratosis (HNPK)	Labrador Retriever
Hereditary Neuropathy	Greyhound
Hypertrophic Cardiomyopathy	Maine Coon, Ragdoll
Hyperuricosuria and Hyperuricaemia (SLC)	Dog
Proof of Identity	Dog/Cat
Inmerslund-Gräsbeck Syndrome (IGS)	Beagle, Border Collie
Junctional Epidermolysis Bullosa (JEB)	German Short Hair
Juvenile Epilepsy	Lagotto Romagnolo
Juvenile Dilative Cardiomyopathy (JDCM)	Portuguese Water Dog
Copper Storage Disease	Bedlington Terrier
L2-Hydroxyglutaricaciduria (L2-HGA)	Staffordshire Terrier
Late onset Ataxia (LOA)	Parson Jack Russell Terrier
Malignant Hyperthermia	Dog
MDR1 Genetic defect (Ivermectin oversensitivity)	Australian Shepherd, Bobtail, Border Collie, German Shepherd Dog, Elo, Short and Long Haired Collie, Long Haired Whippet, McNab, Shetland Sheepdog, Silken Windhound, Wäller, White Swiss Shepherd Dog
Mucopolysaccharidosis VII	German Shepherd Dog, Brasilian Terrier
Muscular dystrophy (MD)	Cavalier King Charles Spaniel, Golden Retriever
Musladin-Lueke Syndrome (MLS) Mutation	Beagle Myostatin
Myotonia congenita	Whippet
Night blindness (CSNB)	Miniature Schnauzer
Narcolepsy	Briard
Necrotising Meningoencephalitis (NME)	Dobermann, Labrador Retriever
Neonatal Cortical Cerebellar Abiotrophy (NCCD)	Pug
	Beagle

<b>Detection</b>	<b>Species/Breed</b>
Neonatal Encephalopathy With Seizures (NEWS)	Standard Poodle
Neuronal Ceroid Lipofuscinosis (NCL)	American Staffordshire Terrier, American Bulldog, Australian Shepherd, Border Collie, Dachshund, English Setter, Tibetan Terrier
Phosphofructokinase deficiency	American Cocker Spaniel, German Spaniel, English Springer Spaniel, Whippet
<b>Proof</b>	<b>Species</b>
Polycystic Kidney Disease (PKD)	Bull Terrier, Persian, Siamese, Himalayan, European Shorthair, British Shorthair, American Shorthair et al
Primary Ciliary Dyskinesia (PCD)	Bobtail
Primary Lens luxation (PLL)	Dogs
Primary Open Angle Glaucoma (POAG)	Beagle
Progressive Retinal Atrophy (PRA)	Irish Setter, Collie, Welsh Corgi, Bullmastiff, Sloughi, Somali, Abessinier et al
Protein-Losing Nephropathy (PLN)	Soft-Coated Wheaten Terrier
Pyruvate Dehydrogenase Phosphatase-1 Deficiency (PDP1)	Clumber and Sussex Spaniel
Pyruvatekinase Deficiency	Basenji, Caim Terrier, West Highland White Terrier, Somali, Abyssinian
Retinal Dysplasia/Oculoskeletal Dysplasia (OSD)	Labrador Retriever, Samoyed
Spinal Muscular Atrophy (SMA)	Maine Coon
Startle Disease	Irish Wolfhound
Neutrophilic Syndrome (TNS)	Border Collie
Von Willebrand Disease (vWD1, vWD2, vWD3)	Bernese Mountain Dog, German Pinscher, Dobermann, German Wired Hair, German Short Hair, Dutch Kooiker, Scottish Terrier, Shetland Sheepdog et al

Proof	Species
X-Severe Combined Immunodeficiency (X-SCID)	Basset Hound, Welsh Corgie
Dwarfism	German Shepherd Dog, Saarloos Wolfhound, Czechoslovakian Wolfhound, Labrador Retriever

Examination material: EDTA blood/Oral mucosal smear

## Coagulation

### Thrombocyte Number

#### Reference Parameters

Dog:  $150\text{--}500 \times 10^9/\text{l}$

Cat:  $180\text{--}550 \times 10^9/\text{l}$

#### ↑ Parameters

##### (Thrombocytosis)

- Physiological
  - Excitement
  - Physical strain
  - Pregnancy
- Acute/chronic haemorrhage
- Acute/chronic inflammation
- Tumour disease
- Splenectomy
- Medicines
  - Vincristine
  - Adrenalin
  - Glucocorticoids

#### ↓ Parameters

##### (Thrombocytopenia)

##### ↓ Production (Bone marrow damage)

- Infectious causes
  - FeLV/FIV [Cat]
  - FIP Coronavirus [Cat]
  - Parvovirus
  - (Ehrlichia sp. [Dog])

- Toxic Causes
  - Phenylbutazone
  - Metamizole/Carbimazole
  - Chloramphenicol
  - Phenobarbital
  - Sulfonamides
  - Tetracyclines
  - Cytostatics
  - Radiation
  - Heavy metal poisoning
  - Oestrogen (endogenous/exogenous)
  - Levamisol
  - Acetylsalicylic acid
  - Paracetamol
  - Penicillin
  - Streptomycin
  - Diuretics
  - Acetazolamide
  - Propylthiouracil
  - Gold preparations
  - Uraemia
  - Endotoxins/Mycotoxins
- Immunoreactive Causes
  - Infection
  - Medicines
  - Autoimmune disease
- Bone marrow tumours
  - Multiple myeloma

- Lymphatic leukaemia
  - Myeloid leukaemia
  - Other Causes
    - Myelofibrosis/Osteofibrosis
    - Radiation
    - Iron deficiency anaemia
    - Hypocortisolism (Addison's disease)
- ↑ **Consumption**
- DIC
    - Septicaemia/endotoxaemia
    - Gastric dilation/volvulus
    - Pyometra
    - Urinary tract infection
    - Haemorrhagic enteritis
    - Splenic torsion
    - Acute pancreatitis
    - Shock
    - Heart failure
    - Liver failure
    - Haemolysis
    - Snake venom
    - Heat stroke
    - Electric accident
    - Burns
    - FIP [Cat]
    - Tumour diseases
    - (Dirofilaria sp. [Dog])
  - Immunoreactive Causes
    - Infection
    - Medicines
    - Autoimmune thrombocytopenia
    - Systemic lupus erythematosus
  - Infectious Causes
    - FeLV/FIV [Cat]
    - FIP Coronavirus [Cat]
    - Parvovirus
    - Canine distemper virus [Dog]

- CAV-1 (Hepatitis c.c.) [Dog]
- Canine Herpes virus [Dog]
- Leptospira sp. [Dog]
- Salmonella sp.
- Haemobartonella sp. [Cat]
- Babesia sp. [Dog]
- (Histoplasma sp.)
- (Ehrlichia sp. [Dog])
- Splenomegaly
- Chronic haemorrhage
- Feline aortic thrombosis [Cat]

## Prothrombin Time (PT)

### Indication

Measure for the **exogenous (extrinsic) system** + final common pathway of coagulation

### Reference Parameters

Dog: 7–10 s

Cat: 7–12 s

- Vitamin-K deficiency/ Antagonism
  - Liver failure
  - Malabsorption syndrome
  - Feline Cholangiohepatitis [Cat]
  - Obstructive jaundice
  - Damage to the intestinal flora (Antibiosis)
  - Dicoumarol poisoning (Rodenticides)
- Liver failure

- Factor VII deficiency [esp Beagle]
- Factor X deficiency [esp Cocker]
- DIC
- Systemic lupus erythematosus

## Thromboplastin Time (Quick)

### Indication

Measure for the **exogenous (extrinsic) system** + final common pathway of coagulation

### Reference Parameters

Dog: 75–130%

Cat: 60–150%

### ↓ Parameters (Prolonged Thromboplastin Time)

- Vitamin K deficiency/antagonism
  - Liver failure
  - Malabsorption syndrome
  - Feline cholangiohepatitis [Cat]
  - Obstructive jaundice
  - Damage to the intestinal flora (Antibiosis)
  - Dicoumarol poisoning (Rodenticides)
- Liver failure
- Factor VII deficiency [esp Beagle]
- Factor X deficiency [esp Cocker]
- DIC
- Systemic lupus erythematosus

## (Activated) Partial Thromboplastin Time (PTT/aPTT)

### Indication

Measure for the **endogenous (intrinsic) system** + final common pathway of coagulation

### Reference Parameters

Dog: < 24 s; Cat: < 22 s

### ↑ Parameters (Prolonged PTT/aPTT) with Normal PT/Quick

- Haemophilia A (Factor VIII deficiency) ( $\delta$ Dog/Cat)
- Haemophilia B (Factor IX deficiency) ( $\delta$  Dog/Cat)
- Factor XI deficiency (Dog)
- Factor XII deficiency (Hagemann) (Cat)
- Heparin therapy

### ↑ PT/↓ Quick

- Factor deficiency II, V, X
- Fibrinogen deficiency
- Vitamin K deficiency/antagonism
- Fibrinolysis therapy
- Heparin therapy
- DIC
- Hyperfibrinolysis

## Fibrin Degradation Products (FDP)

### Indication

DIC/Suspicion of hyperfibrinolysis

## Reference Parameters

Laboratory dependent

### ↑ Parameters

- DIC
  - Septicaemia/endotoxaemia
  - Gastric dilation/volvulus
  - Pyometra
  - Urinary tract obstruction
  - Haemorrhagic enteritis
  - Splenic torsion
  - Acute pancreatitis
  - Shock
  - Heart failure
  - Liver failure
  - Haemolysis
  - Snake venom
  - Heat stroke
  - Electric accident
  - Burns
  - FIP [Cat]
  - Tumour disease
  - (Dirofilaria sp. [Dog])
- Thromboembolism
  - Feline aortic thromboembolism [Cat]
  - Pulmonary thromboembolism
  - Therapeutic success in non-regenerative anaemia
- Hyperfibrinolysis
- Fibrinolysis therapy

## Bleeding Time

### Indication

Global coagulation test

### Test Procedure

Measurement of the bleeding time after ear laceration or claw clipping (filter paper)

## Reference Parameters

Dog: < 6 min Cat: < 3 min

### ↑ Parameters (Prolonged Bleeding Time)

- Thrombocytopenia
- Thrombocytopathy
- Vitamin K deficiency/ Antagonism
- DIC
- Von Willebrand syndrome

## Factor Determination

- Von Willebrand factor
- Factor VIII
- Factor IX

## Assessment of Coagulation Tests

Disease	Bleeding Time	PT/Quick	PTT/aPTT	Fibrin Degradation Products	Thrombocytes
Vit. K deficiency/ Dicoumarol poisoning	N	↑	N/↑	N	N
DIC	↑	N/↑	N/↑	↑	↓
Thrombocytopenia	↑	N	N	N	↓
Thrombocytopathy	↑	N	N	N	N
Von Willebrand syndrome	↑	N	N/↑	N	N
Haemophilia A (Factor VIII deficiency)	N	N	↑	N	N
Haemophilia B (Factor IX deficiency)	N	N	↑	N	N
Factor XI deficiency	N	N	↑	N	N
Factor XII deficiency	N	N	↑	N	N
Factor VII deficiency	N	↑	N	N	N
Factor X deficiency	N	↑	↑	N	N

# Urinalysis

## Urinary Output/Volume

### Reference Parameters

Dog: 1–2 ml/kg KG/h

(20–40 ml/kg KG/d)

Cat: 1–2 ml/kg KG/h

(20–30 ml/kg KG/d)

#### ↑ Parameters (Polyuria)

- See principal symptom:  
Polydipsia/Polyuria

#### ↓ Parameters (Oliguria/ Anuria)

- See principal symptom:  
Oliguria/Anuria

## Specific Gravity

### Reference Parameters

Dog: >1,015

Cat: >1,015

#### ↑ Parameters

#### (Hypersthenuria)

- Dehydration
- Blood loss
- Shock
- Congestive heart failure
- Fever
- Renal infarction
- Proteinuria
- Glucosuria
- Medicines
  - Dextrans
- Oliguria (sometimes in acute renal failure)

#### ↓ Parameters

#### (Hyposthenuria) Polyuria

- Medicines
  - Glucocorticoids

- Anticonvulsants
- Diuretics
- Continuous intravenous drip infusion
- Hypercortisolism (Cushing's disease) [esp Dog]
- Diabetes mellitus
- Hyperthyroidism [Cat]
- Hypokalaemia [esp Cat]
- Chronic renal failure

## Urine Colour

### Reference Parameters

Dog/Cat: pale to intense yellow

### Light/Colourless

- Polyuria

### Yellow-Orange

- Urine concentration
- Bilirubin
- Medicines
  - Nitrofurantoin
  - Sulfasalazine
  - Riboflavin
  - Fluorescein

### Red

- Haematuria
- Haemoglobinuria
- Myoglobinuria
- Porphyria [Cat]
- Beetroot
- Medicines
  - Phenytoin
  - Bromsulphthalein (BSP)
  - Chronic lead poisoning
  - Chronic mercury poisoning
- Stale urine sample

**Green–Brown**

- Bilirubin/Biliverdin
- Myoglobin
- Pseudomonas infection
- Phenols

**Blue**

- Methylene blue

**Milky**

- Pyuria (pus)
- Lipiduria

**Urine Chemistry****Reference Parameters**

Dog/Cat:

pH: 5,5–7,0

Total Protein: 60–530 mg/l

Creatinine: &lt; 1,06 g/l

Protein-Creatinine

Ratio: &lt; 0,5

Glucose: negative

Ketones: negative

Bilirubin: Dog: up to

(+)

Cat: negative

Haemoglobin: negative

Myoglobin: negative

**↑ pH Alkaline**

- Stale urine sample
- Postprandial
- Bacterial cystitis
- Diet (protein poor)
- Respiratory alkalosis (Hyperventilation)
- Vomitus (Stomach contents esp with pyloric stenosis)
- Urinary tract obstruction
- Medicines
  - Sodium bicarbonate
  - Lactate
  - Acetazolamide

**↓ pH acid**

- Diabetic ketoacidosis
- Azotaemia
- Diarrhoea
- Vomitus (small intestinal content/bile)
- Respiratory acidosis
- Hypoxia
  - Obstructive respiratory tract disease
  - Cardiac disease (esp right-left shunt)
- Shock
- Protein degradation
  - Protein rich diet
  - Cachexia
- Medicines
  - Methionin
  - Ammonium chloride
  - Vitamin C
  - Furosemide
  - NaCl
  - Acidifying dietary food (stone prophylaxis)

**↑ Protein (Proteinuria)**

- Physiological (oestrus)
- Urinary tract infection/tumours/ Urolithiasis
- Infection of the reproductive organs/tumours (esp pyometra, prostatitis, ejaculation)
- Haematuria
- Haemoglobinuria
- Myoglobinuria
- Hyperproteinaemia
- Acute/chronic renal failure

**↑ Protein/Creatinine Ratio**

- Glomerulonephritis
- Amyloidosis

- Bense-Jones Proteinuria
- ↑ **Glucose (Glucosuria)**
- With ↑ Blood glucose (Hyperglycaemia)**
- Physiological
  - Stress [esp Cat]
  - Postprandial
- Diabetes mellitus
- Hypercortisolism (Cushing's disease) [esp Dog]
- Hyperthyroidism [Cat]
- Progesterone (Dioestrus, bitch)
- Medicines
  - Glucocorticoids
  - Progestagen therapy
  - Adrenalin
  - Xylazine
  - Ketamine
  - Alphaxolon/Alphadolon (Saffan®)
  - Thiazides
  - Insulin overdose (Somogyi effect)
- Acromegaly (STH excess)
- Acute pancreatitis [esp Dog]
- Phaeochromocytoma

#### **With Normal Blood Glucose**

- Fanconi syndrome (primary renal glucosuria)
- Acute/chronic renal failure

#### ↑ **Ketones (Ketonuria)**

- Diabetic ketoacidosis
- Hypoglycaemia (Insulinoma)
- Trauma (Lipolysis)
- Fasting esp with obesity (lipolysis)
- Diet food (fat rich + poor in carbohydrates)

#### ↑ **Bilirubin (Bilirubinuria)**

- Haemolysis

- Intravasal (haemolytic anaemia)
- Extravasal (haematuria)

- Hepatitis
- Hepatosis
- Liver tumours/cysts
- Bile duct obstruction

#### ↑ **Haemoglobin (Haemoglobinuria)**

- Urine sediment: Erythrocytes
- Serum CK: normal
- Haemolysis
  - Intravasal (haemolytic anaemia)
  - Extravasal (Haematuria)
- Hypoglycaemia

#### ↑ **Myoglobin (Myoglobinuria)**

- Urine sediment: without erythrocytes
- Serum CK: ↑
- Muscle trauma
- Seizures
- Myositis

#### **Urine sediment**

##### ↑ **Erythrocytes (Haematuria)**

- See principal symptom: Urine, bloody

##### ↑ **Leucocytes (Pyuria)**

- Pyelonephritis
- Cystitis/Urethritis
- Endometritis/Pyometra
- Prostatitis/Balanoposthitis

##### **Bacteria**

- Rods (gram negative)
  - E. coli
  - Klebsiella sp.
  - Enterobacter sp.

- *Proteus* sp.
- *Pseudomonas* sp.
- *Corynebacterium* sp.
- *Cocci* (gram positive)
  - *Staphylococcus* sp.
  - *Streptococcus* sp.
- *Spirochaetes*
  - *Leptospira* sp. [Dog]

## Fungi

- *Candida* sp.

## Parasites

- *Capillaria* sp.
- (*Dioctophyma* sp.)
- (*Dirofilaria Microfilaria* [esp Dog])

## Epithelial Cells

- Renal tubular epithelium (nephritis)
- Transitional epithelium (Cystitis/Pyelonephritis)
- Squamous epithelium
- Tumour cells

## Casts

- Hyaline casts
  - Proteinuria
- Epithelial casts → Granular casts → Wax casts
  - Tubular nephropathy
  - Interstitial nephritis
  - Amyloidosis (Wax cylinder)
- Fatty casts
  - Tubular nephropathy [esp Cat]
- Erythrocyte casts
  - Renal haemorrhage (nephritis, trauma, tumours)
- Leucocyte casts
  - Acute nephritis/ pyelonephritis

- Haemoglobin casts
  - Haemolysis

## Crystals

### pH alkaline

- Struvite (shape: coffin lid)
- Ca Carbonate (shape: spheres, discs)
- Ca Phosphate (shape: long prisms)
- Ammonium urate (shape: thornapple)
  - Dalmatians
  - Liver disease (portosystemic shunt)

### pH Acidic

- Oxalate
  - (Monohydrate. shape: dumbbell) (Dihydrate. shape: envelope)
- Cystine (shape: flat hexagonal sheets)
- Urate (shape: prisms)

## Rare Crystals

- Ethylene glycol poisoning (Ca Oxalate)
- Allopurinol
- Sulfonamides (shape: needles)
- Bilirubin (shape: brown needles)
- Cholesterol (shape: colourless flat sheets)
- Leucin (shape: spheres, discs)
- Tyrosin (shape: yellow needles)

## Further Urine Examinations

- Bence-Jones Proteins
  - Multiple myeloma/ plasmacytoma

- Cortisol/Creatinine ratio
  - Adrenal gland function test
- Bacterial culture
- SDS Gel electrophoresis
- Poisonings
  - Thallium
  - Arsenic
  - Cadmium/mercury
  - Organophosphates
  - p-Nitrophenyl

## Faecal Examination

### Faecel Examination

#### Parasites

##### Direct Faecal Examination

###### (Microscope Slide)

- Obligatory preliminary investigation

#### Flotation

- Protozoa
  - Cryptosporidium sp.
  - Giardia sp.
  - Isospora sp.
  - Toxoplasma sp. [Cat]
  - Pneumocystis sp.
  - Sarcocystis sp.
  - Balantidium sp. [Dog]
  - (Entamoeba sp.)
- Tape worms (Cestodes) (Oocysts)
  - Dipyldium sp.
  - Joyeuxiella sp.
  - Diplopylidium sp.
  - Spirometra sp.
  - Echinococcus sp.
  - Taenia sp.
  - Mesocestoides sp.
- Round worms (Nematodes) (Oocysts)
  - Toxocara sp.
  - Toxascaris sp.
  - Ancylostoma sp.
  - Uncinaria sp.

- Trichuris sp. [Dog]
- Capillaria sp.
- (Spirocercus sp. [Dog])

#### Sedimentation

- Tape worms (Oocysts)
  - Diphyllobothrium sp. [Dog]

#### Baermann-Wetzel Method

- Lung worms (Larvae)
  - Strongyloides sp. [esp Dog]
  - Filaroides sp. (rare) [Dog]
  - (Aleurostrongylus sp. [Cat])
  - (Angiostrongylus sp. [Dog])
  - (Crenosoma sp. [esp Dog])

#### Sticky Tape Preparation

- Trichuris sp. [Dog]

#### Viruses

- Parvovirus antigen
- Coronavirus antigen

#### Bacteria

- Bacterial culture
  - Salmonella sp.
  - Campylobacter sp.
  - Yersinia sp.
  - E. coli
  - Clostridium sp.
- Bacterial toxins
  - Clostridium toxin

#### Fungi

- Fungal culture

#### Digestion products

↑ Muscle Fibres and/or

**↑ Starch**

- Exocrine pancreatic insufficiency

**↑ Fat**

- Malabsorption syndrome
- Maldigestion syndrome

**↑ Lysozyme/PMN Elastase**

- Colitis
  - Colonic carcinoma
- ↑ Lactic Acid**
- Lactase deficiency

**↑ Plasma Proteins**

- Protein-losing enteropathy

**↓ Chymotrypsin**

- Exocrine pancreatic insufficiency

**↓ Elastase**

- Exocrine pancreatic insufficiency

**Blood/(Occult Blood)**

- See principal symptoms:  
Faeces, bloody

# Analysis of Body Cavity Effusions

## Thoracic Effusion

### Causes

#### Transudate

- Congestive heart failure (Right sided heart failure)
- Hypoalbuminaemia

#### Modified Transudate

- Congestive heart failure
- Tumours
- Diaphragmatic hernia
- Pancreatitis
- Autoimmune diseases
- Liver cirrhosis

#### Exudate

- Pus (Pyothorax)
  - Actinomycetes sp.
  - Nocardia sp.
  - Pasteurella sp.
  - Bacteroides sp.
  - Fusobacterium sp.
  - Pneumonia
  - Foreign body perforation
  - Oesophageal perforation
  - Tumour necrosis

- Thoracocentesis

- Blood
  - Lung lobe torsion
  - Coagulopathies
  - Trauma
  - Tumours
- Chyle
  - Congestive heart failure
  - Trauma
  - Tumour
  - Lymphangiectasia [Dog]
  - Diaphragmatic hernia
  - Lung lobe torsion
  - (Dirofilaria sp. [esp Dog])
- Other causes
  - FIP Coronavirus [Cat]
  - Tumours
  - Diaphragmatic hernia
  - Lung lobe torsion

## Abdominal Effusion

### Causes

#### Transudate

- Hypoalbuminaemia

- Protein-losing enteropathy
  - Protein-losing nephropathy
  - Liver cirrhosis/  
portosystemic shunt
  - Feline cholangiohepatitis  
[Cat]
  - Cachexia
  - Burns
  - Tumour
  - Lymph vessel obstruction
  - Liver cirrhosis
- Modified Transudate**
- Right sided heart failure
  - Pericardial disease
  - Tumours
- Exudate**
- Pus
    - Penetrating wound
    - Ruptured pyometra
    - Intestinal perforation
    - Intestinal obstruction  
(Ileus)
    - Septicaemia/ruptured  
abscess
    - Peritonitis
  - Blood
    - Traumatic organ/ blood  
vessel rupture
    - Coagulopathy
    - Splenic rupture/  
Haemangiosarcoma [Dog]
  - Chyle
    - Lymph vessel obstruction/  
rupture
    - Retroperitoneal  
haematoma
    - Lymphangiectasia [Dog]
    - Liver cirrhosis
    - Heart disease
    - Intestinal obstruction (Ileus)
- Acute pancreatitis
  - Tumour
  - Pseudochyle
    - Tumour
    - Chronic inflammation
  - Urine
    - Ruptured bladder/torn  
ureter/urethra
  - Bile
    - Gall bladder rupture
    - Liver rupture
  - Other Causes
    - Intestinal torsion/volvulus
    - Testicular torsion/  
cryptorchism
    - Gastric/intestinal rupture
    - Pancreatic rupture
    - Acute pancreatitis
    - Tumours
    - FIP [Cat]
    - Diaphragmatic hernia
    - Vena cava syndrome  
(Dirofilaria sp. [Dog])

## Pericardial Effusion

### Causes

#### Modified Transudate

- Congestive heart failure
- Uraemia
- Hypoalbuminaemia
- Cardiac arrhythmias
- Pericardio-diaphragmatic  
hernia

#### Exudate

- Pus (Pericarditis)
  - Canine distemper virus  
[Dog]
  - FIP Coronavirus [Cat]
  - Leptospira sp. [Dog]

- Actinomyces sp.
- Nocardia sp.
- Mycobacterium sp.
- Toxoplasma sp.
- Pasteurella sp.
- Streptococcus spp.
- Staphylococcus spp.
- E. coli
- Cryptococcus sp.  
[Cat]
- Tumours
- Blood
  - Atrial rupture
  - Foreign body
  - Haemangiosarcoma  
[esp Dog]
  - Coagulopathy
  - Pericarditis

## Cytological Malignancy Criteria

### Changes in Cell Shape

- Cell pleomorphism (Variable cell shape)
  - Atypical
  - Loss of differentiation
  - Heterotypical

### Nuclear Changes

- Polynuclear cells
- Macrocaryosis
  - ↑ nucleus
  - ↑ nucleus cytoplasm ratio
- Anisocaryosis (nuclei of variable size/shape)
- Hyperchromasia of the nuclear wall
- Polyploidy
- Atypical mitoses

### Changes of the Nucleoli

- ↑ Nucleoli number
- Macronucleosis (↑ Nucleoli size)
- Anisonucleosis (Nucleoli of variable size/shape)

### Cytoplasmatic Changes

- Atypical size
  - expansion
  - shape
  - contents
  - staining

## Distinguishing Features of Body Cavity Effusion

Test	Transudate	Mod. Transudate	Exudate	Blood	Chyle
Colour	clear	cloudy	cloudy yellow/brown (FIP/ bile)	bloody	milky
Erythrocytes	(-)	(-/+)	(+)	+	(+)
Thrombocytes	(-)	(-)	(-)	+	(-)
Leucocytes/ $\mu$ l	$\downarrow (< 1000)$ (Lymph)	$\uparrow (< 7000)$ (Lymph/Neutro)	$\uparrow (> 7000)$ (Neutro) $\downarrow (< 5000)$ (FIP)	Like blood	$\downarrow (< 1000)$ (Mono/Lymph)
Tumour cells	(-)	(-/+)	(-/+)	(-/+)	(-)
Bacterial culture	(-)	(-)	(+)	(-)	(-)
Specific gravity	< 1,018	1,018–1,025	$\uparrow (> 1,025)$	$\uparrow (> 1,025)$	$\uparrow (> 1,025)$
Protein (g/dl) (relevant only with thoracic effusion)	$\downarrow (< 2,5)$	2,5–5,0	$\uparrow (> 2,5)$	$\uparrow (> 2,5)$	$\uparrow (> 2,5)$
A/G Ratio	$\uparrow (> 0,6)$	$\uparrow (> 0,6)$	$\downarrow (< 0,6)$ (FIP)	$\uparrow (> 0,6)$	$\uparrow (> 0,6)$
Rivalta test (Cat)	(-)	(-)	(+) (FIP)	(-)	(-)
LDH (U/l)	$\downarrow (< 200)$	$\downarrow (< 200)$ (Heart disease)	$\uparrow (> 1600)$ (FIP) $\uparrow (> 200)$ (Neoplasia)	$\uparrow/\downarrow$	$\downarrow (< 200)$

Bilirubin	< Serum	< Serum	↑ (> Serum) (Gall bladder rupture)	↑/↓	< Serum
Creatinine	< Serum	< Serum	↑ (> Serum) (Urinary tract rupture)	< Serum	< Serum
Amylase/Lipase	< Serum	< Serum	↑ (> Serum) (Pancreatic rupture /Pancreatitis)	< Serum	< Serum
Cholesterol	< Serum	< Serum	↑ (> Serum) (Pseudochyle)	< Serum	< Serum
Triglycerides	< Serum	< Serum	< Serum	< Serum	↑ (> Serum)
Ether clearance test	not relevant	not relevant	(-)	not relevant	(+) (clearance)

## Liquor Analysis

Causes	Colour	Pressure H <sub>2</sub> O	Cells(/µl)	Protein (g/dl)	Globulin (Pandy/ Nonne-Apelt)	Glucose (%) Serum
Normal	clear	5–15 cm H <sub>2</sub> O	< 5	< 1	(–)	< 60
Acute trauma/ haemorrhage	clear/bloody	N/↑	↑ (Ery)	N/↑	(+)	N
Viral	clear/ cloudy (FIP)	N/↑	↑ (Lymph, Neutro)	N/↑(FIP)	(-/+) (FIP)	N/↓
Meningoencephalitis	cloudy	↑	↑ (Neutro)	↑	++	↓
Bacterial	clear	↑	↑ (Ery, Lymph, Mono)	↑	(+)	↓
Meningoencephalitis	clear/cloudy	↑	↑ (Ery, Neutro)	↑	(+)	↓
Rickettsial	clear/bloody	↑	↑ (Ery, Eos, Neutro)	↑	(+)	↓
Meningoencephalitis	clear/bloody	↑	↑ (Ery, Eos, Lympho)	↑	++	N
Parasitic	clear/bloody	↑	↑ (Ery, Eos, Lympho)	↑	(-/+)	N/↓
Degenerative Diseases	clear	N	N	N/↑	(-/+)	N

## Synovial Analysis

Causes	Colour	Viscosity	Mucin clot test	Spontaneous clotting	Leucocytes (/µl)	Glucose (% Serum)	Culture	Rheuma factor
Normal	clear/ light yellow	↑	fast	(-)	< 200	> 90	(-)	
Degenerative	clear/cloudy	↑	solid	(-/+)	< 5000	N	(-)	(-)
Arthrosis	yellow							
Immuneractive	clear/cloudy	↓	friable	(+)	↑ (> 5000)	N	(-)	(-/+)
Arthritis	yellow/red							
Septic Arthritis	clear/cloudy yellow/red	↓	friable	(+)	↑ (> 100 000)	↓ (< 50)	(+)	(-)
Trauma	clear/cloudy red	↓	solid	(-)	< 5000	N	(-)	(-)

Further examination parameters: Tumour cytology, electrophoresis, Lupus erythematosus cytology, synovial biopsy, Lyme Borrelia antigen (PCR)

## Analysis of Tracheobronchial Secretion (TBS)

Cytology	Culture	Evaluation
Physiological cell count		
<ul style="list-style-type: none"><li>• Low in cells<ul style="list-style-type: none"><li>– ciliated epithelium</li><li>– goblet cells</li></ul></li><li>• ↓ Mucous</li></ul>	Physiological flora	Physiological

# Endocrine Function Tests

## Adrenal Gland Function

### Dexamethasone Suppression Test (Low Dose Screening Test)

#### Indication

- Polydipsia/Polyuria with suspicion of hypercortisolism (Cushing's disease) [esp Dog]

#### Test Procedure in the Dog

- Base cortisol level (Plasma/Serum)
- Dexamethasone 0,01 mg/kg BW i. v.

- Cortisol suppression level after 4hrs (plasma/serum)
- Cortisol suppression level after 8hrs (plasma/serum)

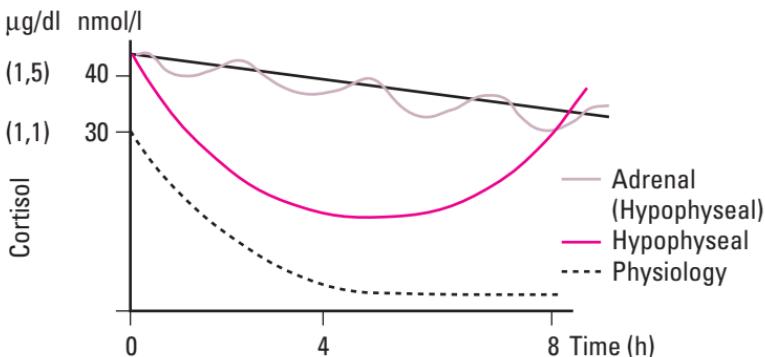

#### Test Procedure in the Cat

- Base cortisol level (plasma/serum)
- Dexamethasone 0,1 mg/kg BW i. v.
- Cortisol suppression level after 8hrs (plasma/serum)

#### Evaluation

(see table below)

Base level Suppression level (4 h)	Suppression level (8 h)	Evaluation
N/↑ N/↑ (< 50%)	↑ (> 10 nmol/l or ng/ml)	Cushing's disease (adrenal or pituitary)
N/↑ ↓ (50%, < 10 nmol/l or ng/ml)	↑ (> 10 nmol/l or ng/ml)	Pituitary Cushing's disease Physiological
N/↓ ↓ (50%, < 10 nmol/l or ng/ml)	↓ (< 10 nmol/l or ng/ml)	Iatrogenic Cushing's disease

## Dexamethasone Suppression Test (High Dose Screening Test)

### Indication

- Differentiation between adrenal and pituitary hypercortisolism (Cushing's disease) in the dog

### Test Procedure

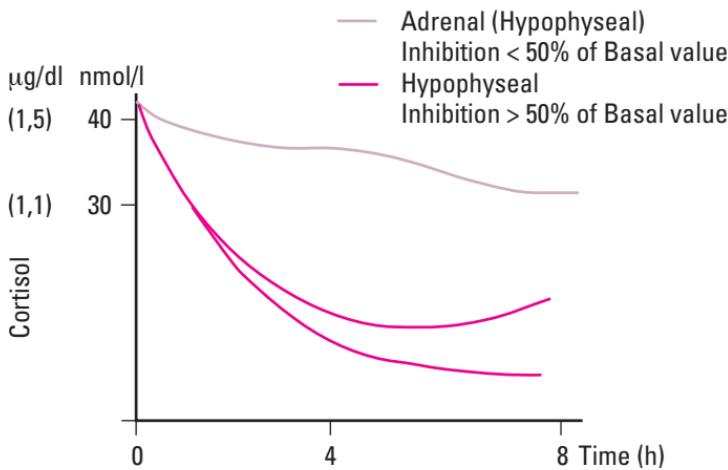

- Base cortisol level (plasma/serum)

- Dexamethasone 0,1 mg/kg BW i. v./i. m.
- Cortisol suppression level after 3 h/4 h (plasma/serum)
- Cortisol suppression level after 8 h (plasma/serum)

### Evaluation

(see table below)

Base level	Suppression level (4 h)	Suppression level (8 h)	Evaluation
N/↑	↑ (< 50%)	↑ (< 50%)	Cushing's disease (esp adrenal/[pituitary])
N/↑	↓ (> 50%)	↑	Pituitary Cushing's disease
N/↑	↑	↓ (> 50%)	Pituitary Cushing's disease
N/↑	↓ (> 50%)	↓ (> 50%)	Pituitary Cushing's disease

## ACTH Stimulation Test

### Indication

- Differentiation between spontaneous and iatrogenic hypercortisolism (Cushing's disease)
- Hypocortisolism (Addison's disease) suspicion
- Therapeutic control with hypercortisolism (Cushing's disease)

### Test Procedure

- Base cortisol level (plasma/serum)

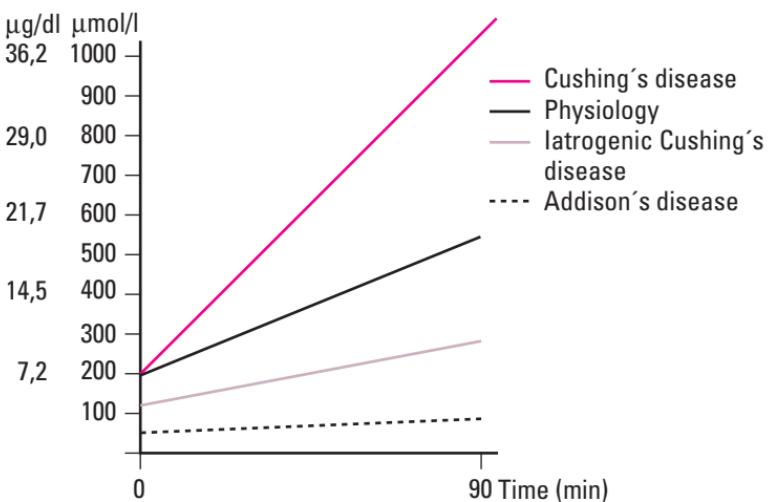

- Dog: ACTH (Synacten®) 0,25 mg/Dog (25 IU) i. v./i. m.  
Cat: ACTH (Synacten®) 0,125 mg/Cat (12,5 IU) i. v./i. m.
- Cortisol stimulation level after 60 min (plasma/serum)

### Evaluation

Cushing's disease: Stimulation value > 150 nmol/l or ng/ml or > 3 times the base parameters

Trilostan therapeutic control:  
15–55 nmol/l or ng/ml (see table below)

Base level	Stimulation level (90 min)	Evaluation
N/↑	↑ (> × 5)	Spontaneous Cushing's disease
N/↓		Iatrogenic Cushing's disease
N/↓	↓	
N/↑/↓	↑ (< × 5)	Hypocortisolism (Addison's disease)

## Cortisol/Creatinine Ratio

### Indication

- Suspicion of hypercortisolism (Cushing's disease)
- Differentiation between adrenal Cushing's disease and pituitary Cushing's disease

### Calculation

- Urine Cortisol ( $\mu\text{mol/l}$ )
  - Urine Creatinine ( $\mu\text{mol/l}$ )

### Test Procedure

- Cortisol/Creatinine base level (morning urine on the 1<sup>st</sup> day)
- Cortisol/Creatinine base level (Morning urine on the 2<sup>nd</sup> day)
- Dexamethasone 0,1 mg/kg BW p. o.  $3 \times$  in 8 hour intervals (2<sup>nd</sup> day)
- Cortisol/Creatinine Suppression level (morning urine on the 3<sup>rd</sup> day)

### Evaluation

(see table below)

Base level 1 <sup>st</sup> day	Base level 2 <sup>nd</sup> day	Suppression level 3 <sup>rd</sup> day	Evaluation
N/↑	↑		Cushing's disease (adrenal or pituitary)
N/↑	↑	↑	Cushing's disease (adrenal/ [pituitary])
N/↑	↑	↓ (< 50%)	Pituitary Cushing's disease

## Thyroid Function

### K Value

### Indication

- Hypothyroidism

### Calculation (12h Fasted Parameters)

$$k = 0,7 \times fT_4 \text{ (pmol/l)}$$

- Cholesterol ( $\text{mmol/l}$ )

### Evaluation

$K < -4$  = Hypothyroidism

### TRH Stimulation Test

### Indication

- Suspicion of hypothyroidism [Dog]

### Test Procedure

- $T_4/fT_4$  base level (plasma/serum)
- TRH (Thyreoliberin<sup>®</sup>) 200  $\mu\text{g}/\text{animal i. v.}$

3.  $T_4/fT_4$  stimulation level  
(90 min) (plasma/serum)  
4.  $T_4/fT_4$  stimulation  
level (3 h)

**Evaluation**  
(see table below)

Base level	Suppression level (3 h)	Evaluation
N/↓	↑ (< 50%)	Hypothyroidism
N/↓	↑ (> 50%)	Physiological

## TSH Stimulation Test

### Indication

- Suspicion of hypothyroidism [Dog]
- Reagent currently unavailable

### Test Procedure

- $T_4$  base level (plasma/serum)

2. TSH 0,1 IE/kg BW i. v.
3.  $T_4$  stimulation level (4 h/6 h) (plasma/serum)

**Evaluation**  
(see table below)

Base level	Stimulation level (4 h/6 h)	Evaluation
N/↓	↑ (< 3 µg/dl = 35 nmol/l)	Hypothyroidism
N/↓	↑ (> 3 µg/dl)	Physiological

## $T_3$ Suppression test

### Indication

- Suspicion of hyperthyroidism [Cat]

### Test Procedure

- $T_4/fT_4$  base level (plasma/serum)

2.  $T_3$  (Thybon®) 25 µg/Cat p. o.  
6 times in 8hr intervals
3.  $T_4/fT_4$  suppression level  
ca. 2–4 h after final  $T_3$   
administration (plasma/serum)

**Evaluation**  
(see table below)

Base level	Suppression level (4 h)	Evaluation
N/↑	↓ (> 50%)	Physiological
N/↑	N /↓ (< 50%)	Hyperthyroidism

## Gonade Function

### HCG Stimulation Test

#### Indication

- Evidence of hormone producing gonades (ie retained ovarian tissue after incomplete removal, cryptorchism)

#### Test Procedure

1. Testosterone or Oestradiol Base value (Serum)
2. HCG (Ovogest®) 500 I.E. i. v.
3. Stimulation level after 60 min

#### Evaluation

- Male dog: Testosterone stimulation level > 1 ng/ml with cryptorchism
- Bitch: Oestradiol stimulation level > 15 ng/ml with retained ovarian tissue

### GnRH Stimulation Test

#### Indication

- Evidence of hormone producing gonades (ie retained ovarian tissue after incomplete removal, cryptorchism)

#### Test Procedure

1. Testosterone or Oestradiol base level (serum)
2. Buserelin (Receptal®) 0,32 µg/ animal i. v.
3. Stimulation level after 1hr in the male dog and 3 hours in the bitch

#### Evaluation

- Male dog: Testosterone stimulation level > 1 ng/ml with cryptorchism
- Bitch: Oestradiol stimulation level > 15 ng/ml with retained ovarian tissue

## Further Function Tests

### STH Stimulation Test

#### Indication

- Suspected STH Deficiency [Dog]
  - Diabetes mellitus (Type II)
  - Hypophyseal dwarfism
  - Dermatosis

#### Test Procedure

1. STH base level (serum)
2. Xylazine 100 µg (0,01 mg)/kg BW i. v. or Clonidin 10–30 µg (0,001–0,003 mg)/kg BW
3. STH stimulation parameters (30–60–90 min) (freeze serum after sampling)

#### Evaluation

(see table below)

Base level	Stimulation Parameters	Evaluation
N /↓	N /↓	STH deficiency Physiological
N /↓	↑	

## Diabetes Insipidus Fluid Deprivation Test

### Indication

- Polydipsia/Polyuria with suspected Diabetes insipidus

### Test Procedure

- Specific gravity/ osmolality (urine)

- 24 h fluid deprivation
- Specific gravity/ osmolality (urine)
  - Termination in case of dehydration > 5 % body weight or azotaemia

### Evaluation

(see table below) (Extreme simplification)

Base level	Final level (Specific gravity)	Final level (Urine osmolality)	Evaluation
↓	↑ > 1,030	> 3 × Serum	Physiological
	↓ < 1,030	< 3 × Serum	Diabetes insipidus

## Bile Acid Stimulation Test

### Indication

- esp portosystemic shunt

### Test Procedure

- Bile acid fasting level (serum)

- Feed 100 g meat + 5 g fat/ 10 kg BW postprandial bile acid level after 2 h

### Evaluation

- Postprandial bile acid level > 50 µmol/l with portosystemic shunt

# 18 Appendix: Normal Laboratory Values

## Normal Haematological Values

Parameter	Unit	Dog	Cat
Haematocrit (Hct)	% (l/l)	44–52 (0,44–0,52)	30–45 (0,30–0,45)
Erythrocyte number	$\times 10^6/\mu\text{l}$	5,5–8,5	5,0–10,0
Haemoglobin (Hb)	g/dl (mmol/l)	15,0–19,0 (9,3–11,8)	9,0–15,0 (5,6–9,3)
Mean corpuscular volume (MCV)	$\mu\text{l}/\mu\text{m}^3$	67–80	40–55
Mean corpuscular haemoglobin concentration (MCHC)	g/dl	32–36	30–36
Reticulocyte number	/1000	5–10	5–20
Reticulocyte Index (RI)	%	45	40
Leucocyte number	$/\mu\text{l}$	6000–12 000	6000–11 000
Neutrophil granulocytes, banded	%	0–4	0–4
Neutrophil granulocytes, segmented	%	50–75	60–75
Eosinophil granulocytes	%	0–4	0–4
Lymphocytes	%	13–30	15–30
Monocytes	%	0–4	0–4
Basophil granulocytes	%	0–1	0–1
Lymphocytes	%	13–30	15–30
Monocytes	%	0–4	0–4

## Normal Haematological Values (Contd)

Parameter	Unit	Dog	Cat
Blood Sedimentation Rate (BSR) Wester-Gren Method (vertical)	mm	0–2 (1 h) 1–4 (2 h)	0–2 (1 h)
DeHag Method (vertical)			2–10 (2 h)

## Normal Blood Chemistry Values

Parameter	Unit	Dog	Cat
Total Protein (TP)	g/dl (g/l)	6,0–8,0 (60–80)	6,0–8,0 (60–80)
Albumin	g/dl (g/l)	2,5–4,0 (25–40)	2,5–4,0 (25–40)
Globulin	mg/dl (mg/l)	2,4–4,5 (24–45)	2,8–5,5 (28–55)
A/G Ratio		0,6–1,1	0,6–1,2
Blood glucose	mg/dl (mmol/l)	70–120 (3,9–6,7)	70–150 (3,9–8,3)
Fructosamine	µmol/l	up to 340	up to 340
Glutamate Pyruvate Transaminase (GPT)/Alanine Amino-transferase (ALT)	U/l	up to 55	up to 70
Alkaline Phosphatase (AP)	U/l	Adult up to 110	Adult up to 140
Bilirubin (total bilirubin)	mg/dl (µmol/l)	0,2 (3,4)	0,2 (3,4)
Ammonium	µg/dl (µmol/l)	up to 100 (up to 59)	up to 100 (up to 59)
Glutamate Oxalo-acetate Transaminase (GOT)/Aspartate Amino-transferase (AST)	U/l	up to 25	up to 30

## Normal Blood Chemistry Values (Contd)

Parameter	Unit	Dog	Cat
Gamma Glutamyl Transferase (GGT)	U/l	up to 6	up to 6
Lactate Dehydrogenase (LDH)	U/l	up to 130	up to 200
Bile Acids	µmol/l	up to 20 (Fasting value)	up to 20 (Fasting value)
Triglycerides	mg/dl (mmol/l)	50–100 (0,6–1,2)	50–100 (0,6–1,2)
Cholesterol	mg/dl (mmol/l)	100–300 (2,5–8,0)	75–150 (2,0–4,0)
Acetylcholinesterase	kU/l	1,5–3,0	1,0–3,0
Gastrin	ng/l	25–110	–
Folic acid	ng/ml	3,5–11,0	3,2–34,0
Cobalamin (Vitamin B12)	pg/ml	300–800	120–1200
Amylase	U/l	up to 1700	up to 1800
Lipase	U/l	up to 300	up to 280
TLI Test	µg/l	5–35	17–48
Urea	mg/dl (mmol/l)	20–50 (3,3–8,3)	30–65 (5,0–11,0)
Creatinine (Crea)	mg/dl (µmol/l)	up to 1,5 (up to 130)	up to 2,0 (up to 170)
Creatine Kinase (CK)	U/l	up to 90	up to 130
Thyroxin (T <sub>4</sub> )	µg/dl (nmol/l)	1,3–3,6 (17–46)	0,9–4,0 (12–52)
Free Thyroxin (fT <sub>4</sub> )	ng/dl	0,6–3,7	0,5–2,6
Insulin	mU/l	9–32	4–20
Insulin/Glucose Ratio	Insulin (mU/l): Glucose (mg/dl)	Up to 0,3 (Fasting value)	Up to 0,3 (Fasting value)

## Electrolytes, Normal Values

Parameter	Unit	Dog	Cat
Sodium (Na)	mmol/l	140–155	145–158
Potassium (K)	mmol/l	3,5–5,1	3,0–4,8
Chloride (Cl)	mmol/l	96–113	110–130
Calcium (Ca)	mmol/l	2,3–3,0	2,3–3,0
Phosphate (P)	mmol/l	Adult 0,8–1,6	Adult 0,8–1,9
Magnesium (Mg)	mmol/l	0,6–1,3	0,6–1,3

## Blood Gas Analysis (BGA), Normal Values

Parameter	Unit	Dog	Cat
pH		7,36–7,44	7,36–7,44
pCO <sub>2</sub>	kPa	4,8–5,3	3,7–4,3
pO <sub>2</sub>	kPa	11,3–12,7	11,3–12,7
Standard bicarbonate	mmol/l	22–26 +2,5	22–26 +2,5
BE (StBicarbonate–24)		to -2,5	to -2,5
Anion gap	mmol/l	8–12	8–12

## Serum Electrophoresis, Normal Values

Parameter	Unit	Dog	Cat
Albumin	g/dl (%)	2,2–4,4 (47–59)	2,6–5,6 (45–60)
α <sub>1</sub> -Globulin	g/dl (%)	0,2–0,5 (4–7)	0,2–1,3 (4–14)
α2-Globulin	g/dl (%)	0,3–0,9 (5–12)	0,4–1,1 (7–12)
β <sub>1</sub> -Globulin	g/dl (%)	0,5–1,4 (11–20)	1,1–1,4 (11–15)
γ-Globulin	g/dl (%)	0,4–1,4 (8–18)	0,6–2,6 (10–28)

## Coagulation, Normal Values

Parameter	Unit	Dog	Cat
Thrombocyte number	$\times 10^9/l$	150–500	180–550
Prothrombin time (PT)	s	7–10	7–12
Thromboplastin time (Quick)	%	75–130	60–150
(Activated) partial Thromboplastin time (PTT/aPTT)	s	Up to 24	Up to 22
Fibrin Degradation Products (FDP)	Laboratory dependent	Laboratory dependent	Laboratory dependent
Bleeding time	min	up to 6	up to 3

## Urinalysis, Normal Values

Parameter	Unit	Dog	Cat
Urinary output/volume	ml/kg BW/h (ml/kg BW/d)	1–2 (20–40)	1–2 (20–30)
Specific gravity		>1,015	>1,015
Urine colour		pale to yellow	pale to strong yellow
pH		5,5–7,0	5,5–7,0
Protein	mg/dl	negative to 30	negative to 30
Glucose		negative	negative
Ketones		negative	negative
Bilirubin		up to (+)	negative
Haemoglobin/Myoglobin		negative	negative
Urine sediment		occasional epithelial cells	occasional epithelial cells

- Coombs test (direct) 346
- insulin antibodies 347
- microscope slide autoagglutination test 347
- rheumatoid factor (Rose-Waaler test) 346
- thyreoglobulin antibody test 347
- liquor analysis 368
- microbial serology 347–50
- moleculargenetic examinations 350–3  
 normal values  
   blood chemistry 382–3  
   blood gas analysis (BGA) 384  
   coagulation 385  
   electrolytes 384  
   haematological 381–2  
   serum electrophoresis 384  
   urinalysis 385
- serum electrophoresis 344–5
- synovial analysis 369
- tracheobronchial secretion (TBS) analysis 370–2
- urinalysis 358–62  
   further urine examinations 361–2  
   specific gravity 358

- laboratory findings (*cont.*)
- urinalysis (*cont.*)
    - urinary output/volume 358
    - urine chemistry 359–60
    - urine colour 358–9
    - urine sediment 360–1
  - vaginal cytology 373
  - lymph node enlargement, peripheral 38–9
    - generalised lymphadenopathy 38–9
    - localised lymphadenopathy 39
  - mucous membrane colour, abnormal
    - blue 43
    - pallor 43
    - red 43
    - yellow 43
  - neurological symptoms 184–215
    - ataxia 184–90
      - central vestibular disorder 186
      - cerebellar causes 187
      - neuromuscular 188–9
      - other causes 189
    - peripheral vestibular disorder 185–6
      - spinal 187–8
    - coma 193–6
      - cerebral 193–4
      - extracerebral 194
    - head tilt 196–9
      - central vestibular disturbance 197–8
      - peripheral vestibular disturbance 196–7
    - hearing loss/deafness 191–2
      - congenital 192
      - middle ear tumours 191
      - other causes 192
      - otitis media/interna 191
    - nystagmus 199
    - paralysis 204–12
      - hemiparesis (one fore limb/one hind limb ipsilateral) 208–9
      - monoparesis (one fore limb) 204–5
      - monoparesis (one hind limb) 205
      - paraparesis (both hind limbs) 205–6
      - Schiff-Sherrington phenomenon 206
      - tetraparesis (both fore limbs/both hind limbs) 206–8
    - seizures 200–4
      - cerebral 201–2
      - extracerebral 202

phases 200

tremor 212–15

obesity 4

oedema, subcutaneous 40–1

generalised 40–1

localised 40

ophthalmological symptoms 230–49

anisocoria 230–2

unilateral miosis 231

unilateral mydriasis 231

cataract 238–41

anterior chamber 239–40

anterior lens 240

cornea 238–9

enophthalmos 241–2

exophthalmos 242

loss of eyesight/blindness 244–8

bilateral 245–7

unilateral 245

ocular discharge 233–4

tear flow disturbances 233–4

tear production 233

prolapse of nictitating membrane 243–4

bilateral 243–4

unilateral 243

reddening of eye 234–8

conjunctival 235–6

corneal 237

eyelids 235

glaucoma 236–7

ocular chamber 237

scleral 236

strabismus 248–9

bilateral 249

unilateral 248

orthopaedic symptoms 216–29

lameness of fore limb 216–21

carpus 219

elbow 218–19

fore foot 219–20

shoulder 217–18

lameness of hind limb 221–5

hind foot 225

hip 222–3

knee 223–4

tarsal joint 224–5

lameness in multiple limbs 225–9

bone disease 226–7

- joint disease 227–8  
 neuromuscular disease 228–9  
 spinal disease 226  
 tendon disease 229  
 otological symptoms 250–2
- paediatrics 288–300  
 cardiac diseases 289  
 central nervous diseases 292  
 coagulopathies 299–300  
 gastrointestinal, liver, pancreatic diseases 289–90  
 immune system diseases 299  
 infectious diseases 293–8  
     kittens 296–8  
     puppies 293–6  
 metabolic diseases 298–9  
 muscular/bone diseases 290–1  
 ocular diseases 293  
 respiratory diseases 289  
 skin diseases 291–2  
 spinal diseases 292–3  
 urinary tract diseases 290
- performance insufficiency 31–8  
 cardiovascular 31–3  
 metabolic 36  
 neuromuscular 36–7  
 other causes 37  
 pleural/mediastinal 33–4  
 pulmonary 34–6
- poisoning *see* toxicological symptoms
- pruritis 253–6
- pyrexia 21, 22
- reproductive tract 162–83  
 abnormal cycle 182–3  
     interoestrus 182  
     oestrus 182  
 dystocia 167–8  
     abnormal parturition 167  
     foetal factors 168  
     maternal factors 168  
     physiological parturition 167  
 fertility disorders 164–7  
     female causes 165  
     gestation period 164  
     male causes 165  
     mating date 164  
     ovulation 164
- pregnancy diagnosis 164  
 mammary discharge 170–1  
     haemorrhagic discharge 170–1  
     milk secretion (galactorrhoea) 170  
     purulent discharge 170  
 mammary enlargement 171–3  
     female animal 172  
     male animal 172  
 miscarriage/foetal death 162–4  
     foetal factors 163  
     maternal factors 163
- penile prolapse 173–4  
     paraphimosis 173  
     priapismus 173
- postpartal complications 174–6  
     in the mother 174  
     in the neonate 174–5
- preputial discharge 176–8  
     haemorrhagic 177  
     purulent 177  
     urinary incontinence 177–8
- testicular enlargement 169–70
- vaginal discharge 179–80  
     haemorrhagic 179–80  
     purulent 179  
     seromucous 179  
     urinary incontinence 180  
     vaginal prolapse 181
- respiratory symptoms 71–96  
 cough 82–5  
     dry/tickly 84  
     productive 82–4
- dyspnoea 75–82  
     endonasal 75–6  
     laryngeal 76  
     other causes 80–1
- pleural/mediastinal 79–80  
 pulmonary 77–9  
 tracheal 76–7
- epistaxis 92–5  
     bilateral 92–4  
     unilateral 92
- lung sounds 86–7  
     bronchial respiratory 86  
     rattling 86  
     vesicular respiratory 86
- nasal discharge (rhinorrhoea) 88–91  
     bilateral 89–91  
     unilateral 88–9

- respiratory symptoms (*cont.*)  
 reverse sneezing 95–6  
 sounds (stridor and stertor) 71–4  
   endonasal 72  
   laryngeal 72–3  
   tracheal 73–4
- scratch wounds 17
- shock 43–6  
   anaphylactic 45  
   cardiogenic 45–6  
   hypovolaemic 44  
   septic/endotoxic 44
- sleep disturbances 41–3  
   cataplexy 42  
   coma 42  
   hypersomnia 41, 42  
   insomnia 41, 42  
   narcolepsy 42  
   sleep attacks 41, 42  
   syncope 41
- toxological symptoms 266–84  
   anaemia, aplastic 267–8  
   anaemia, haemolytic 268  
   anaemia/methaemoglobinæmia 268–9  
   anaphylaxis 269  
   ataxia 269–70  
   cardiac arrhythmias, bradycardic 275  
   cardiac arrhythmias, tachycardic 276  
   central nervous depression 282–3  
   central nervous excitation 283  
   coagulopathies 271–2  
   coma 277  
   cyanosis 283–4  
   dyspnoea/respiratory distress 270–1  
   hair loss 274  
   hepatic damage 279  
   hypersalivation 276–7  
   intestinal spasms 272  
   miosis 280  
   miscarriage 267  
   mydriasis 280  
   paresis/paralysis 281  
   renal damage 280–1
- seizures 277–9  
 skin reactions, allergic 274–5  
 tremor 281–2  
 vomitus 272–3  
 vomitus and diarrhoea 273–4
- urological symptoms 143–61  
   oliguria/anuria 154–7  
     postrenal 156  
     prerenal 154  
     renal 154–6  
   polydipsia/polyuria 157–60  
     extrarenal 158–9  
     renal 158  
   renomegaly 160–1  
     bilateral 160–1  
     unilateral 160  
   urinary incontinence/retention 150–2  
     empty bladder 151  
     full bladder 150–1, 152  
   urinary tract infections, chronic  
     recurrence 153–4  
   reinfection/superinfection 153  
   therapeutic failure 153
- urinary urgency  
   dysuria, stranguria, tenesmus vesicae  
     147  
   inflammatory 148–9  
   obstructive 148  
   other causes 149  
   pollakisuria 147
- urine, bloody 143–7  
   coagulopathies 144–6  
   haemoglobinuria 146  
   haemorrhage of genital tract 144  
   myoglobinuria 146–7  
   renal haemorrhage 143–4  
   ureteral, bladder, urethral haemorrhage  
     144
- zoonoses 310–12  
   cat+human 311–12  
   dog+human 310–11  
   domestic birds+human 312  
   rodents+human 312
